RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Environmental Interest/Information System

AFS (Aerometric Information Retrieval System (AIRS) Facility Subsystem) replaces the former Compliance Data System (CDS), the National Emission Data System (NEDS), and the Storage and Retrieval of Aerometric Data (SAROAD). AIRS is the national repository for information concerning airborne pollution in the United States. AFS is used to track emissions and compliance data from industrial plants. AFS data are utilized by states to prepare State Implementation Plans to comply with regulatory programs and by EPA as an input for the estimation of total national emissions. AFS is undergoing a major redesign to support facility operating permits required under Title V of the Clean Air Act.

CEDS (Virginia - Comprehensive Environmental Data System) is the Department of Environmental Quality's (DEQ) electronic data system for maintaining databases on sources of pollutants in all media.

US EPA Air Quality System (AQS) contains ambient air pollution data collected by EPA, State, Local, and Tribal air pollution control agencies from thousands of monitoring stations.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Environmental Interest/Information System

ICIS (Integrated Compliance Information System) is the Integrated Compliance Information System and provides a database that, when complete, will contain integrated Enforcement and Compliance information across most of EPA's programs. The vision for ICIS is to replace EPA's independent databases that contain Enforcement data with a single repository for that information. Currently, ICIS contains all Federal Administrative and Judicial enforcement actions. This information is maintained in ICIS by EPA in the Regional offices and it Headquarters. A future release of ICIS will replace the Permit Compliance System (PCS) which supports the NPDES and will integrate that information with Federal actions already in the system. ICIS also has the capability to track other activities occurring in the Region that support Compliance and Enforcement programs. These include; Incident Tracking, Compliance Assistance, and Compliance Monitoring.

Environmental Interest/Information System
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Environmental Interest/Information System

AFS (Aerometric Information Retrieval System (AIRS) Facility Subsystem) replaces the former Compliance Data System (CDS), the National Emission Data System (NEDS), and the Storage and Retrieval of Aerometric Data (SAROAD). AIRS is the national repository for information concerning airborne pollution in the United States. AFS is used to track emissions and compliance data from industrial plants. AFS data are utilized by states to prepare State Implementation Plans to comply with regulatory programs and by EPA as an input for the estimation of total national emissions. AFS is undergoing a major redesign to support facility operating permits required under Title V of the Clean Air Act.

CEDS (Virginia - Comprehensive Environmental Data System) is the Department of Environmental Quality's (DEQ) electronic data system for maintaining databases on sources of pollutants in all media.

US National Pollutant Discharge Elimination System (NPDES) module of the Compliance Information System (ICIS) tracks surface water permits issued under the Clean Water Act. Under NPDES, all facilities that discharge pollutants from any point source into waters of the United States are required to obtain a permit. The permit will likely contain limits on what can be discharged, impose monitoring and reporting requirements, and include other provisions to ensure that the discharge does not adversely affect water quality.

AIR MINOR

US EPA Risk Management Plan (RMP) database stores the risk management plans reported by companies that handle, manufacture, use, or store certain flammable or toxic substances, as required under section 112(r) of the Clean Air Act (CAA).

ICIS (Integrated Compliance Information System) is the Integrated Compliance Information System and provides a database that, when complete, will contain integrated Enforcement and Compliance information across most of EPA's programs. The vision for ICIS is to replace EPA's independent databases that contain Enforcement data with a single repository for that information. Currently, ICIS contains all Federal Administrative and Judicial enforcement actions. This information is maintained in ICIS by EPA in the Regional offices and it Headquarters. A future release of ICIS will replace the Permit Compliance System (PCS) which supports the NPDES and will integrate that information with Federal actions already in the system. ICIS also has the capability to track other activities occurring in the Region that support Compliance and Enforcement programs. These include; Incident Tracking, Compliance Assistance, and Compliance Monitoring.

OSHA ESTABLISHMENT

US EPA Risk Management Plan (RMP) database stores the risk management plans reported by companies that handle, manufacture, use, or store certain flammable or toxic substances, as required under section 112(r) of the Clean Air Act (CAA).

ICIS (Integrated Compliance Information System) is the Integrated Compliance Information System and provides a database that, when complete, will contain integrated Enforcement and Compliance information across most of EPA's programs. The vision for ICIS is to replace EPA's independent databases that contain Enforcement data with a single repository for that information. Currently, ICIS contains all Federal Administrative and Judicial enforcement actions. This information is maintained in ICIS by EPA in the Regional offices and it Headquarters. A future release of ICIS will replace the Permit Compliance System (PCS) which supports the NPDES and will integrate that information with Federal actions already in the system. ICIS also has the capability to track other activities occurring in the Region

that support Compliance and Enforcement programs. These include; Incident Tracking, Compliance Assistance, and Compliance Monitoring.

ICIS (Integrated Compliance Information System) is the Integrated Compliance Information System and provides a database that, when complete, will contain integrated Enforcement and Compliance information across most of EPA's programs. The vision for ICIS is to replace EPA's independent databases that contain Enforcement data with a single repository for that information. Currently, ICIS contains all Federal Administrative and Judicial enforcement actions. This information is maintained in ICIS by EPA in the Regional offices and it Headquarters. A future release of ICIS will replace the Permit Compliance System (PCS) which supports the NPDES and will integrate that information with Federal actions already in the system. ICIS also has the capability to track other activities occurring in the Region that support Compliance and Enforcement programs. These include; Incident Tracking, Compliance Assistance, and Compliance Monitoring.

Biennial Reports:

Last Biennial Reporting Year: 2017

Annual Waste Handled:

Waste code: D001
Waste name: IGNITABLE HAZARDOUS WASTES ARE THOSE WASTES WHICH HAVE A FLASHPOINT OF LESS THAN 140 DEGREES FAHRENHEIT AS DETERMINED BY A PENSKY-MARTENS CLOSED CUP FLASH POINT TESTER. ANOTHER METHOD OF DETERMINING THE FLASH POINT OF A WASTE IS TO REVIEW THE MATERIAL SAFETY DATA SHEET, WHICH CAN BE OBTAINED FROM THE MANUFACTURER OR DISTRIBUTOR OF THE MATERIAL. LACQUER THINNER IS AN EXAMPLE OF A COMMONLY USED SOLVENT WHICH WOULD BE CONSIDERED AS IGNITABLE HAZARDOUS WASTE.
Amount (Lbs): 1541912

Waste code: D002
Waste name: A WASTE WHICH HAS A PH OF LESS THAN 2 OR GREATER THAN 12.5 IS CONSIDERED TO BE A CORROSIVE HAZARDOUS WASTE. SODIUM HYDROXIDE, A CAUSTIC SOLUTION WITH A HIGH PH, IS OFTEN USED BY INDUSTRIES TO CLEAN OR DEGREASE PARTS. HYDROCHLORIC ACID, A SOLUTION WITH A LOW PH, IS USED BY MANY INDUSTRIES TO CLEAN METAL PARTS PRIOR TO PAINTING. WHEN THESE CAUSTIC OR ACID SOLUTIONS BECOME CONTAMINATED AND MUST BE DISPOSED, THE WASTE WOULD BE A CORROSIVE HAZARDOUS WASTE.
Amount (Lbs): 369510

Waste code: D003
Waste name: A MATERIAL IS CONSIDERED TO BE A REACTIVE HAZARDOUS WASTE IF IT IS NORMALLY UNSTABLE, REACTS VIOLENTLY WITH WATER, GENERATES TOXIC GASES WHEN EXPOSED TO WATER OR CORROSIVE MATERIALS, OR IF IT IS CAPABLE OF DETONATION OR EXPLOSION WHEN EXPOSED TO HEAT OR A FLAME. ONE EXAMPLE OF SUCH WASTE WOULD BY WASTE GUNPOWDER.

Site Summary:	On Tuesday, November 28, 2017, the Radford Army Ammunition Plant experienced an unauthorized discharge of wastewater out of Outfall 005. This discharge occurred during attempts to repair a water line break near Building 3038 in the Nitrocellulose area. Around 4:00p.m., a piece of debris fell on an exposed wastewater line coming from the

Building 3025 settling basin. From 4:00p.m. until 5:00 p.m., when the process was shut down, wastewater intermittently flowed from this line. Most of this wastewater was trapped in the settling basins prior to Outfall 005, allowing time for Nitrocellulose fines to settle out, however, some of this wastewater flowed directly into Outfall 005 via a bypass line. This bypass line flowed from approximately 4:45p.m. until 5:45p.m. at approximately 3-5 gallons per minute. Total flow out of Outfall 005 during this time period was approximately 76 gallons per minute. The wastewater was sampled and Nitrocellulose fines were not visible to the naked eye, however, using Polarized Light Microscopy, Nitrocellulose fibers were found to be present. The sample was also tested for pH using a pH strip and the water was found to be neutral.A follow-up report will be submitted by Sunday December 3, 2017.

ICIS (Integrated Compliance Information System) is the Integrated Compliance Information System and provides a database that, when complete, will contain integrated Enforcement and Compliance information across most of EPA's programs. The vision for ICIS is to replace EPA's independent databases that contain Enforcement data with a single repository for that information. Currently, ICIS contains all Federal Administrative and Judicial enforcement actions. This information is maintained in ICIS by EPA in the Regional offices and it Headquarters. A future release of ICIS will replace the Permit Compliance System (PCS) which supports the NPDES and will integrate that information with Federal actions already in the system. ICIS also has the capability to track other activities occurring in the Region that support Compliance and Enforcement programs. These include; Incident Tracking, Compliance Assistance, and Compliance Monitoring.

Site Name:	RAAP - UPD - OUTFALL 005
Closure Date:	03/01/2019
Orig. Call Incident Description:	This email serves as initial notification of an unauthorized discharge at the Radford Army Ammunition Plant. At approximately 3:00pm on February 24, 2019, a power failure caused the pumps at Building 3024 to stop functioning. This resulted in an overflow of NC-laden wastewater to Outfall 005 through a built-in bypass at the associated 3025 wastewater pits. At approximately 5:30pm, the effluent to Outfall 005 was shut off to prevent further release. A sample of the Outfall 005 effluent was taken just prior to stopping the effluent flow. This sample was analyzed for percent solids and found to contain 0.0096% solids. Further analysis using polarized light microscopy confirmed the presence of minute levels of NC fibers in the wastewater. As required by Part II.G of RFAAP s VPDES permit, a follow-up report providing further details will be submitted by Friday, March 1st 2019.

Closure Date:	12/13/2018
Orig. Call Incident Description:	On 11 December 2018, around 8:50 am, the Environmental department at the Radford Army Ammunition Plant received a call reporting a broken recovered water line in the NC area. Due to the path of the stormwater conveyance systems in this area, this water traveled to Outfall 005. The recovered water contains small amounts of nitrocellulose fines and has a near neutral pH. While the lagoons at Outfall 005 provide settling time, a sample has been obtained from the effluent of Outfall 005 to test for the presence of nitrocellulose fines.

Site Summary:	Good Afternoon,The following e-mail serves as notification of violation of VPDES Permit (#VA0000248) at the Radford Arsenal. This is in follow-up to the call made to the DEQ Blue Ridge Regional Office at approximately 9:50am on Friday, October 20, 2017. Summary of Events:The pit at our main lab which collects rinse water was recently cleaned and its waste profiled. The waste was found to contain NC, trace amounts of NG and DNT, as well as lead and several other heavy metals. While one of our Environmental Specialists was working with the lab on this waste profiling effort, a chemist questioned where the pit was draining to. The Environmental Specialist brought this question to a contractor on our facility who works with wastewater. She noted that the permit states that all lab waste goes to our sanitary treatment facility, but decided to investigate further. A visual check of manholes around the lab was performed, and during this check, a grated manhole was found to have visible NC. At this point it was decided to perform a dye test to confirm the lab waste was going to our Sanitary Treatment Facility. On 10-19-17, two dye tests were performed. One dye test was performed on the lab pit wastewater, and while efforts were made for several hours to track the conveyance of the pit waste, this test came up inconclusive. A second dye test was performed on a lab floor drain (the lab floors are rinsed down once a day into these drains). This test resulted in the discovery that the lab floor drain was being routed to the manhole where visible NC was previously noted and then eventually conveyed to Outfall 006. Therefore, the lab floor drain is not draining to the Sanitary Treatment Facility, as our permit states. This matter is being considered high priority. Efforts are underway to meet with Safety, Environmental, Utilities and lab personnel to create a prompt plan of action to collect all rinse water from the lab and pump it to a sanitary sewer until a more permanent solution can be established. Another dye test is also being scheduled as a second attempt to discover the route of the lab pit waste and further understand this issue. Please let me know if you have any questions.Sincerely,Laura DickersonEnvironmental SpecialistBAE System - OSIRFAAP T: 1-540-639-7220Laura.dickerson@BAEsystems.com

Site Summary:	On Monday, 25 September 2017, the Radford Army Ammunition Plant experienced a muddy water plume in the New River discharging via Outfall 006. The event occurred from 1500 to 1630 when a chilled water line failed near Bldg 2508. Initial investigations show approximately 18,000-gallons of muddy water was introduced to the sewer system near Bldg. 2508. Discharge from Outfall 006 for this time period was approximately 561,546 gallons. Efforts to cut the water supply off to

Site Summary: On Friday, 08 September 2017, the Radford Army Ammunition Plant experienced a muddy water plume in the New River discharging via Outfall 006. The event occurred from 0900 am to 1230 pm during efforts to repair a filtered water break near Bldg. 1562. Initial investigations show approximately 33,300-gallons of muddy water was introduced to the sewer system near Bldg. 1562. Discharge from Outfall 006 for this time period was approximately 1,028,679 gallons. A sock on the end of the pump hose, as well as water containment berms, were used to help control sediment flow.A follow-up report will be submitted by Wednesday, 13 September 2017.
