Dear Mr. DiIoia:

Arcadis U.S., Inc. is pleased to provide the Final Preliminary Assessment/Site Inspection Report for per- and polyfluoroalkyl substances at Radford Army Ammunition Plant, Virginia. This document has gone through all the necessary reviews and is considered final.

Please call me at 304.396.9424 or Rhonda Stone at 610.563.6122 if you have any questions or comments.

Respectfully,

Jason Artrip
Arcadis U.S., Inc.
Site Inspection Project Manager

EXECUTIVE SUMMARY

The United States Army (Army) is performing preliminary assessments (PAs) and site inspections (SIs) on the current or potential historical use of per- and polyfluoroalkyl substances (PFAS) with a focus on perfluorooctane sulfonate (PFOS), perfluorooctanoic acid (PFOA), and perfluorobutanesulfonic acid (PFBS), at Army installations (installations) nationwide. The PA identifies areas of potential interest (AOPIs) where PFAS-containing materials were used, stored, and/or disposed, or areas where known or suspected releases to the environment occurred. The SI includes multi-media sampling at AOPIs to determine whether or not a release has occurred. The SI may conclude further investigation is warranted, a removal action is required to address immediate threats, or no further action is required. This RFAAP PA/SI was completed in accordance with the Comprehensive Environmental Response, Compensation, and Liability Act of 1980 (CERCLA), National Oil and Hazardous Substances Pollution Contingency Plan, and Army/Department of Defense (DoD) policy and guidance.

RFAAP is located in Pulaski and Montgomery Counties in Virginia. The Main Manufacturing Area (MMA) of the installation comprises approximately 4,800 acres and has historically operated as an industrial military installation supplier of solvent and solvent-less propellants and explosives. The installation also maintains the New River Unit, a storage facility that has no suspected use, storage and/or disposal of any PFAS-containing material, which encompasses approximately 1,800 acres southwest of the MMA. Therefore, this PA/SI focuses on the MMA of RFAAP.

The RFAAP PA identified five AOPIs for investigation during the SI phase. SI sampling results from the five AOPIs were compared to risk-based screening levels calculated by the Office of the Secretary of Defense (OSD) for PFOS, PFOA, and PFBS. PFOS, PFOA, and/or PFBS were detected in soil and/or groundwater at five AOPIs. One of the five AOPIs had PFOS, PFOA, and/or PFBS present at concentrations greater than the risk-based screening levels. The RFAAP PA/SI identified the need for further study in a CERCLA remedial investigation. **Table ES-1** below summarizes the PA/SI sampling results and provides recommendations for further study in a remedial investigation or no action at this time at each AOPI.

Table ES-1. Summary of AOPIs Identified during the PA, PFOS, PFOA, and PFBS Sampling at RFAAP, and Recommendations

AOPI Name	PFOS, PFOA, and/or PFBS detected greater than OSD Risk Screening Levels? (Yes/No/NA/ND/NS)				Recommendation
	GW	SO	SW	SE	
Teflon Coating Facility	Yes	No	ND	NA	Further study in a remedial investigation
Old Fire Station 1, Old Ladder Shed, Current Storage Shed	No	No	No	NA	No action at this time
Old Fire Station 2	No	No	NS	NS	No action at this time
River Warehouse	No	No	NS	NS	No action at this time

AOPI Name	PFOS, PFOA, and/or PFBS detected greater than OSD Risk Screening Levels? (Yes/No/NA/ND/NS)				Recommendation
	GW	SO	SW	SE	
Current Fire Station	NS	No	NS	NS	Supplemental groundwater sampling is recommended

Notes:
Light gray shading – detection greater than the OSD risk screening level
GW – groundwater
NA – not applicable
ND – non-detect
NS – not sampled
SE – sediment
SO – soil
SW – surface water

1 INTRODUCTION

The United States (U.S.) Army (Army) is performing preliminary assessments (PAs) and site inspections (SIs) on the current or potential historical use of per- and polyfluoroalkyl substances (PFAS) with a focus on perfluorooctane sulfonate (PFOS), perfluorooctanoic acid (PFOA), and perfluorobutanesulfonic acid (PFBS), at Army installations (installations) nationwide. The Army is the lead agency under the Comprehensive Environmental Response, Compensation, and Liability Act of 1980 (CERCLA) and Executive Order 12580 and is conducting the PA/SI consistent with its authority under CERCLA, 42 United States Code §§ 9600, et seq. (as amended), and the Defense Environmental Restoration Program, 10 United States Code §§ 2701, et seq. The PFAS PA/SI included two distinct efforts. The PA identified locations that are areas of potential interest (AOPIs) at Radford Army Ammunition Plant (RFAAP) based on the use, storage and/or disposal of PFAS-containing materials, in accordance with the 2018 Army Guidance for Addressing Releases of Per-and Polyfluoroalkyl Substances (Army 2018). The SI included multi-media sampling at AOPIs to determine whether or not a release has occurred, and the PFOS, PFOA, and PFBS results were compared to the Office of the Secretary of Defense (OSD) PFOS, PFOA, and PFBS risk screening levels to determine whether further investigation is warranted. This report provides the PA/SI for RFAAP and was completed in accordance with CERCLA and The National Oil and Hazardous Substances Pollution Contingency Plan.

1.1 Project Background

PFAS are a class of compounds that have been used in a wide range of industrial applications and commercial products due to their unique surface tension/leveling properties. Due to industry and regulatory concerns about the potential health effects and adverse environmental impacts, there has been a reduction in the manufacture and use of PFAS worldwide. In the U.S., significant reductions in the production, importation, and use of PFOS and PFOA (two individual compounds in the PFAS class) occurred between 2001 and 2015 (Interstate Technology Regulatory Council 2017). PFBS replaced PFOS in some applications and is currently used and manufactured in the U.S.

In 2016, the United States Environmental Protection Agency (USEPA) established a lifetime health advisory of 70 nanograms per liter (ng/L) in drinking water for PFOS or PFOA and for the sum of PFOS and PFOA when both are present (USEPA 2016). On 15 October 2019, the OSD provided guidance on the investigation of PFOS, PFOA, and PFBS at Department of Defense (DoD) restoration sites (OSD 2019). The DoD guidance provides risk screening levels for PFOS, PFOA, and PFBS in tap water and soil, calculated using the USEPA's Regional Screening Level (RSL) calculator for residential and industrial/commercial worker receptor scenarios. Following the issuance of the 2019 OSD memo, on 08 April 2021, USEPA published an updated toxicity assessment for PFBS (USEPA 2021). Based on the updated toxicity assessment for PFBS, the OSD issued a memorandum on 15 September 2021 to include updated PFBS risk screening levels. The September 2021 Memorandum: Investigating Per- and Polyfluoroalkyl Substances within the Department of Defense Cleanup Program is provided for reference as **Appendix A**. The OSD risk screening levels for tap water (also used to evaluate groundwater or surface water used as drinking water sources) are 40 ng/L for PFOS and PFOA, and 600 ng/L for PFBS. The PFOS and PFOA soil screening levels for the residential and industrial/commercial scenarios are 0.13 milligrams per kilogram (mg/kg) (residential) and 1.6 mg/kg (industrial/commercial). The soil

screening levels for PFBS are 1.9 mg/kg (residential) and 25 mg/kg (industrial/commercial). These screening criteria are discussed further in **Section 6.5**.

1.2 PA/SI Objectives

This PA/SI was conducted consecutively because the results of the PA yielded AOPIs that necessitated continuing onto the SI phase in accordance with CERCLA. Consequently, this report provides the combined objectives of both PA and SI reports.

1.2.1 PA Objectives

During the PA, investigators collect readily available information and conduct site reconnaissance. This PA will evaluate and document areas where PFAS-containing materials were used, stored, and/or disposed, so the Army can distinguish between sites that pose little or no threat to human health and the environment and sites that require further investigation.

1.2.2 SI Objectives

An SI is conducted when the PA determines an AOPI exists based on probable use, storage, and/or disposal of PFAS-containing materials. The SI includes multi-media sampling at AOPIs to determine whether or not a release has occurred. The SI may conclude further investigation is warranted, a removal action is required to address immediate threats, or no further action is required.

Installation-specific data quality objectives (DQOs) and the sampling design and rationale are summarized in **Sections 6.1** and **6.2**.

1.3 PA/SI Process Description

For RFAAP, PA/SI development followed the process as described below. **Section 3** provides a summary of the PA activities completed, and **Section 6** provides a summary of the SI activities completed for RFAAP. The PA and SI processes are documented in the PA/SI Quality Control Checklist included as **Appendix B**.

1.3.1 Pre-Site Visit

First, an installation kickoff teleconference was held between applicable points of contact (POCs) from United States Army Environmental Command (USAEC), United States Army Corps of Engineers (USACE), RFAAP, and Arcadis U.S., Inc. (Arcadis). The kickoff call occurred on 20 May 2019, eleven weeks before the site visit to discuss the goals and scope of the PA, project scheduling, installation access, timeline for the site visit, access to installation-specific databases, and to request available records.

Records review was conducted before the site visit to obtain electronically available documents from the installation and external sources for review. The purpose of the records research was to identify any area

on the installation that may have been a location where PFAS-containing materials were used, stored, and/or disposed, as well as to gather information on the physical setting and site history at RFAAP.

A read-ahead package was prepared and submitted to the appropriate POCs two weeks before the site visit. The read-ahead package contains the following information:

- The Army Materiel Command operation order
- The Army PA Operations Security requirements package, which includes the antiterrorism/operations security review cover sheet (**Appendix C**)
- The PFAS PA kickoff call minutes
- An information paper on the PA portion of the Army's PFAS PA/SI
- Contact information for key POCs
- A list of the data sources requested and reviewed
- A list of preliminary locations identified during the kickoff call and pre-site visit records review to be evaluated for use, storage, and/or disposal of PFAS-containing materials, where additional information on those areas will be collected through personnel interviews, additional document review, and site reconnaissance.
- A list of roles for the installation POC to consider when recommending potential interviewees.

1.3.2 Preliminary Assessment Site Visit

The site visit was conducted on 06 to 07 August 2019. An in-brief meeting was held to provide installation staff with the objectives of the site visit and team introductions. **Section 3** includes information regarding personnel interviewed.

Personnel interviews were conducted with individuals having significant historical knowledge at RFAAP. The interviews focused on confirming information discussed in historical documents, collecting information that may have not been in historical documents, corroborating other interviewees' information.

Site reconnaissance included visual surveys that assessed the points of potential use, storage, and/or disposal of PFAS-containing materials, as well as potential secondary impacts, and the migration potential from each AOPI (e.g., stormwater drains, building drains and sumps, cracks in the floor/pavement). Physical attributes of the preliminary locations were documented, including local slope and ground and floor conditions (i.e., paved, or unpaved, visual staining), surface water bodies and surface flow, potential receptors, and the distance to the installation boundary. Access to existing groundwater monitoring wells, if present, were also noted during the site reconnaissance in case the monitoring wells could be proposed for SI sampling. Photo documentation of the preliminary locations was collected, and access limitations or advantages related to potential future sampling activities were noted.

An exit briefing was offered to installation personnel at the conclusion of the site visit to raise any items identified during the site visit, discuss any follow-up items, and review the schedule for submitting deliverables. The exit briefing was conducted on 07 August 2019 with the installation, USAEC, and USACE to discuss preliminary findings of the PA site visit.

1.3.3 Post-Site Visit

Information collected before, during, and after the site visit was reviewed and corroborated by cross-referencing records and reviewing interview details and observations noted during site visit reconnaissance. A site visit trip report was completed and provided to the installation POC, applicable USAEC POCs, and USACE regional POCs following the site visit. The information collected during the pre-site visit and site visit activities was compiled to develop the installation-specific PA portion of the PA/SI report (**Section 3**). Site data obtained during the PA were used to develop preliminary conceptual site models (CSMs) for each AOPI, which serve as the basis for developing the SI scope of work presented in an installation-specific Quality Assurance Project Plan (QAPP) Addendum.

1.3.4 Site Inspection Planning and Field Work

The SI process was initiated at the installation to evaluate PFOS, PFOA, and PFBS presence or absence at each AOPI and determine whether further investigation is warranted. First, an SI kickoff and scoping teleconference was held between the Army PA team and the RFAAP.

The objectives of the SI kickoff and scoping teleconference were to:

- discuss the AOPIs selected for sampling and the proposed sampling plan for each AOPI
- gauge regulatory involvement (Virginia Department of Environmental Quality) requirements or preferences
- confirm the plan for investigation derived waste (IDW) handling and disposal
- identify specific installation access requirements and potential schedule conflicts
- discuss general SI deliverable and field work schedule information and logistics

A Programmatic Uniform Federal Policy-Quality Assurance Project Plan (PQAPP) was developed and finalized in October 2019 for the USAEC PFAS PA/SI (Arcadis 2019). The PQAPP details general planning processes for collecting data and describes the implementation of quality assurance (QA) and quality control (QC) activities for the SI portion for Army installations nationwide. Additionally, an installation-specific QAPP Addendum was developed to define the DQOs, present the sampling design and rationale, and provide qualifications for project personnel. The SI field work was completed in accordance with the PQAPP (Arcadis 2019) and the approved installation-specific QAPP Addendum. A Site Safety and Health Plan (SSHP) was also developed as an attachment to the QAPP Addendum to identify specific health and safety hazards that may be encountered at the installation during sampling. The SSHP was designed to supplement the Accident Prevention Plan (Arcadis 2018), which was developed for Army installations nationwide. The QAPP Addendum and SSHP were submitted to the installation and finalized before commencement of field work.

The DQOs, sampling design and rationale, and field methods employed for the SI are summarized from the QAPP Addendum developed for RFAAP (Arcadis 2020) in **Sections 6.1** through **6.3**.

After finalization of the QAPP Addendum and SSHP, field planning and coordination with the installation and subcontractors was completed. Once the schedule was determined, field teams mobilized to the installation to complete the scope of work defined in the QAPP Addendum.

1.3.5 Data Analysis, Validation, and Reporting

Environmental samples collected during the SI were submitted to a laboratory which is DoD Environmental Laboratory Accreditation Program (ELAP)-accredited for PFOS, PFOA, and PFBS analysis by liquid chromatography with tandem mass spectrometry and compliant with the DoD Quality Systems Manual (QSM) 5.3 (DoD and Department of Energy 2019). Laboratory analytical results were then validated and verified by a project chemist to assess the usability of the data collected. Validated analytical results were summarized in the context of OSD risk screening levels (defined in **Section 6.5**).

2 INSTALLATION OVERVIEW

The following subsections provide general information about RFAAP, including the location and layout, the installation mission(s) over time, a brief site history, current and projected land use, climate, topography, geology, hydrogeology, surface water hydrology, potable wells within a 5-mile radius of the installation, and applicable ecological receptors.

2.1 Site Location

RFAAP is a 6,600-acre government-owned, contractor-operated industrial military installation supplier of solvent and solvent-less propellants and explosives in southwest Virginia Pulaski and Montgomery Counties. **Figure 2-1** depicts the site location and **Figure 2-2** depicts the installation layout of RFAAP. The installation consists of two noncontiguous areas: Main Manufacturing Area (MMA) and the New River Unit (NRU). The MMA is approximately 10 miles west of Blacksburg, 37 miles southwest of Roanoke, and situated along the New River (IT Corporation 2001). The NRU is located east of the town of Dublin and approximately 6 miles southwest of the MMA, 43 miles southwest of Roanoke, and 1.5 miles north of Claytor Lake. The adjacent city of Radford, Virginia has an estimated population of 18,339 residents according to the most recent U.S. census estimates. Radford, Virginia is the 29th largest city in Virginia based on official 2018 estimates (U.S. Census Bureau 2019).

2.2 Mission and Brief Site History

RFAAP is owned by the U.S. Department of the Army and was operated under contract with Hercules, Inc., from 1941 to 1995. Alliant Techsystems, Inc. operated the facility from 1995 to 2011 (IT Corporation 2001). Since 2011, BAE Systems, Inc. manages, operates, and maintains the facility. The primary mission of the RFAAP is the manufacture of propellants.

2.3 Current and Projected Land Use

RFAAP consists of two locations in mountainous terrain: the MMA and NRU. Land use surrounding these locations is primarily agricultural with some residential and industrial use. The surrounding community for RFAAP includes the counties of Montgomery, Pulaski, Floyd, and Giles and the city of Radford.

The MMA encompasses approximately 4,800 acres and is located approximately 5 miles northeast of the city of Radford, Virginia. The New River flows through the MMA and divides the MMA into two sections, the northern section (known as the "Horseshoe Area") within the meander of the river, and the southern section, which is the main post area (IT Corporation 2001). The MMA contains the main manufacturing facilities.

The NRU is located approximately 6 miles from the MMA, near Dublin, Virginia. Between 1940 and 1945 the NRU was used to load propellants and igniter charges and to manufacture igniter charge bags. Between 1943 and 1945 operations were expanded to include an additional bag-loading line, rolled powder operations, flash-reducer loading lines, and black powder drying facilities. Production ended after World War II, and the NRU was officially designated as part of the RFAAP installation. Since 1947, approximately 1,000 acres in the western section of the plant have been sold or transferred for other uses. The remaining land on RFAAP is now used for storage.

2.4 Climate

RFAAP has a temperate climate with warm, humid summers and cold winters. In winter, the average temperature is 32 degrees Fahrenheit, and in summer the average temperature is 69 degrees Fahrenheit. The total average rainfall is 40 inches, of which 53 percent (%) occurs from April through September. The average annual snowfall is 28 inches, and the prevailing wind is from the west (United States Army Toxic and Hazardous Materials Agency [USATHAMA] 1987).

2.5 Topography

A topographic map of the installation can be found on **Figure 2-3**. Topography within the MMA of RFAAP can vary from relatively flat floodplain to elevated uplands in the southeast section. The MMA lies in one of a series of narrow valleys typical of the Appalachian Mountain region. The valley is oriented in a northeast-southwest direction and is approximately 25 miles long and 8 miles wide at the southwest end, narrowing to 2 miles at its northeast end. The New River forms the RFAAP boundary to the north at approximately 1,675 feet above mean sea level (amsl). The eastern boundary represents a transition from a floodplain elevation of 1,680 feet amsl to an upland elevation of 1,900 feet amsl. The southern boundary of RFAAP traverses terrain consisting of creek bottoms and sharply rising summits. The western boundary follows the bluff line overlooking the New River to a point where Norfolk and Western Railroad crosses the western portion of the Horseshoe Area. The topography at the NRU contains some relatively flat areas but is dominated by undulating terrain and occasional sinkholes. The highest elevation is approximately 2,160 ft amsl in the western portion of the site, and the lowest elevation is approximately 1,860 ft msl at Hazel Hollow located in the northeastern section of the site (IT Corporation 2001).

2.6 Geology

RFAAP is within the Valley and Ridge physiographic province of the Appalachian Highland Region. The Valley and Ridge physiographic province is made up of elongated, narrow, flat topped ridges of resistant sandstone or metamorphosed sandstone (quartzite) and valleys that are composed of less resistant limestone and shale (USATHAMA 1987). Present day landforms within the vicinity of the RFAAP are the result of complex sequence of faulting and folding, occurring over the last 100 million years. The Pulaski Thrust fault caused Cambrian limestone formations (the Elbrook and the Rome Formations) to overlie younger Mississippian sandstone and shale formations (McCrady/Price Formations). The carbonate formations exposed at the surface through faulting have undergone extensive chemical weathering. The weathering of these carbonate formations results in karst, relatively shallow, subsurface landforms (sinkholes, caves, and solution cavities) which are found in the vicinity of the site. Numerous sinkholes are apparent along the western and southern boundaries of the installation.

The RFAAP is underlain by a complex sequence of both unconsolidated deposits and consolidated bedrock. The unconsolidated deposits consist of residual soils, river alluvium, and terrace deposits. The residual soil, which consists of reddish brown to pale yellow silty sand and gravel lenses or yellowish brown to brown silty loam containing sand and rock fragments, is caused by weathering of the limestone, dolomite, shale, and terrace deposits. River alluvium which lies along the stream valleys, consists primarily of clay, silt, and sand with pebble and cobble lenses. Well logs of monitoring wells drilled in the area indicate that the alluvial deposits can be up to 30 feet thick. Terrace deposits, which mantle much of

the RFAAP area, consist of poorly sorted, well rounded, brown to reddish brown cobbles (known locally as “River Jack”) entrenched in a matrix of sand, silt, and clay. These deposits, which may be over 50 feet thick, were deposited by the New River between later Tertiary and early Pleistocene. The cobbles, which consist of vein quartz, metaquartzite, and feldsparthic sandstone, originate from the Blue Ridge Mountains.

The bedrock that underlies the unconsolidated material consists of the Elbrook Formation, the Rome Formation, and the McCrady/Price Formation. The Elbrook Formation with thickness from 1,400 to 2,000 feet is composed of thickly bedded, blue gray dolomite, interbedded with blue gray to white limestone and with some shale. The Rome Formation with thickness from 1,000 to 2,000 feet is composed of red and green shale, sandstone, dolomite, and pure limestone. A distinctive red shale unit marks the base of the Rome Formation. The McCrady/Price Formation outcrops in a fenster (window) east of the RFAAP (MMA), this formation consists of fossiliferous shale and sandstone.

2.7 Hydrogeology

Groundwater in the vicinity of RFAAP is found in both unconsolidated and consolidated aquifers. Between zero and 50 feet below ground surface (bgs), water bearing characteristics are considered poor and function primarily to recharge lower aquifers. The movement of groundwater through the upper unconsolidated aquifers (alluvium deposits and terrace deposits) is through pore spaces that lie between the particles making up these deposits. The movement of groundwater through the lower consolidated aquifers (Limestone and Dolomite bedrock) is through a complex system of solution cavities produced by solution of bedrock caused by rapid movement of groundwater through rock fractures (USATHAMA 1987).

Generally, in the vicinity of RFAAP, groundwater flows from topographically higher elevations to topographically lower regions; however, the presence of karst features at RFAAP may affect the flow of groundwater, therefore, groundwater beneath a site may not be representative of contamination caused by a release at that site (USEPA EPIC 1992).

Surficial groundwater ultimately discharges into the New River or New River surface water tributaries. Although this statement is generally true much of the year, it may not be true in periods when the New River is in a flood stage. Although no data exists to prove this, it is likely that water from the New River, which has a higher elevation during flood stage than adjacent groundwater formations, will enter these formations and cause a temporary reversal of gradient. Normal groundwater flows resume after flood waters recede (USATHAMA 1987).

2.8 Surface Water Hydrology

All of RFAAP is in the Upper New River drainage basin. Because of a prominent meander in the New River at the RFAAP location, water in the river first flows east in the southern section of RFAAP and then abruptly flows west in the northern section of the RFAAP. Stroubles Creek is a significant tributary of the New River in that it drains approximately one-third of the RFAAP MMA. Stroubles Creek located in the eastern section of the MMA flows northerly and enters the New River near the east central portion of the installation.

The New River is a drinking water and production water resource for RFAAP. The active RFAAP surface water intake is located along the New River upstream of the AOPIs. A second RFAAP surface water intake is located further downstream along the New River; however, this second surface water intake is no longer operational, and RFAAP does not plan to use it in the future.

Additional private wells may exist within the shallow or deep aquifers surrounding RFAAP. Specifically, Montgomery County, which lies to the east of the New River in the RFAAP area sources water from rivers, lakes, streams, ponds, reservoirs, springs, and wells (Montgomery County Public Service Authority 2019). Specific locations of drinking water sources are not public information and, therefore, are unavailable at this time. Other local off-installation usage of the New River includes crop irrigation, boating, and sport fishing (USATHAMA 1987).

2.9 Relevant Utility Infrastructure

The following subsections provide general information regarding the installation's stormwater and wastewater management systems, as well as information on how the utility infrastructures may influence the fate and transport of PFAS constituents at RFAAP.

2.9.1 Stormwater Management System Description

Stormwater on RFAAP is mostly conveyed via natural tributaries to the New River. Stroubles Creek, the largest local tributary to the New River, is the main channel stream that flows through the southeast sector of the installation. Stroubles Creek consists primarily of stormwater runoff from the rural areas through which it flows prior to entering the installation, as well as the municipal wastewater treatment plant effluent. This creek is fed by several branches that originate on and off the installation (Parsons Engineering Science, Inc. 1997). Several intermittent streams merge into Hazel Hallow, the location of the lowest elevation point on the installation and carry surface runoff to the northeast corner of the NRU (IT Corporation 2001). Manmade surface drainage ways at RFAAP also influence local drainage. All surface drainage flow within RFAAP is ultimately toward the New River (Parsons Engineering Science, Inc. 1997).

2.9.2 Sewer System Description

The National Pollution Discharge Elimination System permit water balance for RFAAP indicates there are nine distinct outfall locations currently in use at the MMA. Outfalls 005, 006, and 030 discharge non-contact industrial cooling and washdown water, as well as stormwater and spring water captured on-site. Outfalls 014, 031 and 044 discharge captured spring water, stormwater, or inputs from possible on-site water line breaks. Domestic wastewater generated on-site is routed to outfall 026 through the Trickling Filter Treatment Plant. Industrial process water is routed to either outfall 007 through the A-B Line Acid Waste Treatment Plant or outfall 029 through the Biological Treatment Plant.

Several communities and industries discharge wastes into New River before it reaches RFAAP. Stroubles Creek comprises primarily storm water runoff and effluent from the Blacksburg, Virginia municipal wastewater treatment plant. Stroubles Creek then discharges into the New River on the RFAAP installation and contributes significant loadings of domestic and industrial wastes. Both industrial and domestic wastes are being discharged into the New River from the city of Radford, upstream from RFAAP (USATHAMA 1976).

2.10 Potable Water Supply and Drinking Water Receptors

RFAAP has no on-installation potable wells or drinking water supply wells. An Environmental Data Resources, Inc. (EDR) report includes search results from a variety of environmental, state, city, and other publicly available databases for a referenced property. An EDR report was generated for RFAAP, which along with state and county GIS provided by the installation identified several off-post public and private wells within 5 miles of the installation boundary (**Figure 2-4**). The EDR report providing well search results provided as **Appendix E** (included in final electronic deliverable only).

Multiple public water supply wells, a state water well, and four community water supply systems exist within 5 miles of the installation boundary. The public water supply wells are primarily south, southeast, and east of the installation with one to the northwest. The state water well is northwest of the installation, and the community water supply systems are south and southeast of the installation. The New River is a drinking water and production water resource for RFAAP. The active RFAAP surface water intake is located along the New River upstream of the AOPIs.

2.11 Ecological Receptors

The PA team collected information regarding ecological receptors that was available in the installation documents. The following information is provided for future reference should the Army decide to evaluate exposure pathways relevant to the ecological receptors.

The following four major ecological systems were identified at the installation: terrestrial, palustrine, riverine, and subterranean. The terrestrial communities at RFAAP include pine forests, mixed hardwood forests, mixed hardwood/pine forests, cliffs, and various cultural communities. Common wildlife species found in the pine and mixed hardwood forests are wild turkey, white-tailed deer, and various raptors and songbirds. The palustrine communities at RFAAP include floodplain forests, sinkhole wetlands, and various cultural communities. Large numbers of black vultures are present during certain times of the year and congregate on large sycamore trees in the floodplain forests. The riverine system at RFAAP consists of aquatic communities of flowing non-tidal waters, main channel streams, and intermittent streams. The subterranean communities at RFAAP include caves and caverns (Parsons Engineering Science, Inc. 1997).

Ecological receptors include threatened and endangered species and sensitive environments. The natural communities in RFAAP are associated with the following rare and unique flora: Hairy Woodmint, Pubescent Sedge, Tennessee Bladderfern, Goldenseal, Butternut, American Ginseng, Lance-leaved Buckthorn, Mead's Sedge, Grooved Yellow Flax, Virginia White-haired Leatherflower, Smooth Cliff-brake, Inland Sedge, Schweinitz's Sedge, Prairie Straw Sedge, Rigid Sedge, Small-headed Rush, Cherokee Sedge, Soft Fox Sedge, Sweet-scented Indian Plantain, Sessile-fruited Arrowhead and Matted Spikerush. There are no rare or unique fauna associated with the natural communities. The artificial communities in RFAAP are associated with the following rare and unique flora and fauna: Midland Sedge, Shaggy False, Gromwell, Regal Fritillary, Henslow's Sparrow, Loggerhead Shrike, Prairie Straw Sedge, Small-headed Rush, Bog Twayblade, Shining Ladies'-tresses and Tall Dropseed.

3 SUMMARY OF PA ACTIVITIES

To document areas where any potential current and/or historical PFAS-containing materials were used, stored and/or disposed at RFAAP, data was collected from three principal sources of information and are described in the subsections below:

1. Records review
2. Personnel interviews
3. Site reconnaissance.

Preliminary locations of potential use, storage, and/or disposal of PFAS-containing materials were then evaluated in the PA (during records review, personnel interviews, and/or site reconnaissance) and were categorized as AOPIs or as areas not retained for further investigation at this time based on a combination of information collected (e.g., records reviewed, personnel interviews, internet searches). A summary of the observations made, and data collected through records reviews (**Appendix F**), installation personnel interviews (**Appendix G**), and site reconnaissance logs (**Appendix H**) during the PA process for RFAAP is presented in **Section 4**. Further discussion regarding rationale for not retaining areas for further investigation is presented in **Section 5.1**, and further discussion regarding categorizing areas as AOPIs is presented in **Section 5.2**.

3.1 Records Review

The records reviewed for this PA included, but were not limited to, various Installation Restoration Program (IRP) administrative record documents, compliance documents, RFAAP fire department documents, RFAAP directorate of public works (DPW) documents, and GIS files. Internet searches were also conducted to identify publicly available and other relevant information. A list of the specific documents reviewed for RFAAP is provided in **Appendix F**.

3.2 Personnel Interviews

Interviews were conducted during the site visit. If a previously identified interviewee was not available during the site visit, attempts were made to complete the interview via telephone before or following the site visit or by contacting an alternate interviewee identified by the installation POC.

The list of roles for the installation personnel interviewed during the PA process for RFAAP is presented below (affiliation is with RFAAP unless otherwise noted).

- IRP Manager
- Natural Resources Manager
- Environmental Management Team Member
- Utilities Maintenance Team Leader (affiliation: BAE Systems, Inc.)
- Emergency Management (affiliation: BAE Systems, Inc.)
- Fire Chief (affiliation: BAE Systems, Inc.)

- Fire Captain (affiliation: BAE Systems, Inc.)
- Firefighter (affiliation: BAE Systems, Inc.)
- Maintenance Team Member (affiliation: BAE Systems, Inc.)
- Utilities Maintenance (Retired) (affiliation: BAE Systems, Inc.)

The compiled interview logs are provided in **Appendix G**.

3.3 Site Reconnaissance

Site reconnaissance and visual surveys were conducted at the preliminary locations identified at RFAAP during the records review process, the installation in-brief meeting, and/or during the installation personnel interviews. The site reconnaissance logs are provided in **Appendix H**.

Access to existing groundwater monitoring wells, if present, were also noted during the site reconnaissance in case the monitoring wells could be proposed for SI sampling.

4 POTENTIAL PFAS USE, STORAGE, AND/OR DISPOSAL AREAS

RFAAP was evaluated for all potential current and historical use, storage, and/or disposal of PFAS-containing materials. There are a variety of PFAS-containing materials used in relation to current and historical Army operations. However, the use, storage, and/or disposal of aqueous film-forming foam (AFFF) is the most prevalent potential source of PFAS chemicals at DoD facilities. As such, this section is organized to summarize the AFFF-related uses first, and all remaining potential PFAS-containing materials in the subsequent section.

4.1 AFFF Use, Storage, and Disposal Areas

AFFF was developed in the mid-1960s in response to a need for firefighting foams better suited to extinguish Class B, fuel-based fires. AFFF formulations consist of water, an organic solvent, up to 5 percent (%) hydrocarbon surfactants, and 1 to 3% PFAS (Interstate Technology Regulatory Council 2020). AFFF concentrate is designed to be diluted with water to become a 1, 3, or 6% foam. AFFF releases at DoD facilities may have occurred during firefighter training, emergency response actions, equipment testing, or accidental releases. The military still primarily uses AFFF for Class B fires; however, the current formulations of AFFF contain significantly lower amounts of PFOS, PFOA, and their precursors, and significant operational changes have been implemented to restrict uncontrolled releases and non-essential use of PFAS-containing foams. Army installations may still house AFFF, commonly stored in closed containers (e.g., 55-gallon drums, 5-gallon buckets), within designated storage buildings or at firehouses.

Additionally, AFFF is or was used, stored and/or disposed at several locations:

- The Old Fire Station 1 was used from the 1940s to 1990s. One of two fire engines parked here was known to contain an AFFF reservoir. However, AFFF has not been used at this AOPI since 1998.
- The Old Ladder Shed was used from the 1940s to 1990s for AFFF storage in conjunction with Old Fire Station 1. AFFF filling potentially occurred near this building.
- The Current Storage Shed stores two Ansulite AFFF foam trailers (265 gallons each) in case of a fire at the solvent recovery facility. The storage area also contains 5-gallon buckets of Ansulite AFFF (112 buckets observed during PA site visit).
- The Old Fire Station 2 was used from the 1940s to 1990s. Based on RFAAP personnel interviews, it is unclear if AFFF was ever stored in this location.
- The River Warehouse was used for driver/operator fire department training in approximately 2004 and potentially used prior. The dirt road adjacent to the fence line at the River Warehouse area was utilized to drive fire engines while AFFF was sprayed into the grassy areas between the road and warehouse more than once a year.
- The Current Fire Station replaced the Old Fire Station 1 and Old Fire Station 2 in the late-1990s. AFFF has been filled in engine reservoirs at least once with a pump, and fire department personnel

reported during the PA site visit that AFFF containers were stored in the bays for a short period at least once.

One facility at RFAAP, termed the GAC Area, is used as a solvent recovery operation. This facility contains extremely flammable alcohol and ether stacks. Therefore, if a fire were to occur at the GAC Area, foam trailers would be transported from the current foam storage area and attached to nozzles installed at the facility. The fire response system has never been used; however, there is potential for future discharge if a fire occurred.

4.2 Other PFAS Use, Storage, and/or Disposal Areas

Following document research, personnel interviews, and site reconnaissance at RFAAP, the use of Teflon, a PFAS-containing material, occurred at a Teflon coating facility. This facility was operational from the 1940s to 1990s in varying capacities for Teflon spray coating of materials. Teflon-containing particles were vented into the atmosphere via a large air stack, and residual Teflon solids were washed into floor drains from water screens/curtains located behind the spray booth in the building.

Other potential PFAS-containing materials use, storage, and disposal (e.g., landfills, metal plating operations, pesticide areas, laundry operations) were either not identified at the installation or did not prompt further research or constitute categorization as AOPIs. Specific discussion regarding areas not retained for further investigation is presented in **Section 5.1** and specific discussion regarding areas retained as AOPIs is presented in **Section 5.2**.

Areas identified during the PA of this investigation for potential use, storage, and/or disposal of PFAS-containing materials that are not related to AFFF include the Teflon Coating Facility AOPI, Former Cadmium Plating Facility (Building 4343), and X-Ray facilities.

The Teflon Coating Facility AOPI was used from the 1940s to 1990s to coat materials with Teflon via spray. Teflon-containing particles were vented into the atmosphere via a large air stack, and residual Teflon solids were washed into floor drains, which discharge to Stroubles Creek, from water screen/curtains located behind the spray booth in the building.

In 1956, the Building 4343 was functioning as a small cadmium plating operation consisting of only one plating bath. Process water was stored in a catch tank in the building then was neutralized and drained to a ditch north of the building. IRP investigation identified cadmium in soil in 1997, and soil was removed. An additional removal action occurred in 2006; Building was demolished, and 7 tons of soil were removed and disposed of off-site. Although information on the use of solvent and mist suppressants is unavailable, due to the extent of the cleanup, if PFAS-containing chemicals were used, they would likely not remain on-site.

X-Ray facilities include Building 200, another building with no name available, and the RFAAP health clinic. Building 200, which is now demolished, and the building with no name available, had a photography operation. Both were small operations no longer in use with no information available on historical solvent use. The health clinic, which is still in operation, contained a small x-ray operation but now uses digital x-ray. There was no information available on use of historical solvents.

It was noted during a discussion with a USAEC Pest Management Consultant that the larger group of pesticides are generally not of PFAS concern. Specifically, products containing Sulfluramid (i.e.,

associated with insecticides) may have contained PFAS and were phased out in 1996. The USAEC Pest Management Consultant has records of pesticides used and stored at Installation Management Command installations, including RFAAP, and did not identify RFAAP as an installation having used or stored PFAS-containing pesticides/insecticides. Additionally, the PA team reviewed available pesticide use inventory documentation provided by the installation and did not identify PFAS-containing pesticides use, storage, or disposal.

4.3 Readily Identifiable Off-Post PFAS Sources

An exhaustive search to identify all potential off-post PFAS sources (i.e., not related to operations at RFAAP) is not part of the PA/SI. However, potential off-post PFAS sources within a 5-mile radius of the installation that were identified during the records search and site visit are described below.

Nearby community fire departments could potentially be off-post PFAS sources within close proximity of RFAAP, if they use AFFF. The following fire departments are located within 5 miles of the installation boundary and information regarding their historical and current AFFF use, storage, and/or disposal was not available:

- Longshop-McCoy Fire Department (approximately 1.4 miles north-northwest of RFAAP)
- Blacksburg Fire Department Station #2 (approximately 3.4 miles northeast of RFAAP)
- Fairlawn Volunteer Fire Department (approximately 1.9 miles south-southwest of RFAAP)
- Twin Community Volunteer Fire Station (approximately 2.7 miles south of RFAAP)
- Radford Fire and Rescue Department (approximately 3.3 miles south of RFAAP)

5 SUMMARY AND DISCUSSION OF PA RESULTS

The preliminary locations evaluated for potential use, storage, and/or disposal of PFAS-containing materials at RFAAP were further refined during the PA process and identified either as an area not retained for further investigation or as an AOPI. In accordance with the established process for the PA/SI, five have been identified as AOPIs. The process used for refining these areas is presented on **Figure 5-1**, below.

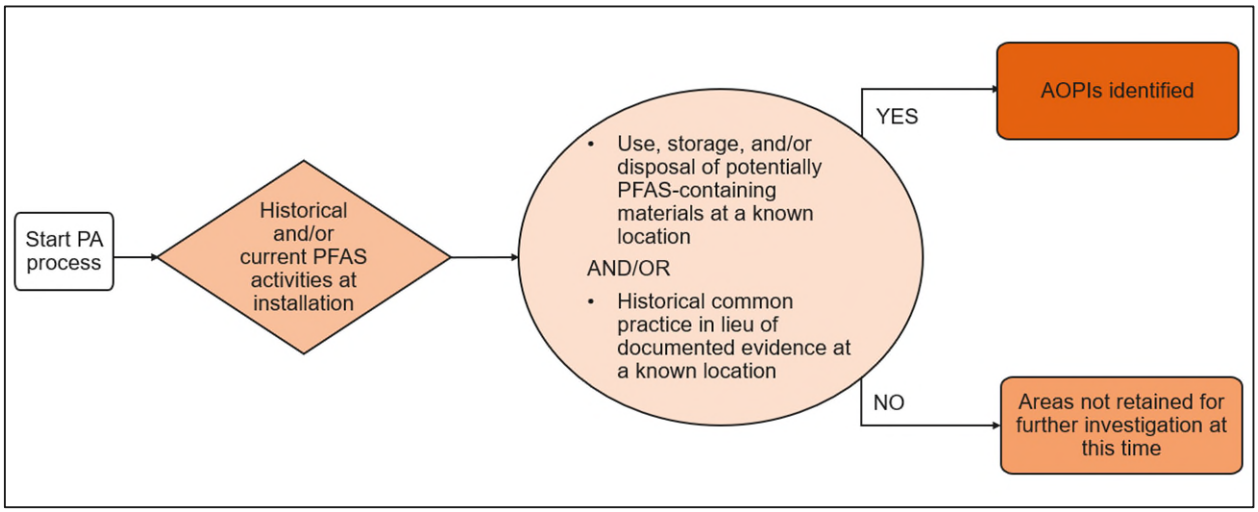

Figure 5-1: AOPI Decision Flowchart

The areas not retained for further investigation are presented in **Section 5.1**. The areas retained as AOPIs are presented in **Section 5.2**.

Data limitations for this PA/SI at RFAAP are presented in **Section 8**.

5.1 Areas Not Retained for Further Investigation

Through the evaluation of information obtained during records review, personnel interviews, and/or site reconnaissance, the areas described below were categorized as areas not retained for further investigation at this time.

A brief site history and rationale for areas not retained for further investigation are presented in **Table 5-1**, below.

Table 5-1. Installation Areas Not Retained for Further Investigation

Area Description	Dates of Operation	Relevant Site History	Rationale
GAC Area	Unknown	This facility is a solvent recovery operation with alcohol and ether stacks, which are extremely flammable. If a fire occurred, foam trailers would be brought in from the current foam storage area and could be attached to nozzles installed at the GAC Area. The fire response system has never been used.	AFFF emergency response system is in place but has not been used.
Former Cadmium Plating Facility (Building 4343)	1956	Small cadmium plating operation consisting of only one plating bath. Information regarding solvents and mist suppressants use is unavailable. Process water was stored in a catch tank in the building then was neutralized and drained to a ditch north of the building. IRP investigation identified cadmium in soil in 1997, and soil was removed. An additional removal action occurred in 2006; Building was demolished, 7 tons of soil was removed down to 6 to 8 feet at the building and ditch area and disposed of off-site. Due to the extent of the cleanup, it is expected that if PFAS-containing chemicals were used, they would not remain on-site.	No evidence of PFOS, PFOA, or PFBS containing products used, stored, and/or disposed of at this location.
X-Ray Facilities	Unknown	Building 200 (demolished) had a former photography operation. Another former operation was in an active building. Both were small operations no longer in use. Information regarding	No evidence of PFOS, PFOA, or PFBS containing products used, stored, and/or disposed of at this location.

Area Description	Dates of Operation	Relevant Site History	Rationale
		historical solvent use is unavailable.	
X-Ray Facilities	Unknown	The health clinic contained a former small x-ray operation. The health clinic is still in place but now uses digital x-ray. Information regarding historical solvent use is unavailable.	No evidence of PFOS, PFOA, or PFBS containing products used, stored, and/or disposed of at this location.

5.2 AOPIs

Overviews for each AOPI identified during the PA process are presented in this section. None of the AOPIs overlap with RFAAP IRP sites and/or Headquarters Army Environmental System sites (**Figure 5-2**). The AOPI and current site status are discussed within each AOPI subsection presented below. At the time of this PA, none of the RFAAP sites have historically been investigated or are currently being investigated for the possible presence of PFAS.

The AOPI locations are shown on **Figure 5-2**. Aerial photographs of each AOPI that also show the approximate extent of AFFF use (if applicable) are presented on **Figures 5-3** through **5-7** and include active monitoring wells in the vicinity of each AOPI.

5.2.1 Teflon Coating Facility

The Teflon Coating Facility is identified as an AOPI following records research, personnel interviews, and site reconnaissance due to the use of Teflon, a PFAS-containing material (**Figure 5-3)**. This facility was used from the 1940s to 1990s in varying capacities for Teflon spray coating of materials. Teflon-containing particles were vented into the atmosphere via a large air stack, and residual Teflon solids were washed into floor drains from water screen/curtains located behind the spray booth in the building. The building drains are piped to a discharge located on Stroubles Creek, which merges with the New River. The current and future land use is industrial.

5.2.2 Old Fire Station 1, Old Ladder Shed, and Current Storage Shed

The Old Fire Station 1, Old Ladder Shed, and Current Storage Shed is identified as an AOPI following records research, personnel interviews, and site reconnaissance due to storage of fire trucks containing AFFF or storage of AFFF (**Figure 5-4**). The current and future land use is industrial.

The Old Fire Station 1 was a former fire station used from the 1940s to 1990s. One of two fire engines parked here was known to contain an AFFF reservoir. Information regarding AFFF use, nozzle testing, training, and other fire department practices at this facility are unavailable. This building was demolished in the late-1990s. AFFF has not been used at this AOPI since 1998. The location is currently a gravel lot used for temporary construction headquarters trailers.

The Old Ladder Shed was used from the 1940s to 1990s in conjunction with Old Fire Station 1. It is located near the Old Fire Station 1. One of its uses was historical AFFF storage; therefore, AFFF filling potentially occurred near this building. Information regarding historical spills and AFFF handling are unavailable. This building was demolished in the late-1990s. The location is currently a gravel lot.

The Current Storage Shed stored two Ansulite AFFF foam trailers (265 gallons each) in case of a fire at the solvent recovery facility. There is no documentation or likeliness that a fire ever occurred requiring the use of the foam trailers. The Current Storage Shed also contains 5-gallon buckets of Ansulite AFFF (112 buckets observed during PA site visit) and during the PA site visit was clean with no evidence of AFFF spills. According to RFAAP personnel, no refilling of AFFF reservoirs occurs in this building. There is no drain in this building. While AFFF storage was verified at this location, there are no known releases.

5.2.3 Old Fire Station 2

The Old Fire Station 2 is identified as an AOPI following records research, personnel interviews, and site reconnaissance due to the potential use and storage of AFFF (**Figure 5-5**). This former fire station was used from the 1940s to 1990s. Information on whether RFAAP fire engines or AFFF were stored at this location is unavailable. Additionally, information regarding AFFF use, nozzle testing, and training are unavailable prior to 1998. According to RFAAP personnel, AFFF has not been used at this AOPI since 1998. This building is still in place and is used as an office building. Based on site reconnaissance, potential nozzle testing or flushing areas were identified in the immediate surface runoff flow pathway from fire station aprons. The current and future land use is industrial.

5.2.4 River Warehouse

The River Warehouse is identified as an AOPI following records research, personnel interviews, and site reconnaissance due to the spraying of AFFF (**Figure 5-6**). This location has been used for driver/operator fire department training in approximately 2004 and potentially used prior. Fire department personnel stated in the PA site visit interview that personnel from all three shifts trained once per year but were unsure how many years this training occurred. The dirt road adjacent to the fence line at the River Warehouse area was utilized to drive RFAAP fire engines while AFFF was sprayed into the grassy areas between the road and warehouse multiple times a year. Information regarding how many years was unavailable. The current and future land use is industrial.

5.2.5 Current Fire Station

The Current Fire Station is identified as an AOPI following records research, personnel interviews, and site reconnaissance due to historical storage of AFFF (**Figure 5-7**). This fire station replaced Old Fire Stations 1 and 2 in the late-1990s. According to RFAAP personnel, nozzle testing has not occurred at this fire station. AFFF has been filled in engine reservoirs at least once with a pump, and no leaks were reported. AFFF is not currently stored at this fire station, but fire department personnel reported during the PA site visit that AFFF containers were stored in the bays for a short period at least once. The current and future land use is industrial.

6 SUMMARY OF SI ACTIVITIES

Based on the results of the PA at RFAAP, an SI for PFOS, PFOA, and PFBS was conducted in accordance with CERCLA. SI sampling was completed at RFAAP at all AOPIs to evaluate presence or absence of PFOS, PFOA, and PFBS in comparison with the OSD risk screening levels. As such, an installation-specific QAPP Addendum (Arcadis 2020) was developed to supplement the general information provided in the PQAPP (Arcadis 2019) and to detail the site-specific proposed scopes of work for the SI. A preliminary CSM was prepared for each of the installation's AOPIs in accordance with the USACE Engineer Manual on Conceptual Site Models, EM 200-1-12 (USACE 2012). The preliminary CSMs identified potential human receptors and chemical exposure pathways based on current and/or reasonably anticipated future land uses. The preliminary CSMs identified 16 soil, groundwater, surface water, and sediment pathways as potentially complete which guided the SI sampling. The QAPP Addendum details the sampling design and rationale based on each AOPI's preliminary CSM. The SI scope of work was completed in January 2021 through the collection of field data and analytical samples.

The SI field work was completed in accordance with the standard operating procedures (SOPs), technical guidance instructions (TGIs), sampling design, and QA/QC requirements as detailed in the QAPP Addendum (Arcadis 2020) and PQAPP (Arcadis 2019). The subsections below summarize the DQOs, sampling design and rationale, sampling activities and methods, and data analyses procedures for the SI phase at RFAAP. Non-conformances to the prescribed procedures in the PQAPP and QAPP Addendum are described in **Section 6.3.4**. Analytical results obtained through SI field activities are summarized in **Section 7**.

6.1 Data Quality Objectives

As identified during the DQO process and outlined in the site-specific QAPP Addendum (Arcadis 2020), the objective of the SI is to identify whether there has been a release to the environment at the AOPIs identified in the PA and to determine if further investigation is warranted. This SI evaluated groundwater, soil, surface water, and sediment for PFOS, PFOA, and PFBS presence or absence at each of the sampled AOPIs.

6.2 Sampling Design and Rationale

The rationale for sampling at each AOPI is illustrated on **Figure 6-1** below.

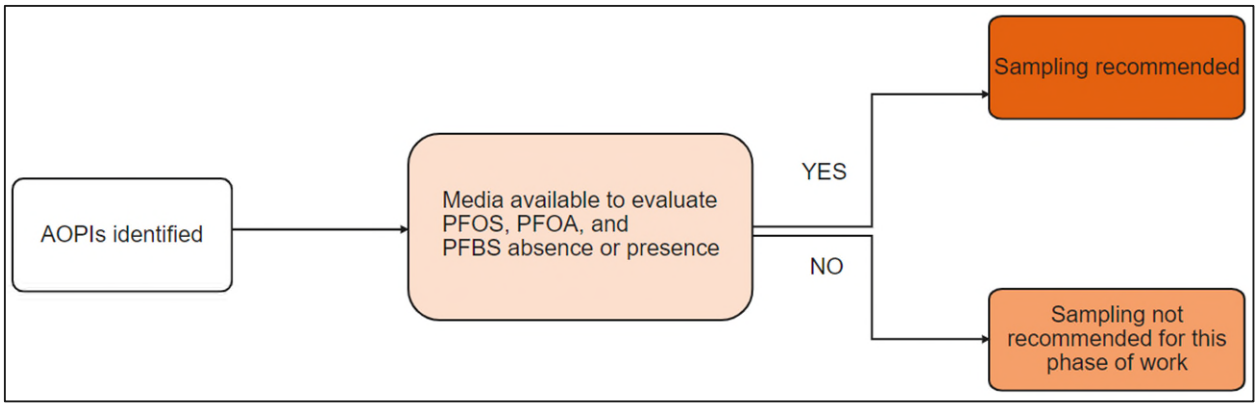

Figure 6-1: AOPI Sampling Decision Tree

The sampling design for SI sampling activities at RFAAP is detailed in Worksheet #17 of the QAPP Addendum (Arcadis 2020). Groundwater samples were collected to inform the interpretation of PFOS, PFOA, and PFBS presence and update the individual AOPI CSMs. Soil samples were collected to evaluate PFOS, PFOA, and PFBS presence or absence at potential release areas, to evaluate the potential for those areas to be sources of PFOS, PFOA, and PFBS to surface water and groundwater as an influence to drinking water, and to update the individual AOPI CSMs. Surface water samples were collected to inform the presence or absence of PFOS, PFOA, and PFBS at known or potential source areas. Sediment samples were collected to evaluate PFOS, PFOA, and PFBS presence or absence at known or potential source areas, to evaluate the potential for those areas to be sources to surface water and groundwater as an influence to drinking water, and to update the individual AOPI CSMs.

The sampling depth at the existing monitoring well was at approximately the center of the saturated screened interval. **Table 6-1** includes the monitoring well construction details for the well sampled during the SI.

6.3 Sampling Methods and Procedures

Environmental data were collected and analyzed in accordance with the PQAPP (Arcadis 2019), the SOPs and TGIs included as Appendix A to the PQAPP, the QA/QC requirements identified in Worksheet #20 of the PQAPP, the approved scope and sampling methods outlined in the site-specific QAPP Addendum (Arcadis 2020), and the safety procedures specified in the Accident Prevention Plan (Arcadis 2018) and SSHP (Arcadis 2020). The sampling methods described in the SOPs and TGIs establish equipment requirements, procedures for preparing equipment and containers before sampling, sampling procedures under various conditions, and procedures for storing samples to ensure that sample contamination does not occur during collection, and transport. In general, sampling techniques used in the SI were consistent with conventional sampling techniques used in the environmental industry, but special considerations were made regarding PFAS-containing materials and equipment and cross-contamination potential.

The sampling methods employed during the SI are detailed in the PQAPP (Arcadis 2019) and QAPP Addendum (Arcadis 2020). The subsections below provide a summary of the field methods and procedures utilized to complete the SI scope of work. Field notes and field forms (i.e., soil boring logs,

groundwater purging logs, equipment calibration forms, tailgate health and safety forms, and sample collection logs) documenting the SI sampling activities are included in **Appendices I** and **J**, respectively.

6.3.1 Field Methods

Soil samples were collected and analyzed for PFOS, PFOA, and PFBS; total organic carbon (TOC), pH, and grain size were analyzed in one soil sample per AOPI (i.e., these analytes were not analyzed for in every soil sample collected). Soil lithological descriptions were continuously logged and documented on field forms. Soil samples were collected via hand auger method in accordance with the TGI for PFAS Field Sampling (all media) (P-110 in Appendix A to the PQAPP [Arcadis 2019]) from three to five sampling points at each AOPI for a total of 20 total discrete points. At each sampling point, the soil sample was collected from the top 2 feet of native soil.

Grab groundwater samples were collected via direct-push technology (DPT) from 5 total discrete direct-push points at the Old Fire Station 1, Old Ladder Shed, and Current Storage Shed AOPI, Old Fire Station 2 AOPI, River Warehouse AOPI, and Teflon Coating Facility AOPI. Shallow (first encountered) groundwater was sampled at each of these sampling points. DPT borings were completed in accordance with the TGI for PFAS-Specific Drilling and Monitoring Well Installation (P-12 in Appendix A to the PQAPP [Arcadis 2019]). A groundwater sample was collected from one existing monitoring well at the Old Fire Station 2 AOPI, which was collected from approximately the center of the saturated screened interval. A low-flow peristaltic pump was used for purging. Groundwater samples were analyzed for PFOS, PFOA, and PFBS, and field parameters (temperature, pH, specific conductivity, dissolved oxygen, turbidity, and oxidation-reduction potential) were measured during purging and allowed to stabilize in accordance with the TGI for PFOS, PFOA, and PFBS Sampling Procedures and Low-Flow Groundwater Purging for Monitoring Wells (P-11 in Appendix A to the PQAPP; Arcadis 2019) (or purged for a maximum of 20 minutes, whichever was sooner) before groundwater sampling to ensure a representative sample was collected and, potentially, to inform the interpretation of analytical data. Coordinates for each borehole's groundwater sampling location were recorded using a handheld global positioning system.

Grab surface water samples were collected from four total locations to inform the presence or absence of PFOS, PFOA, and PFBS in known or potential source areas. All surface water samples were analyzed for PFOS, PFOA, and PFBS, and field parameters (temperature, pH, specific conductivity, dissolved oxygen, turbidity, and oxidation-reduction potential) were measured during surface water sampling to potentially inform the interpretation of analytical data. Coordinates for each surface water sampling location were recorded using a handheld global positioning system. Where surface water samples were co-located with sediment sampling (Teflon Coating Facility AOPI), the surface water sample was collected before the sediment sample to reduce siltation.

One sediment sample was co-located with a surface water sample. This sample was collected from the upper ten centimeters using dedicated Lexan™ tubes or equivalent, and the sediment was decanted before bottling for laboratory analysis of select PFOS, PFOA, and PFBS only. Sediment descriptions were documented on field forms. Coordinates for each sediment sampling location were recorded using a handheld global positioning system.

Decontamination procedures for non-dedicated equipment used during sampling are described in **Section 6.3.5**.

6.3.2 Quality Assurance/Quality Control

Worksheets #20 of the PQAPP and QAPP Addendum provide QA/QC requirements for field duplicates, matrix spike (MS)/matrix spike duplicate (MSD), equipment blanks (EBs), source blanks (SBs) for water used in the initial decontamination step for drill tooling, and field blanks for laboratory-supplied water used in the final decontamination step.

QA/QC samples were collected at the frequencies specified in the QAPP Addendum (Arcadis 2020), typically at a rate of 1 per 20 parent samples. Field duplicates and MS/MSD samples were collected for media sampled for PFOS, PFOA, and PFBS, and TOC only. EBs were collected for media sampled for PFOS, PFOA, and PFBS, at a frequency of one per piece of relevant equipment for each sampling event, as specified in the QAPP Addendum (Arcadis 2020). The decontaminated reusable equipment from which EBs were collected include groundwater pump/tubing, drill casing and cutting shoes, hand augers, water-level meters, and stainless-steel trowels as applicable to the sampled media. An SB was collected from the water used to pressure-wash drill tooling. Analytical results for blank samples are discussed in **Section 7.10**.

6.3.3 Dedicated Equipment Background

Dedicated equipment background (DEB) samples were collected at a frequency of one DEB per AOPI at AOPIs where groundwater sampling was conducted at existing monitoring wells that contained dedicated, down-hole equipment. One DEB total was collected (RFAAP-31MW1-DEB-1-010521) from groundwater potentially affected by the transducer inside of well 31MW1. The DEB was collected when water was first produced during the initial purging of the equipment (i.e., before one equipment [pump and tubing] volume has been purged). The monitoring well was then sampled for the normal parent groundwater sample via low-flow purge methods following stabilization of field parameters as described below. Further DEB analysis is included in **Section 7.7**.

6.3.4 Field Change Reports

No instances of major scope modifications (i.e., those that may have had a significant impact on the project scope and/or data usability/quality, or required stop-work, and warranted discussion with USACE) were encountered during the RFAAP SI work.

In some cases, clarifications to the established scope of work were needed but do not necessarily constitute a non-conformance from the sampling plans described in the QAPP Addendum. Minor modifications from and clarifications for the procedures and scope of work detailed in the QAPP Addendum and PQAPP and that did not affect DQOs are documented in Field Change Reports (FCRs) included as **Appendix K** and are summarized below:

FCR-RFAAP-01

- One groundwater sample (RFAAP-RW-GW-1) was added at the River Warehouse AOPI due to a request in October 2020 by USAEC for further review of karst installations and associated groundwater sampling.

FCR-RFAAP-02

- One surface water sample (RFAAP-CFS-SW-1) was not collected at the Current Fire Station AOPI due to no water present at the time of the sampling event. Per discussion, this sample was suspected to be potentially unavailable due to the amount of rain the installation would receive around the time of the sampling event. Soil samples from this AOPI and surface water from proximal AOPIs provided sufficient data to determine presence or absence of PFOS, PFOA, and/or PFBS.

FCR-RFAAP-03

- One groundwater sample (RFAAP-TEF-GW-2) was not collected at the Teflon Coating Facility AOPI due to the drill rig meeting refusal before groundwater occurred. Groundwater was sampled at two other proximal locations at this AOPI, which were sufficient to determine the presence or absence of PFOS, PFOA, and/or PFBS.

FCR-RFAAP-04

- QA/QC samples (field duplicates, MS, and MSD) proposed at the groundwater sample location RFAAP-TEF-GW-1 were instead collected at RFAAP-31MW1 due to lack of water within the well at the time of the sampling event. QA/QC samples (MS and MSD) proposed at the soil sample location RFAAP-OFS1-SO-1 were instead collected at RFAAP-OFS1-SO-2 due to the field staff encountering refusal earlier than expected.

FCR-RFAAP-05

- One surface water location (RFAAP-OFS1-SW-1) at the Old Fire Station 1, Old Ladder Shed, and Current Storage Shed AOPI was moved to a different location and collected in April 2021 due to no water being present at the time of the sampling event.

FCR-RFAAP-06

- An additional SI sampling event (Phase II) was conducted to determine presence or absence of PFOS, PFOA, and PFBS in groundwater at the Old Fire Station 1, Old Ladder Shed, and Current Storage Shed AOPI and the Old Fire Station 2 AOPI, where groundwater was either not sampled or was not sufficient to determine said presence or absence.

FCR-RFAAP-07

- During the Phase II sampling event, one groundwater sample (RFAAP-OFS1-GW-1) at the Old Fire Station 1, Old Ladder Shed, and Current Storage Shed AOPI was moved less than 30 feet south of the proposed location, remaining downgradient of the AOPI.

6.3.5 Decontamination

Non-dedicated reusable sampling equipment (e.g., stainless-steel trowels, hand augers, drill cutting shoes and casing, screen-point samplers, water-quality meters, turbidimeters, gas meters) that came into direct contact with sampling media was decontaminated before first use, between sampling locations/intervals, and before demobilization in accordance with P-09, TGI - Groundwater and Soil Sampling Equipment Decontamination (Arcadis 2019, Appendix A).

6.3.6 Investigation-Derived Waste

IDW, including groundwater purged during sampling and water from decontamination of drill tooling were containerized and temporarily stored at an on-post staging area approved by the installation. Confirmation samples were sent to the lab to determine if PFOS, PFOA, and PFBS or other site-specific contaminants of concern were present in IDW. BAE Systems, Inc. took possession of the IDW on 06 January 2021. BAE Systems, Inc. then discharged the wastewater into the wastewater treatment systems. Non-IDW wastes were removed from the AOPIs immediately upon completion of each day's field activities. A post-activity inspection was conducted by the field team lead/regional lead and SSHO identified in the QAPP Addendum to ensure the location was left clean. Equipment IDW includes personal protective equipment and other disposable materials (e.g., gloves, plastic sheeting, Lexan tubes, and high-density polyethylene and silicon tubing) that may come in contact with sampling media. Analytical results for IDW samples collected during the SI are discussed in **Section 7.8**.

6.4 Data Analysis

The subsections below summarize the laboratory analytical methods and the methodology used to evaluate data collected during the SI through data verification and usability assessments (as completed by a project chemist, independent of the project team).

6.4.1 Laboratory Analytical Methods

Analytical samples collected during the SI were submitted to Pace South Carolina (formerly Shealy Environmental Services, Inc.), an ELAP-accredited laboratory for PFAS analysis, including PFOS, PFOA, and PFBS, by liquid chromatography with tandem mass spectrometry. Laboratory analyses associated with the SI were completed in accordance with Worksheets #12.1 through #12.5 in the PQAPP (Arcadis 2019). Eighteen PFAS-related compounds, including PFOS, PFOA, and PFBS, were analyzed for in groundwater, soil, surface water, and sediment samples using an analytical method that is ELAP-accredited and compliant with QSM 5.3 (DoD and Department of Energy 2019), Table B-15.

Additionally, the following general chemistry and physical characteristic analyses were completed for select soil and sediment samples in accordance with Worksheet #18 of the QAPP Addendum (Arcadis 2020) by the analytical method noted:

- TOC by Solid Waste Test Method 846 9060A
- Grain size analysis by American Society for Testing and Materials D422-63
- pH by Solid Waste Test Method 846 9045D.

These data are collected as they may be useful in future fate and transport studies.

The laboratory limit of detection (LOD) is defined as "the lowest concentration for reliable reporting of a non-detect of a specific analyte in a specific matrix with a specific method at 99 percent confidence" (DoD 2017). The lowest concentration of a substance that produces a quantitative result within specified limits of precision and bias is known as the limit of quantitation (LOQ; DoD 2017). Concentrations detected between the LOD and LOQ, therefore, are considered estimates and are qualified as such on laboratory analytical reports. Instrument-specific detection limits (e.g., the smallest analyte concentration that can be

demonstrated to be different from zero or a blank concentration with 99% confidence; DoD 2017), as provided for each analyte by the laboratory, are reported along with the LODs and LOQs in the laboratory analytical reports included in the Data Usability Summary Report (DUSR) (**Appendix L**).

6.4.2 Data Validation

All analytical data generated during the SI, except grain size, were verified and validated in accordance with the data verification procedures described in Worksheets #34 through #36 of the PQAPP (Arcadis 2019). Each laboratory data package/sample delivery group underwent Stage 3 data validation in accordance with DoD QSM 5.3 (DoD and Department of Energy 2019). Additionally, 10% of the data underwent Stage 4 data validation. Copies of the data validation reports for each sample delivery group are included as attachments to the DUSR in **Appendix L**. The Level IV analytical reports are included within **Appendix M** in the final electronic deliverable only.

6.4.3 Data Usability Assessment and Summary

A data usability assessment was completed for all analytical data associated with SI sampling at RFAAP. Documentation generated during the data usability assessments, which were compiled into a DUSR (**Appendix L**), was prepared in accordance with the USACE Engineer Manual 200-1-10 (USACE 2005), the Final DoD General Data Validation Guidelines (DoD 2019) and the Final DoD Data Validation Guidelines Module 3: Data Validation Procedure for Per-and Polyfluoroalkyl Substances Analysis by QSM Table B-15 (DoD 2020), that reviewed precision, accuracy, completeness, representativeness, comparability, and sensitivity. A statement of overall data usability is included in the DUSR.

Based on the final data usability assessment, the environmental data collected at RFAAP during the SI were found to be acceptable and usable for this SI evaluation with the qualifications documented in the DUSR and its associated data validation reports (**Appendix L**), and as indicated in the full analytical tables (**Appendix M**) provided for the SI results. These data are of sufficient quality to meet the objectives and requirements of the PQAPP (Arcadis 2019) and RFAAP QAPP Addendum (Arcadis 2020). Data qualifiers applied to laboratory analytical results for samples collected during the SI at RFAAP are provided in the data tables, data validation reports, and the Data Usability Summary Table located at the end of DUSR. Qualifiers for data shown on figures are defined in the notes of figures.

6.5 Office of the Secretary of Defense Risk Screening Levels

The OSD risk screening levels for PFOS, PFOA, and PFBS in groundwater (tap water) and soil were calculated using the USEPA's RSL calculator for residential and industrial/commercial worker receptor scenarios and current toxicity values. These risk screening levels are shown in **Table 6-2**.

Table 6-2 OSD Risk Screening Levels Calculated for PFOS, PFOA, and PFBS in Tap Water and Soil Using USEPA's Regional Screening Level Calculator

Chemical	Residential Scenario Risk Screening Levels Calculated Using USEPA RSL Calculator	Industrial/Commercial Scenario Risk Screening Levels Calculated Using USEPA RSL Calculator

	Tap Water (ng/L or ppt) [1]	Soil (mg/kg or ppm) [1,2]	Soil (mg/kg or ppm) [1,2]
PFOS	40	0.13	1.6
PFOA	40	0.13	1.6
PFBS	600	1.9	25

Notes:
1. Risk screening levels for tap water and soil provided by the OSD. 2021. Memorandum: Investigating Per- and Polyfluoroalkyl Substances within the Department of Defense Cleanup Program. September 15 (**Appendix A**).
2. All soil and sediment data will be screened against both the Residential Scenario and Industrial/Commercial risk screening levels (if collected from less than 2 feet bgs), regardless of the current and projected land use of the AOPI.
mg/kg = milligram per kilogram
ng/L = nanograms per liter
ppm = parts per million
ppt = parts per trillion

The OSD residential tap water risk screening levels will be used to compare all groundwater samples for this Army PFAS PA/SI. While the current and most likely future land uses of the AOPIs at RFAAP are industrial/commercial, both residential and industrial/commercial soil risk screening levels for PFOS, PFOA, and PFBS will be used to evaluate detected soil concentrations. The data from the SI sampling event are compared to the OSD risk screening levels in **Section 7**. If concentrations of PFOS, PFOA, or PFBS are detected greater than the applicable OSD risk screening levels, further study in a remedial investigation is recommended in **Section 8**.

7 SUMMARY AND DISCUSSION OF SI RESULTS

This section summarizes the analytical results obtained from samples collected during the SI at RFAAP (field duplicate results are provided in the associated tables). Sampled media and QA/QC samples were analyzed for the constituents prescribed per Worksheet #18 of the QAPP Addendum (Arcadis 2020). The sample results discussion below focuses on the PFOS, PFOA, and PFBS analytical results because they have OSD risk screening levels. The Army will make subsequent investigation decisions based on these constituents' concentrations relative to the OSD risk screening levels.

Tables 7-1 through **7-4** provide a summary of the groundwater, soil, surface water, and sediment analytical results for PFOS, PFOA, and PFBS. **Table 7-5** summarizes AOPIs and whether their SI results exceed the OSD risk screening levels. **Appendix M** includes the full suite of analytical results for these media, as well as for the QA/QC samples. An overview of AOPIs at RFAAP with OSD risk screening level exceedances is depicted on **Figure 7-1**. **Figures 7-2** through **7-6** show the PFOS, PFOA, and PFBS analytical results in groundwater, soil, surface water, and sediment for each AOPI. Non-detected results are reported as less than the LOQ. Detections of PFOS, PFOA, and/or PFBS greater than the applicable OSD risk screening levels are highlighted in summary tables and on figures. Final qualifiers applied to the data by the laboratory and the project chemist (as defined in **Section 6.4.3**) are presented on the analytical tables. Groundwater and surface water data collected during the SI are reported in ng/L, or parts per trillion, and soil and sediment data are reported in mg/kg, or parts per million.

Field parameters measured for groundwater during low-flow purging and sample collection and for surface water during sample collection are provided on the field forms in **Appendix J**. Soil and sediment descriptions are provided on the field forms in **Appendix J**. The results of the SI are grouped by AOPI and discussed for each medium as applicable. Groundwater was generally first encountered at depths of approximately 5 to 15 feet bgs.

Table 7-5 AOPIs and OSD Risk Screening Level Exceedances

AOPI Name	OSD Exceedances (Yes/No)
Teflon Coating Facility	Yes
Old Fire Station 1, Old Ladder Shed, and Current Storage Shed	No
Old Fire Station 2	No
River Warehouse	No
Current Fire Station	No

7.1 Teflon Coating Facility

The subsections below summarize the groundwater, soil, surface water, and sediment PFOS, PFOA, and PFBS analytical results associated with Teflon Coating Facility AOPI.

7.1.1 Groundwater

Groundwater samples were collected from two locations via DPT drilling and temporary well sampling at the Teflon Coating Facility AOPI in the inferred downgradient direction (RFAAP-TEF-GW-1, RFAAP-TEF-GW-3; **Figure 7-2).** The groundwater samples were collected at the first-encountered groundwater in the boring. A summary of PFOS, PFOA, and PFBS groundwater analytical results is provided in **Table 7-1**. PFOS, PFOA, and/or PFBS were detected in the sample collected.

PFOS was detected but below the OSD risk screening level of 40 ng/L at RFAAP-TEF-GW-1 (20 ng/L) and RFAAP-TEF-GW-3 (8.3 ng/L). PFOA was detected but below the OSD risk screening level of 40 ng/L at RFAAP-TEF-GW-1 (8.5 ng/L). PFOA was detected above the OSD risk screening level of 40 ng/L at RFAAP-TEF-GW-3 (72 ng/L). PFBS was detected but below the OSD risk screening level of 600 ng/L at RFAAP-TEF-GW-1 (2 J [the analyte was positively identified; however, the associated numerical value is an estimated concentration only] ng/L). PFBS was not detected at RFAAP-TEF-GW-3.

7.1.2 Soil

Soil samples were collected via hand auger from four locations at the Teflon Coating Facility AOPI (RFAAP-TEF-SO-1, RFAAP-TEF-SO-2, RFAAP-TEF-SO-3, RFAAP-TEF-SO-4; **Figure 7-2).** Boring locations were positioned adjacent (downgradient) to the Teflon Coating Facility and each boring included one surface soil sample from approximately 0 to 2 feet bgs. Borings RFAAP-TEF-SO-1 and RFAAP-TEF-SO-3 were co-located with a groundwater sample. A summary of PFOS, PFOA, and PFBS soil analytical results is provided in **Table 7-2.**

PFOS was detected but below the residential OSD risk screening level of 0.13 mg/kg at RFAAP-TEF-SO-1 (0.0016 mg/kg) and at RFAAP-TEF-SO-4 (0.00073 J mg/kg). PFOS was not detected at RFAAP-TEF-SO-2 and RFAAP-TEF-SO-3. PFOA and PFBS were not detected in any of the soil samples.

7.1.3 Surface Water

One surface water sample was collected from the Teflon Coating Facility AOPI (RFAAP-TEF-SW-1; **Figure 7-2).** This surface water sample was collected from the middle point of the water column. The sample was collected downstream from the Stroubles Creek Outfall. A summary of PFOS, PFOA, and PFBS water analytical results is provided in **Table 7-3**.

PFOS, PFOA, and PFBS were not detected.

7.1.4 Sediment

One sediment sample was collected from one location at the Teflon Coating Facility AOPI (RFAAP-TEF-SD-1; **Figure 7-2**)**.** The sediment sample was taken from the 0 to 1-foot interval at Stroubles Creek. A summary of PFOS, PFOA, and PFBS sediment analytical results is provided in **Table 7-4.**

PFOS, PFOA, and PFBS were not detected.

7.2 Old Fire Station 1, Old Ladder Shed, and Current Storage Shed

The subsections below summarize the soil and surface water PFOS, PFOA, and PFBS analytical results associated with Old Fire Station 1 AOPI.

7.2.1 Groundwater

One groundwater sample was collected via DPT drilling and temporary well sampling at the Old Fire Station 1, Old Ladder Shed, and Current Storage Shed AOPI (RFAAP-OFS1-GW-1; **Figure 7-3**). The groundwater sample was collected at the first-encountered groundwater in the boring. A summary of PFOS, PFOA, and PFBS groundwater analytical results is provided in **Table 7-1**.

PFOS was detected but below the OSD risk screening level of 40 ng/L in the groundwater sample (33 ng/L). PFOA was detected but below the OSD risk screening level of 40 ng/L in the groundwater sample (4.0 ng/L). PFBS was detected but below the OSD risk screening level of 600 ng/L in the groundwater sample (4.0 ng/L).

7.2.2 Soil

Soil samples were collected via hand auger from five locations at the Old Fire Station 1, Old Ladder Shed, and Current Storage Shed AOPI (RFAAP-OFS1-SO-1, RFAAP-OFS1-SO-2, RFAAP-OFS1-SO-3, RFAAP-OFS1-SO-4, RFAAP-OFS1-SO-5; **Figure 7-3).** Each boring included one surface soil sample from approximately 0 to 2 feet bgs. A summary of PFOS, PFOA, and PFBS soil analytical results is provided in **Table 7-2.**

PFOS was detected but below the residential OSD risk screening level of 0.13 mg/kg at RFAAP-OFS1-SO-1 (0.00063 J mg/kg), RFAAP-OFS1-SO-3 (0.043 mg/kg), RFAAP-OFS1-SO-4 (0.00074 J mg/kg), and RFAAP-OFS1-SO-5 (0.0091 J mg/kg). PFOS was not detected at RFAAP-OFS1-SO-2. PFOA was detected but below the residential OSD residential risk screening level of 0.13 mg/kg at RFAAP-OFS1-SO-3 (0.0009 J mg/kg). PFOA was not detected at any other sample. PFBS was not detected in any of the soil samples.

7.2.3 Surface Water

One surface water sample was collected from the Old Fire Station 1, Old Ladder Shed, and Current Storage Shed AOPI (RFAAP-OFS1-SW-1; **Figure 7-3).** This surface water sample was collected from the middle point of the water column. The sample was collected from a drainage/effluent feature west of the AOPI. This feature is suspected to contain surface water discharge from this AOPI. A summary of PFOS, PFOA, and PFBS water analytical results is provided in **Table 7-3**.

PFOS was detected but below the OSD risk screening level of 40 ng/L (4.8 ng/L). PFOA and PFBS were not detected.

7.3 Old Fire Station 2

The subsections below summarize the groundwater and soil PFOS, PFOA, and PFBS analytical results associated with Old Fire Station 2 AOPI.

7.3.1 Groundwater

One groundwater sample was collected from an existing monitoring well and one groundwater sample was collected via DPT drilling and temporary well sampling at the Old Fire Station 2 AOPI (RFAAP-31MW1; **Figure 7-4**). The groundwater sample from the monitoring well was collected from the middle of the screened interval and the sample from the temporary well was collected at the first-encountered groundwater in the boring (RFAAP-OFS2-GW-1; **Figure 7-4**). A summary of PFOS, PFOA, and PFBS groundwater analytical results is provided in **Table 7-1**.

PFOS was detected but below the OSD risk screening level of 40 ng/L in sample RFAAP-OFS2-GW-1 (5.4 J- [the result is an estimated quantity; the result may be biased low] ng/L). PFOA was detected but below the OSD risk screening level of 40 ng/L in the groundwater sample (2.2 J- ng/L). PFBS was not detected in either sample.

7.3.2 Soil

Soil samples were collected via hand auger from three locations at the Old Fire Station 2 AOPI (RFAAP-OFS2-SO-1, RFAAP-OFS2-SO-2, RFAAP-OFS2-SO-3; **Figure 7-4).** Each boring included one surface soil sample from approximately 0 to 2 feet bgs. A summary of PFOS, PFOA, and PFBS soil analytical results is provided in **Table 7-2**.

PFOS was detected but below the residential OSD risk screening level of 0.13 mg/kg at RFAAP-OFS2-SO-3 (0.0011 mg/kg). PFOS was not detected at RFAAP-OFS2-SO-1 or RFAAP-OFS2-SO-2. PFOA and PFBS were not detected in any of the soil samples.

7.4 River Warehouse

The subsections below summarize the groundwater and soil PFOS, PFOA, and PFBS analytical results associated with River Warehouse AOPI.

7.4.1 Groundwater

Groundwater samples were collected from one location via DPT drilling and temporary well sampling at the River Warehouse AOPI (RFAAP-RW-GW-1; **Figure 7-5**). The groundwater samples were collected at the first-encountered groundwater in the boring. A summary of PFOS, PFOA, and PFBS groundwater analytical results is provided in **Table 7-1**.

PFOS was detected but below the OSD risk screening level of 40 ng/L in the groundwater sample (30 ng/L). PFOA and PFBS were not detected.

7.4.2 Soil

Soil samples were collected via hand auger from four locations at the River Warehouse AOPI (RFAAP-RW-SO-1, RFAAP-RW-SO-2, RFAAP-RW-SO-3, RFAAP-RW-SO-4; **Figure 7-5**). Each boring included one surface soil sample from approximately 0 to 2 feet bgs. Boring RFAAP-RW-1-SO was co-located with a groundwater sample. A summary of PFOS, PFOA, and PFBS soil analytical results is provided in **Table 7-2**.

PFOS was detected but below the residential OSD risk screening level of 0.13 mg/kg at RFAAP-RW-SO-2 (0.00098 J mg/kg). PFOS was not detected at any other sample. PFOA and PFBS were not detected in any of the soil samples.

7.5 Current Fire Station

The subsections below summarize the soil PFOS, PFOA, and PFBS analytical results associated with Current Fire Station AOPI. Groundwater was not sampled at this AOPI due to the heavily karstified geology and low depth to water. Surface water was not sampled due to the absence of water at the time of the sampling event. However, groundwater and potentially surface water may still be sampled, if deemed necessary, in a future investigation.

7.5.1 Soil

Soil samples were collected via hand auger from four locations at the Current Fire Station AOPI (RFAAP-CFS-SO-1, RFAAP-CFS-SO-2, RFAAP-CFS-SO-3, RFAAP-CFS-SO-4; **Figure 7-6).** Each boring included one surface soil sample from approximately 0 to 2 feet bgs. A summary of PFOS, PFOA, and PFBS soil analytical results is provided in **Table 7-2**.

PFOS was detected but below the residential OSD risk screening level of 0.13 mg/kg at RFAAP-CFS-SO-1 (0.0006 J mg/kg). PFOS was not detected at any other sample. PFOA and PFBS were not detected in any of the soil samples.

7.6 Boundary Sampling

The subsections below summarize the soil PFOS, PFOA, and PFBS analytical results associated with the Boundary Sampling surface water locations. Boundary samples were collected to assess if analytes of interest are leaving the site in surface water.

7.6.1 Surface Water

Two surface water samples were collected from the Boundary Sampling Area (RFAAP-NR-SW-1, RFAAP-NR-SW-2; **Figure 7-7).** This surface water sample was collected from the middle point of the water column. The sample was collected from a drainage/effluent feature west of the AOPI. A summary of PFOS, PFOA, and PFBS water analytical results is provided in **Table 7-3**.

PFOS, PFOA, and PFBS were not detected in either sample.

7.7 Dedicated Equipment Background Samples

One DEB was collected (RFAAP-31MW1-DEB-1-010521) from groundwater potentially affected by the transducer inside of well 31MW1 at the Old Fire Station 2 AOPI on 05 January 2021. PFOS, PFOA, and PFBS were not detected, and it was determined that the dedicated equipment did not affect the sample collected from well 31MW1 (RFAAP-31MW1-010521).

7.8 Investigation Derived Waste

A composite sample of the purge and decontamination wastewater was collected from the 5-gallon drum (which contained approximately two gallons of liquid), which has been disposed of by BAE Systems, Inc. at the wastewater treatment facility onsite. The full analytical results (i.e., for all constituents analyzed) for IDW samples collected during the SI are included in **Appendix M**.

7.9 TOC, pH, and Grain Size

In addition to sampling soil for PFOS, PFOA, and PFBS, one soil sample per AOPI was analyzed for TOC, pH, moisture content, and grain size data as they may be useful in future fate and transport studies. The TOC in the soil samples ranged from 5,470 to 51,900 mg/kg. The TOC at this installation was higher than typically observed in topsoil: 5,000 to 30,000 mg/kg. The combined percentage of fines (i.e., silt and clay) in soils at RFAAP ranged from 4.6 to 38.1% with an average of 16.86%. In general, PFAS constituents tend to be more mobile in soils with less than 20% fines (silt and clay) and lower TOC. The percent moisture of the soil 18.25% was typical for clay (0 to 20%). The pH of the soil was neutral (~7). Based on these geochemical and physical soil characteristics observed underlying the installation during the SI, PFAS constituents are relatively more mobile in soils with low percentages of fines, while elevated TOC may retard transport of the constituents from soil to groundwater.

7.10 Blank Samples

PFOS, PFOA, and PFBS were not detected in any of the QA/QC samples collected during the SI work. The full analytical results for blank samples collected during the SI are included in **Appendix M**.

7.11 Conceptual Site Models

The preliminary CSMs presented in the QAPP Addendum (Arcadis 2020) were re-evaluated and updated, if necessary, based on the SI sampling results. The CSMs presented on **Figures 7-8** through **7-10** and in this section therefore represent the current understanding of the potential for human exposure. For some AOPIs, the CSM is the same and thus shown on the same figure.

Many of the PFAS constituents found in AFFF and metal plating operations are surfactants (which do not volatilize) and are found in a charged or ionic state at environmentally-relevant pH (i.e., pH 5 to 9 standard units). PFOS, PFOA, and PFBS are each negatively charged at environmentally-relevant pH. The media potentially affected by PFOS, PFOA, PFBS releases at Army installations are soil, groundwater, surface water, and sediment. Once released to the environment, a primary factor that inhibits the movement of PFAS constituents is the presence of organic matter and organic co-constituents in soils and sediments. Generally, PFAS constituents are mobile in the potentially affected media, and they are not known to be fully broken down by natural processes.

Based on the use, storage, and/or disposal of PFAS-containing materials at the AOPIs, affected media are likely to consist of soil, groundwater, surface water, and sediment.

Release and transport mechanisms include dissolution/desorption from soil to groundwater, transport via sediment carried in and dissolution to stormwater and surface water, discharge/recharge between

groundwater and surface water, and adsorption/desorption between surface water and sediment. Generic categories of potential human receptors and their associated exposure scenarios that are typically evaluated in a CERCLA human health risk assessment were considered and include on-installation site workers (e.g., industrial/commercial workers, utility workers, or future construction workers who could be exposed to chemicals in soil at an AOPI or to chemicals in tap water in an industrial/commercial building), on-installation residents (e.g., adults and children who could be exposed to chemicals in tap water in a residence), and on-installation recreational users (e.g., hikers or hunters who could be exposed to chemicals in waterways at an installation). Off-installation receptor types could include drinking water receptors (i.e., commercial/industrial workers or residents) and recreational users.

Human exposure pathways are shown as “complete”, “potentially complete”, or “incomplete” on the CSM figures. A complete exposure pathway consists of a constituent source and release mechanism, a transport or retention medium, an exposure point where human contact with the contaminated medium could occur, and an exposure route at the exposure point. If any of these elements is missing, the exposure pathway is incomplete. Pathways are “potentially complete” where data are insufficient to conclude the pathway is either “complete” or “incomplete”. Additionally, the CSMs do not include ecological receptors and exposure pathways. The potential for ecological exposures to PFOS, PFOA, and PFBS may be evaluated at a future date if those pathways warrant further consideration.

CSMs were developed for each individual AOPI and were combined where source media, potential migration pathways and exposure media, and human exposure pathway determinations are congruent. The following exposure pathway determinations apply to all CSMs:

- There are no residents on the installation; therefore, all receptor pathways for on-installation residents are incomplete.
- PFOS, PFOA, and/or PFBS were detected in soil at all AOPIs and site workers could contact constituents in soil via incidental ingestion, dermal contact and inhalation of dust. Therefore, the soil exposure pathway for on-installation site workers is complete. The AOPIs are not recreational sites and are wholly located within the installation boundary. Therefore, the soil exposure pathways for on-installation recreational users and for off-installation receptors are incomplete at all AOPIs.
- PFOS, PFOA, and/or PFBS were detected in groundwater at the Teflon Coating Facility and River Warehouse AOPIs. At Old Fire Station 2 PFOS, PFOA, and/or PFBS were not detected in groundwater at a nearby monitoring well; however, PFOS was detected in soil at the AOPI and could potentially migrate to groundwater. Groundwater was not sampled at all other AOPIs, including the Old Fire Station 1, Old Ladder Shed, and Storage Shed, Old Fire Station 2, and Current Fire Station AOPIs. There are no on-post drinking water wells. However, the groundwater exposure pathways (via drinking water ingestion and dermal contact) for site workers are potentially complete to account for potential future use of the downgradient on-post groundwater. Recreational users are not likely to contact groundwater. Therefore, the groundwater exposure pathway for on-installation recreational users is incomplete.
- PFOS, PFOA, and/or PFBS were detected in groundwater at the Teflon Coating Facility and River Warehouse AOPIs. Due to the absence of land use controls preventing potable use of groundwater in this area, the groundwater exposure pathway (via drinking water ingestion and dermal contact) for off-installation receptors is potentially complete. In addition, there is potential for the groundwater to move in unexpected pathways due to karst geology and there are two

known water supply wells in Giles County near the downstream flow path for the New River within five miles of the installation (i.e. Blue Ridge Christian Camp and New River Junction Campground).

- Due to the karst geology and the local fault zone in the vicinity of RFAAP, groundwater originating at the AOPIs may discharge to surface water that flows off-post via the New River. There are surface water intakes downstream of the installation potentially used for off-installation drinking water. Therefore, the surface water exposure pathway (via drinking water ingestion and dermal contact) for off-installation drinking water receptors is potentially complete. Recreational users off-post could contact constituents in New River through incidental ingestion and dermal contact; therefore, the surface water and sediment exposure pathways for off-installation recreational users are potentially complete.

Additional exposure pathway descriptions for each CSM are listed below by figure.

Figures 7-8 and 7-9 show two groups of AOPIs with different source media but have the same exposure pathways. **Figure 7-8** shows the CSM for the Teflon Coating Facility AOPI, where a Teflon coating operation was located, and Teflon primer was sprayed on various items. **Figure 7-9** shows the CSM for the Old Fire Station 2, River Warehouse, and Current Fire Station AOPIs, where AFFF was thought to be historically released to soil and/or paved surfaces from AFFF stored in tanks, drums, and/or fire trucks.

- These AOPIs are within a 5-mile proximity of the on-installation New River surface water intake used for on-site drinking water. Due to complex karst geology and potential (undocumented) spring discharges into the New River upstream of the drinking water plant, the surface water exposure pathways via drinking water ingestion and dermal contact for on-installation site workers are potentially complete. Recreational users could contact constituents in Stroubles Creek or the New River through incidental ingestion and dermal contact. Therefore, the surface water and the sediment exposure pathways are potentially complete for the on-site recreational user.

Figure 7-10 shows the CSM for the Old Fire Station 1, Old Ladder Shed, and Current Storage Shed AOPI. AFFF was thought to be historically released to soil and/or paved surfaces from AFFF stored in tanks, drums, and/or fire trucks.

- PFOS was detected in a surface water sample potentially downgradient of the Old Fire Station 1, Old Ladder Shed, and Current Storage Shed AOPI. This AOPIs is within 5-miles of the on-installation New River surface water intake used for on-site drinking water. Due to complex karst geology and potential (undocumented) spring discharges into the New River upstream of the drinking water plant, the surface water exposure pathways via drinking water ingestion and dermal contact for on-installation site workers are potentially complete. Recreational users could contact constituents in Stroubles Creek or the New River through incidental ingestion and dermal contact. Therefore, the surface water exposure pathways for on-installation recreational users are complete and the sediment exposure pathways are potentially complete.

Following the SI sampling, 5 of the 5 AOPIs were considered to have complete or potentially complete exposure pathways. Although the CSMs indicate complete or potentially complete exposure pathways

may exist, the recommendation for remedial investigation is based on the comparison of analytical results for PFOS, PFOA, and PFBS to the OSD risk screening levels (**Table 6-2**).

8 CONCLUSIONS AND RECOMMENDATIONS

The PFAS PA/SI included two distinct efforts. The PA identified AOPIs at RFAAP based on the use, storage, and/or disposal of PFAS-containing materials, in accordance with the 2018 Army Guidance for Addressing Releases of Per-and Polyfluoroalkyl Substances (Army 2018). The SI included multi-media sampling at AOPIs to determine whether or not a release of PFOS, PFOA, and PFBS to the environment occurred.

OSD provided residential risk screening levels based on the USEPA oral reference dose for PFOS, PFOA, and PFBS in soil and groundwater (tap water) and industrial/commercial risk screening levels for PFOS, PFOA, and PFBS in soil (**Appendix A**). A combination of document review, internet searches, interviews with installation personnel, and an installation site visit were used to identify specific areas of suspected PFOS, PFOA, and PFBS use, storage, and/or disposal at RFAAP. Following the evaluation, five AOPIs were identified.

RFAAP has no on-installation potable or drinking water supply wells. There are two known water supply wells in Giles County near the downstream flow path for the New River within 5 miles of the installation (i.e., Blue Ridge Christian Camp and New River Junction Campground) with potential for more private wells. The AOPIs are within a 5-mile proximity of the on-installation New River surface water intake used for on-site drinking water.

All AOPIs were sampled during the SI at RFAAP to identify presence or absence of PFOS, PFOA, and PFBS at each AOPI. The SI scope of work was completed in accordance with the Final PQAPP (Arcadis 2019) and the RFAAP QAPP Addendum (Arcadis 2020).

Groundwater samples were collected at three AOPIs. Samples were not collected at each AOPI due to the depth of groundwater, as well as the complexity of the heavily karstified geology, which limits certainty in determining the source of PFAS constituents. The presence of PFOS, PFOA, and/or PFBS was identified in groundwater at two of three AOPIs. The highest PFOS concentrations in groundwater were observed at the River Warehouse AOPI at 30 ng/L. The highest PFOA and PFBS concentrations in groundwater were observed at the Teflon Coating Facility AOPI at 72 ng/L and 2.0 J ng/L, respectively. In total, one AOPI had groundwater exceedances above the OSD risk screening levels for PFOA (40 ng/L). PFOS and PFBS did not exceed OSD risk screening levels in any groundwater samples.

Soil samples were collected at all five AOPIs. The presence of PFOS was identified in soil at all five AOPIs and the presence of PFOA in one AOPI. The highest PFOS and PFOA concentrations in soil were observed at the Old Fire Station 1, Old Ladder Shed, and Current Storage Shed AOPI at 0.043 mg/kg and 0.0009 J mg/kg, respectively. PFBS was not detected in any soil samples. No AOPIs had soil exceedances above OSD risk screening levels for PFOS and PFOA (0.13 mg/kg for residential and 1.6 for industrial/commercial).

Surface water samples were collected at two AOPIs and for the Boundary Sampling area, and the presence of PFOS was identified in one AOPI. The highest PFOS concentrations in surface water were observed at the Old Fire Station 1, Old Ladder Shed, and Current Storage Shed AOPI at 4.8 ng/L, which did not exceed the OSD risk screening level for PFOS (40 ng/L). PFOA and PFBS were not detected in any surface water samples.

Sediment samples were collected at one AOPI. PFOS, PFOA, and PFBS were not detected in this sediment sample.

Following the SI sampling, all five AOPIs with confirmed PFOS, PFOA, and/or PFBS presence were considered to have complete or potentially complete exposure pathways. The soil exposure pathway for on-installation site workers was complete for all five AOPIs. The groundwater exposure pathway for on-installation site workers (via drinking water ingestion and dermal contact) was potentially complete at all five AOPIs. Due to a lack of land use controls off-installation, the groundwater exposure pathway for off-installation drinking water receptors was also potentially complete at all five AOPIs. The surface water exposure pathways (via drinking water ingestion and dermal contact) for on-installation site workers was potentially complete for all five AOPIs. The surface water exposure pathways (via incidental ingestion and dermal contact) were potentially complete for four AOPIs and complete for one AOPI for on-installation recreational receptors. The sediment exposure pathways (via incidental ingestion and dermal contact) were potentially complete for all five AOPIs for recreational users. Additionally, the surface water and sediment exposure pathways were potentially complete for all five AOPIs for off-installation receptors.

Although the CSMs indicate complete or potentially complete exposure pathways may exist, the recommendation for future study in a remedial investigation or no action at this time is based on the comparison of the SI analytical results for PFOS, PFOA, and PFBS to the OSD risk screening levels (**Table 6-2**). **Table 8-1** below summarizes the AOPIs identified at RFAAP, PFOS, PFOA, and PFBS sampling and recommendations for each AOPI; further investigation is warranted at RFAAP. In accordance with CERCLA, site-specific risk will be assessed during a future phase to evaluate whether remedial actions are required.

Table 8-1 Summary of AOPIs Identified during the PA, PFOS, PFOA, and PFBS Sampling at RFAAP, and Recommendations

AOPI Name	PFOS, PFOA, and/or PFBS detected greater than OSD Risk Screening Levels? (Yes/No/NA/ND/NS)				Recommendation
	GW	SO	SW	SE	
Teflon Coating Facility	Yes	No	ND	NA	Further study in a remedial investigation
Old Fire Station 1, Old Ladder Shed, Current Storage Shed	No	No	No	NA	No action at this time
Old Fire Station 2	No	No	NS	NS	No action at this time
River Warehouse	No	No	NS	NS	No action at this time
Current Fire Station	NS	No	NS	NS	Supplemental groundwater sampling is recommended

Notes:
Light gray shading – detection greater than the OSD risk screening level
GW – groundwater
NA – not applicable
ND – non-detect

NS – not sampled
SE – sediment
SO – soil
SW – surface water

Data collected during the PA (**Sections 3** through **5**) and SI (**Sections 6** and **7**) were sufficient to draw conclusions and recommendations summarized above. The data limitations relevant to the development of this PA/SI for PFOS, PFOA, and PFBS at RFAAP are discussed below.

Records gathered for the use, storage and/or disposal of PFAS-containing materials were reviewed during the PA process. Documentation specific to AFFF may have been limited (e.g., each AFFF use; procurement records, documentation of AFFF used during crash responses or fire training activities) due to lack of recordkeeping requirements for the full timeline of common AFFF practices. Anecdotal accounts of AFFF use (and therefore likely PFOS, PFOA, and PFBS use) were limited to available installation personnel, whose knowledge of AFFF use may have been restricted by their time spent at the installation or previous roles held that limited their relevant knowledge of potential AFFF (or other PFAS-containing material) use.

A comprehensive well survey was not completed as part of this PA; therefore, the information reviewed regarding off-post wells is limited to what is contained in the off post well search results (**Appendix E**).

The searches for ecological receptors and off-post PFOS, PFOA, and PFBS sources were not exhaustive and were limited to easily identifiable and readily available information evaluated during the relevant documents research, installation personnel interviews, and site reconnaissance.

Finally, the available PFOS, PFOA, and PFBS analytical data is limited to the samples collected during the SI sampling event. Groundwater samples were collected at three of five AOPIs but were not collected at each AOPI due to the depth of groundwater, as well as the complexity of the heavily karstified geology, which limits certainty in determining the source of PFOS, PFOA, and PFBS. Available data, including PFOS, PFOA, and PFBS, is listed in **Appendix M**, which were analyzed per the selected analytical method.

Results from this PA/SI indicate further study in a remedial investigation is warranted at RFAAP in accordance with the guidance provided by the OSD.

Notes:

1. **Bolded** values indicate the result was detected greater than the limit of detection
2. Data are compared to the Office of the Secretary of Defense (OSD) risk screening levels for the residential and commerical/industrial scenario (OSD. 2019), (Memorandum: Investigating Per- and Polyfluoroalkyl Substances within the Department of Defense Cleanup Program. October.).
3. Grey shaded values indicate the result was detected greater than or equal to the OSD risk screening level for the residential scenario. Italicized values indicate the result was detected greater than the OSD risk screening level for the industrial/commercial and residential scenario.

Acronyms/Abbreviations:

AOPI = area of potential interest
FD = field duplicate sample
ID = identification
mg/kg = milligrams per kilogram (parts per million)
N = primary sample
PFAS = per- and polyfluoroalkyl substances
PFBS = perfluorobutanesulfonic acid
PFOA = perfluorooctanoic acid
PFOS = perfluorooctane sulfonate
Qual = qualifier

Qualifier Descriptions:

J = The analyte was positively identified; however the associated numerical value is an estimated concentration only.
U = The analyte was analyzed for but the result was not detected above the limit of quantitation (LOQ)

APPENDIX A

Office of the Secretary of Defense. 2021. Memorandum: Investigating Per- and Polyfluoroalkyl Substances within the Department of Defense Cleanup Program. September 15.

OFFICE OF THE ASSISTANT SECRETARY OF DEFENSE
3500 DEFENSE PENTAGON
WASHINGTON, DC 20301-3500

SUSTAINMENT

MEMORANDUM FOR ASSISTANT SECRETARY OF THE ARMY (INSTALLATIONS, ENERGY AND ENVIRONMENT)
ASSISTANT SECRETARY OF THE NAVY (ENERGY, INSTALLATIONS AND ENVIRONMENT)
ASSISTANT SECRETARY OF THE AIR FORCE (INSTALLATIONS, ENVIRONMENT AND ENERGY)
DIRECTOR, NATIONAL GUARD BUREAU (JOINT STAFF, J8)
DIRECTOR, DEFENSE LOGISTICS AGENCY (INSTALLATION MANAGEMENT)

SUBJECT: Investigating Per- and Polyfluoroalkyl Substances within the Department of Defense Cleanup Program

The Department of Defense (DoD) conducts cleanup under the Comprehensive Environmental Response, Compensation, and Liability Act (CERCLA) and the Defense Environmental Restoration Program (DERP). Our goal is protection of human health and the environment in a risk-based, fiscally-sound manner. This memorandum provides clarifying technical guidance on the investigation of perfluorooctane sulfonate (PFOS), perfluorooctanoic acid (PFOA), and perfluorobutanesulfonic acid (PFBS). This guidance is applicable to investigating PFOS, PFOA, and PFBS at Environmental Restoration Account-funded, Base Realignment and Closure Account-funded, and Operation and Maintenance accounts for the National Guard-funded sites.

This revised memorandum accounts for the updated PFBS screening levels and updates the Assistant Secretary of Defense for Sustainment (ASD(S)) memorandum, "Investigating Per- and Polyfluoroalkyl Substances within the Department of Defense Cleanup Program," October 15, 2019. The U.S. Environmental Protection Agency (EPA) reassessed the toxicity of PFBS in 2021.[1] One purpose of the assessment was to update and replace the existing 2014 Provisional Peer-Reviewed Toxicity Value (PPRTV) assessment for PFBS used by the EPA's Superfund Program. Based on studies published since 2014, the PFBS chronic reference dose (RfD) was reduced and use of the new value results in lower human health screening levels for this chemical.

PFOS, PFOA, and PFBS are part of a larger class of chemicals known as per- and polyfluoroalkyl substances (PFAS). PFAS shall be addressed in the same manner as other contaminants of concern within the DERP.

[1] U.S. EPA. Human Health Toxicity Values for Perfluorobutane Sulfonic Acid and Related Compound Potassium Perfluorobutane Sulfonate. U.S. Environmental Protection Agency, Washington, DC, EPA/600/R-20/345F, April 2021.

Under CERCLA, site-specific regional screening levels[2] (RSLs) for PFOS and PFOA are calculated using the EPA online calculator using the oral RfD of 2E-05 mg/kg-day. The RSL for PFBS is calculated using the EPA PPRTV RfD of 3E-04 mg/kg-day (old value was 2E-02 mg/kg-day), or it may be read off the tables available on the EPA RSL website. The values are provided in the attachment. These RSLs should be used for screening to determine if further investigation in the remedial investigation (RI) phase is warranted or if the site can proceed to site closeout. When multiple PFAS are encountered at a site, a 0.1 factor is applied to the screening level when it is based on noncarcinogenic endpoints. For example, in cases where there are multiple PFAS, the screening level for PFOS and PFOA individually in tap water is 40 parts per trillion (ppt) (0.1 x 400 ppt = 40 ppt) and for PFBS it is 600 ppt (old value was 40,000 ppt).

During the RI phase, the RfDs for PFOS, PFOA, and PFBS and the oral cancer slope factor (CSF) for PFOA of 0.07 $(mg/kg\text{-}day)^{-1}$ will be used to conduct site specific risk assessments in accordance with Risk Assessment Guidance for Superfund Volume I, Part A (EPA/540/1-89/002, December 1989).[3] Site-specific risk assessment results will be used to determine if any necessary remedial actions are required in accordance with CERCLA, DERP, and the National Oil and Hazardous Substances Pollution Contingency Plan (NCP).

This guidance is effective immediately and supersedes and cancels the ASD(S) memorandum, "Investigating Per- and Polyfluoroalkyl Substances within the Department of Defense Cleanup Program," October 15, 2019. The point of contact for this matter is Ms. Alexandria Long, Office of the Deputy Assistant Secretary of Defense for Environment and Energy Resilence, at 703-571-9061 or alexandria.d.long.civ@mail.mil.

Steven J. Morani
Principal Deputy Assistant Secretary of Defense
for Sustainment (Logistics)
Acting Assistant Secretary of Defense for
Sustainment

Attachment:
As stated

[2] For sites on the National Priorities List, the DoD Components will use the EPA site specific screening levels, if provided.
[3] Currently there are only three PFAS – PFOS, PFOA, and PFBS – with established toxicity values that DoD can use to perform a baseline risk assessment to determine whether remedial action is needed under CERCLA.

Attachment: Risk Screening Levels Calculated for PFOS, PFOA, PFBS in Groundwater or Soil Using EPA's RSL Calculator

Chemical	Carcinogenic Slope Factor - Oral (SF) $(mg/kg\text{-}day)^{-1}$	Non-Carcinogenic Reference Dose (RfD) (mg/kg-day)	Residential Scenario Screening Levels Calculated Using EPA RSL Calculator								Industrial/Commercial Composite Worker Screening Levels Calculated Using EPA RSL Calculator			
			Tap Water (µg/L or ppb)				Soil (mg/kg or ppm)				Soil (mg/kg or ppm)			
			HQ = 0.1	HQ = 1.0	ILCR = 1E-06	ILCR = 1E-04	HQ = 0.1	HQ = 1.0	ILCR = 1E-06	ILCR = 1E-04	HQ = 0.1	HQ = 1.0	ILCR = 1E-06	ILCR = 1E-04
PFOS	NA	2.00E-05	0.040	0.40	NA	NA	0.13	1.3	NA	NA	1.6	16	NA	NA
PFOA	7.00E-02	2.00E-05	0.040	0.40	1.1	111	0.13	1.3	7.8	775	1.6	16	33	3,280
PFBS	NA	3.00E-04	0.6	6.0	NA	NA	1.9	19	NA	NA	25	250	NA	NA

HQ=Hazard Quotient
ILCR=Incremental Lifetime Cancer Risk
NA=Not available/applicable

NOTES:

- The table represents screening levels based on residential and industrial/commercial worker receptor scenarios for either direct ingestion of groundwater (residential scenario only) or incidental ingestion of contaminated soil (both residential and composite worker scenarios).
- All values were calculated using slope factors or reference doses for PFOS and PFOA published by EPA Office of Water in support of the LHA, and default exposure assumptions for each potential receptor scenario, contained in EPA's RSL Calculator on April 6, 2018.
- Peer reviewed toxicity values considered valid for risk assessment exist for PFBS, and the screening levels may be found in EPA's RSL table or EPA's RSL calculator used to develop them.
- Other potential receptor scenarios (e.g., recreational user, site trespasser, construction worker) are not included in the above table, but could be relevant receptors at a site potentially contaminated with PFOS, PFOA and/or PFBS. These receptors, and their associated exposure scenarios, should be further considered in the scoping phase and completion of the Baseline Human Health Risk Assessment typically completed during an RI.
- The shaded values represent conservative screening levels for PFOS and PFOA in groundwater or soil that when exceeded should be considered a contaminant of potential concern in the risk assessment process and calculations of site-specific risk posed.

APPENDIX B

Preliminary Assessment/Site Inspection Quality Control Checklist

Appendix B
Installation Preliminary Assessment / Site Inspection Quality
Per- and Polyfluoroalkyl Substances Preliminary Assessment/Site Inspection
Radford Army Ammunition Plant, Virginia

Action Item *(Target Date)*	Comments	Completed Date	Completed By
Preliminary Assessment			
Pre-Site Visit			
Kickoff teleconference *(6 weeks prior to site visit)*	Arcadis U.S., Inc. (Arcadis) hosted a teleconference to introduce the U.S. Army Environmental Command (USAEC) per-and polyfluoroalkyl substances program with Radford Army Ammunition Plant (RFAAP), Army Material Command (AMC), and the U.S. Army Corps of Engineers (USACE).	20 May 2019	L. Henderson
Kickoff teleconference meeting minutes *(1 week after teleconference)*	Deliverable was reviewed by Arcadis Regional Lead and Technical Editor prior to distribution to RFAAP, AMC, the USACE, and the USAEC.	28 May 2019	L. Henderson
Pre-site visit records search *(6 weeks prior to site visit)*	Arcadis initiated the RFAAP records search in June 2019.	15 June 2019	L. Henderson
Read-ahead package *(2 weeks prior to site visit)*	Deliverable was reviewed by Arcadis Regional Lead and Technical Editor prior to distribution to RFAAP, the USACE, and the USAEC.	17 June 2019	L. Henderson
Site Visit			
Notification	Arcadis regional lead finalized site visit logistics and requested contact information for interviewees with submission of read-ahead package.	17 June 2019	C. Ingersoll
In-briefing	Arcadis hosted an in-briefing for several personnel, including RFAAP Directorate of Public Works, fire department, and production engineering personnel, and USACE and USAEC representatives.	06 August 2019	C. Ingersoll
Site visit records search	Arcadis collected various documents and records during the site visit.	6-7 August 2019	L. Henderson, C. Ingersoll
Site visit personnel interviews	Arcadis interviewed several personnel (RFAAP maintenance and utilities, active fire department personnel) during the site visit, completing interview logs for each interviewee (or group of interviewees).	6-7 August 2019	L. Henderson, C. Ingersoll
Site reconnaissance trips	Arcadis conducted site reconnaissance at several areas during the site visit, completing site reconnaissance logs for each area (or group of areas) visited. USAEC ESM accompanied Arcadis during the site recon.	6-7 August 2019	L. Henderson, C. Ingersoll
Exit briefing	Arcadis hosted an informal exit briefing with RFAAP DPW personnel and USAEC representatives.	8 August 2019	L. Henderson, C. Ingersoll
Scheduled area of potential interest (AOPI) teleconference	During the site visit, Arcadis scheduled or obtained possible dates for the AOPI teleconference from necessary U.S. Army and Reserve installation points of contact.	24 September 2019	C. Ingersoll

Appendix B
Installation Preliminary Assessment / Site Inspection Quality
Per- and Polyfluoroalkyl Substances Preliminary Assessment/Site Inspection
Radford Army Ammunition Plant, Virginia

Action Item *(Target Date)*	Comments	Completed Date	Completed By
Post-Site Visit			
Data compilation, verification, and review	Arcadis evaluated additional information and data collected during the site visit to determine AOPI designations.	30 August 2019	L. Henderson
Site Visit Trip Report	Deliverable was reviewed by Arcadis Regional Lead and Technical Editor prior to distribution to RFAAP, the USACE, and the USAEC.	16 September 2019	L. Henderson
Post-site visit teleconference	Arcadis hosted a discussion of proposed AOPIs with RFAAP, the USACE, and USAEC staff, and the list of AOPIs was finalized.	5-Nov-19	L. Henderson
Site Inspection			
Site inspection (SI) kickoff teleconference	Arcadis hosted a kickoff meeting with RFAAP and the USACE to discuss sampling options for the site inspection.	4 February 2020	L. Henderson, C. Ingersoll, J. Artrip
SI kickoff teleconference meeting minutes	Deliverable was reviewed by Arcadis Regional Lead and Technical Editor prior to distribution to RFAAP, the USACE, and the USAEC.	20 February 2020	C. Ingersoll
SI scoping teleconference	Arcadis hosted a meeting with RFAAP, USAEC, and USACE to discuss the sampling scope and schedule for the site inspection.	2 January 2020	J. Artrip
SI scoping teleconference meeting minutes	Deliverable was reviewed by Arcadis Regional Lead and Technical Editor prior to distribution to RFAAP, the USACE, and the USAEC.	20 February 2020	C. Ingersoll
Draft Quality Assurance Project Plan (QAPP) Addendum and Site Safety and Health Plan (SSHP)	Arcadis provided a draft proposed scope of work based on the determination of AOPIs discussed during the post-site-visit teleconference and the SI kickoff meeting. Deliverable was reviewed by the Arcadis Regional Lead, Technical Lead, Quality Control Reviewer, and Technical Editor prior to distribution to RFAAP, the USACE, and the USAEC.	10 July 2020	J. Artrip
Submittal of responses to comments	All comments on the Draft QAPP Addendum were received by 05 June 2020. The response to comment matrix detailing the completed revisions was submitted to RFAAP, the USACE and the USAEC.	10 July 2020	J. Artrip
Draft Final QAPP Addendum	Arcadis provided the draft final proposed scope of work agreed upon by the installation, USACE, and USAEC for the installation to provide to regulators.	10 July 2020	J. Artrip
Submittal of responses to comments	--	--	--
Final QAPP Addendum and SSHP	Arcadis revised the draft document per comments from RFAAP, the USACE, and the USAEC prior to finalizing the document. Additional OPSEC review delayed finalization of this report.	04 September 2020	J. Artrip
Site inspection planning	Arcadis regional lead finalized site inspection logistics and completed all access requirements, scheduling, and/or permits necessary.	05 December 2020	K. Toth
Site inspection field work *(timing dependent on availability of subcontractors)*	Arcadis completed the scope of work outlined in the QAPP Addendum with drilling subcontractors [EnviroCheck].	19 April 2021	K. Toth
Preliminary Assessment/Site Inspection Report			

Appendix B

Action Item *(Target Date)*	Comments	Completed Date	Completed By
Draft PA/SI Report	Deliverable was reviewed by Arcadis Regional Lead, Quality Control Reviewer, and Technical Editor prior to distribution to RFAAP, the USACE, and the USAEC.	18 July 2022	J. Artrip, K. Toth
Submittal of responses to comments	--	--	--
Draft Final PA/SI Report	Deliverable was reviewed by Arcadis Regional Lead, Quality Control Reviewer, and Technical Editor prior to distribution to USAEC Legal and HQDA.	26 July 2022	J. Artrip, K. Toth
Submittal of responses to comments	--	--	--
Final PA/SI Report	Revised deliverable was reviewed by Arcadis Regional Lead, Quality Control Reviewer, and Technical Editor prior to distribution to RFAAP, the USACE, and the USAEC.	22 September 2022	J. Artrip, K. Toth
Preliminary assessment/site inspection complete at RFAAP - Quality Control Reviewer		**Jessica Travis, Seres E&S**	

APPENDIX C

Antiterrorism/Operations Security Review Cover Sheet

U.S. Army Corps of Engineers

CONTRACT REQUIREMENTS PACKAGE

ANTITERRORISM/OPERATIONS SECURITY REVIEW COVER SHEET

For use of this form, see AR 525-13, ALARACT 015/2012; and USACE OPORD 2013-74; the proponent agency is CECO-P.

SECTION I - CONTRACT INFORMATION

1. CONTRACT TITLE	2. LOCATION
US Army Environmental Command Preliminary Assessments (PAs) of Perfluorooctane Sulfonate (PFOS)	Nationwide
3. SOLICITATION/CONTRACT NO.	4. CLASS APPROVAL REQUEST NUMBER
W912DR-13-D-0019	

5. CONTRACT TYPE

☐ Construction ☐ IDIQ ☒ MATOC ☐ SATOC ☐ Service ☐ Supply ☐ Task Order

☐ Other (*specify*)

SECTION II - PURPOSE

Part A. Purpose of cover sheet is to document the review of the requirements package performance work statement (PWS)/statement of work (SOW)/ statement of requirements (SOR) for antiterrorism (AT) and other related protection matters to include, but not limited to: operation security (OPSEC), information assurance (IA), physical security, law enforcement, intelligence and foreign disclosure. **Army policy requirement:** A Signed AT/OPSEC cover sheet is required to be included in all requirements packages except for supply contracts under the simplified acquisition level threshold ($150K), field ordering officer actions and Government purchase card purchases. Local policy may require this form for supply contracts under the simplified acquisition level threshold based on risk and threat. **Mandatory review and signatures**: The organizational Antiterrorism Officer (ATO) and OPSEC Officer must review each requirements package, unless a signed class approval request form is completed, prior to submission to the supporting contracting activity to include coordination with other staff review as appropriate. If the requiring activity (RA) does not have an ATO or OPSEC Officer, the first ATO and OPSEC Officer in the chain of command will review the contract for AT/OPSEC considerations.

SECTION III - STANDARD CONTRACT LANGUAGE

Part B. Standard Contract Language and/or Additional PWS/SOW/SOR Language. The applicability of each requirement must be considered and each block must be checked "Yes" or "N/A". If the standard PWS/SOW/SOR language text found in Section VIII. of this form is sufficient to meet specific contract request requirements, check "Yes" in block below and include this language in the PWS/SOW/SOR. If the standard PWS/SOW/SOR language applies, but is not in of itself sufficient, check "Yes" and include both the standard language and additional contract specific language in the PWS/SOW/SOR. If standard PWS/SOW/SOR language text does not apply, check "N/A".

SECTION IV - REQUIRED CLAUSES

Required Clause(s) (*see Section VIII for sample language*)	YES	N/A
1. AT Level I training *(general).*	☒	☐
2. Access and General Protection/Security Policy and Procedures.	☒	☐
2a. Contractors requiring Common Access Card (CAC).	☒	☐
2b. Contractors who do not require CAC, but require access to a Department of Defense (DoD) facility or installation.	☒	☐
3. AT Awareness training for contractor personnel traveling overseas.	☒	☐
4. iWATCH and/or CorpsWatch training.	☒	☐
5. Access to government information systems.	☐	☒
6. OPSEC SOP/Plan requirements.	☒	☐
7. Requirement for OPSEC training.	☒	☐
8. Information assurance/information technology training.	☐	☒
9. Information assurance/information technology training certification.	☐	☒
10. Contractors Authorized to Accompany the Force (OCONUS).	☐	☒
11. Contract requires performance or delivery in a foreign country (OCONUS).	☐	☒
12. Handling/Access to Classified Information.	☐	☒
13. Will be escorted in areas where they may be exposed to classified and/or sensitive materials.	☐	☒
14. Contractor Company to obtain a Facility Clearance and individual clearances at the appropriate level.	☐	☒

15. Pre-screen candidates using E-Verify Program.	☐	☒
16. For contracts requiring armed security guards.	☐	☒
17. Threat Awareness Reporting Program (TARP) training.	☐	☒

SECTION VI - ANTITERRORISM REVIEWER'S SIGNATURE

I am ATO Level II certified and I have reviewed the requirements package and understand my responsibilities IAW Army Regulation 525-13, Antiterrorism.

1. TYPED OR PRINTED NAME	2. RANK/CIVILIAN GRADE	3. PHONE NUMBER
Pratya Siriwat	GS14	210-466-1656
4. SIGNATURE	5. DATE	
SIRIWAT.PRATYA.1159129710 Digitally signed by SIRIWAT.PRATYA.1159129710 Date: 2018.07.27 16:19:09 -05'00'	2018-07-27	

SECTION VII - OPERATIONS SECURITY REVIEWER'S SIGNATURE

I am OPSEC Level II certified and have reviewed the requirements package to ensure that there are no OPSEC concerns regarding the release and/or publication of attached documentation to public forums as well as to determine OPSEC requirements for the Contractor, and understand my responsibilities IAW Army Regulation 530-1, Operations Security.

1. TYPED OR PRINTED NAME	2. RANK/CIVILIAN GRADE	3. PHONE NUMBER
Pratya Siriwat	GS14	210-466-1656
4. SIGNATURE	5. DATE	
SIRIWAT.PRATYA.1159129710 Digitally signed by SIRIWAT.PRATYA.1159129710 Date: 2018.07.27 16:19:45 -05'00'	2018-07-27	

SECTION VIII - STANDARD CONTRACT PROVISION AND CLAUSE TEXT APPLICABILITY AND/OR ADDITIONAL PWS/SOW/SOR LANGUAGE

(*To access a Word version of page 3 and 4 for this form please click on the attachment icon on the left of the form*)

1. **AT Level I Training.** This provision/contract text is for contractor employees with an area of performance within an Army controlled installation, facility or area. **Proposed language:** "All contractor employees, to include subcontractor employees, requiring access to Army installations, facilities, controlled access areas, or require network access, shall complete AT Level I awareness training within 30 calendar days after contract start date or effective date of incorporation of this requirement into the contract, whichever is applicable. Upon request, the contractor shall submit certificates of completion for each affected contractor employee and subcontractor employee, to the COR or to the contracting officer (if a COR is not assigned), within 5 calendar days after completion of training by all employees and subcontractor personnel. AT Level I awareness training is available at the following website: http://jko.jten.mil/courses/atl1/launch.html; or it can be provided by the RA ATO in presentation form which will be documented via memorandum."

2. **Access and General Protection/Security Policy and Procedures**. This standard language text is for contractor employees with an area of performance within an Army controlled installation, facility or area. **Proposed language**: "All contractor and all associated sub-contractors employees shall comply with applicable installation, facility and area commander installation/facility access and local security policies and procedures (provided by government representative). The contractor shall also provide all information required for background checks to meet installation/facility access requirements to be accomplished by installation Provost Marshal Office, Director of Emergency Services or Security Office. Contractor workforce must comply with all personal identity verification requirements (FAR clause 52.204-9, Personal Identity Verification of Contractor Personnel) as directed by DOD, HQDA and/or local policy. In addition to the changes otherwise authorized by the changes clause of this contract, should the Force Protection Condition (FPCON) at any installation or facility change, the Government may require changes in contractor security matters or processes."

2a. **For contractors requiring Common Access Card (CAC).** Before CAC issuance, the contractor employee requires, at a minimum, a favorably adjudicated National Agency Check with Inquiries (NACI) or an equivalent or higher investigation in accordance with Army Directive 2014-05 and Homeland Security Presidential Directive-12 (HSPD-12). **Proposed language:** "The contractor and all sub-contractors employees will be issued a CAC only if duties involve one of the following: (1) Both physical access to a DoD facility and access, via logon, to DoD networks on-site or remotely; (2) Remote access, via logon, to a DoD network using DoD-approved remote access procedures; or (3) Physical access to multiple DoD facilities or multiple non-DoD federally controlled facilities on behalf of the DoD on a recurring basis for a period of 6 months or more. At the discretion of the sponsoring activity, an interim CAC may be issued based on a favorable review of the FBI fingerprint check and a successfully scheduled NACI at the Office of Personnel Management."

2b. **For contractors who do not require CAC, but require access to a DoD facility or installation**. **Proposed language**: Contractor and all associated sub-contractors employees shall comply with adjudication standards and procedures using the National Crime Information Center Interstate Identification Index (NCIC-III) and Terrorist Screening Database (TSDB) (Army Directive 2014-05 / AR 190-13), applicable installation, facility and area commander installation/facility access and local security policies and procedures (provided by government representative, as NCIC and TSDB are available), or, at OCONUS locations, in accordance with status of forces agreements and other theater regulations.

3. **AT Awareness Training for Contractor Personnel Traveling Overseas**. This standard language text required US based contractor employees and associated sub-contractor employees to make available and to receive government provided area of responsibility (AOR) specific AT awareness training as directed by AR 525-13 (Antiterrorism). Specific AOR training content is directed by the combatant commander with the unit ATO being the local point of contact. **Proposed language**: "All US based contractor employees and associated sub-contractor employees traveling overseas will receive the government provided AOR specific AT awareness training. The documentation of training completion must be provided to the COR prior to departure."

4. **Suspicious Activity Reporting Training (e.g.** iWATCH, CorpsWatch, or See Something, Say Something**).** This standard language is for contractor employees with an area of performance within an Army controlled installation, facility or area. **Proposed language:** "The contractor and all associated sub-contractors shall receive a brief/training (provided by the RA) on the local suspicious activity reporting program. This locally developed training will be used to inform employees of the types of behavior to watch for and instruct employees to report suspicious activity to the project manager, security representative or law enforcement entity. This training shall be completed within 30 calendar days of contract award and within 30 calendar days of new employees commencing performance with the results reported to the COR NLT 5 calendar days after the completion of the training."

5. **Contractor Employees Who Require Access to Government Information Systems.** This standard language text is for contractor employees with access to government info system. **Proposed language:** "All contractor employees with access to a government info system must be registered in the Army Training Certification Tracking System (ATCTS) at commencement of services, and must successfully complete the DOD Information Assurance Awareness prior to access to the information systems and then annually thereafter in accordance with personnel security standards listed in AR 25-2 (Information Assurance), an appropriate background investigation will be conducted prior to accessing the government information systems."

6. **For Contracts that Require an OPSEC Standing Operating Procedure/Plan.** This standard language text is for contractor employees with an area of performance for classified contracts or if the contract employee has access or responsibility to protect critical information. The Contractor, in collaboration with RA OPSEC Officer, shall develop an OPSEC Standard Operating Procedure (SOP)/Plan within 90 calendar days of contract award per AR 530-1 (Operations Security). **Proposed language:** "The Contractor shall develop an OPSEC SOP/Plan within 90 days of contract award. The OPSEC SOP/Plan must be reviewed and approved by the RA OPSEC Officer. The SOP/Plan will include the government's critical information, why it needs to be protected, where it is located, who is responsible for it and how to protect it. In addition, the contractor shall identify an individual who will be an OPSEC Coordinator."

7. **For Contracts that Require OPSEC Training.** Per AR 530-1, (Operations Security) contractor employees must complete Level I OPSEC Training within 30 calendar days of contract award. **Proposed language**: "All new contractor employees will complete Level I OPSEC Training within 30 calendar days of their reporting for duty. Additionally, all contractor employees must complete annual OPSEC awareness training. The contractor shall submit certificates of completion for each affected contractor and subcontractor employee, to the COR or to the contracting officer (if a COR is not assigned), within 5 calendar days after completion of training. OPSEC awareness training is available at the following websites: https://www.iad.gov/ioss/ or http://www.cdse.edu/catalog/operations-security.html; or it can be provided by the RA OPSEC Officer in presentation form which will be documented via memorandum."

8. **For Information assurance (IA)/information technology (IT) training.** This standard language text is for contract employees who need network access and/or working IA/IT functions. **Proposed language**: "All contractor employees and associated sub-contractor employees must complete the DoD IA awareness training before issuance of network access and annually thereafter. All contractor employees working IA/IT functions must comply with DoD and Army training requirements in DoDD 8570.01, DoD 8570.01-M and AR 25-2 within six months of employment."

9. **For information assurance (IA)/information technology (IT) certification.** Per DoD 8570.01-M , DFARS 252.239.7001 and AR 25-2, the contractor employees supporting IA/IT functions shall be appropriately certified upon contract award. The baseline certification as stipulated in DoD 8570.01-M must be completed upon contract award. **Proposed language:** "All contractor employees supporting IA/IT functions shall be appropriately certified upon contract IAW DoD 8570.01-M, DFARS 252.239-7001 and AR 25-2. The baseline certification as stipulated in DoD 8570.01-M must be completed upon contract award."

10. **For Contractors Authorized to Accompany the Force.** DFARS Clause 252.225-7040, Contractor Personnel Authorized to Accompany U.S. Armed Forces Deployed Outside the United States. The clause shall be used in solicitations and contracts that authorize contractor personnel to accompany US Armed Forces deployed outside the US in contingency operations; humanitarian or peacekeeping operations; or other military operations or exercises, when designated by the combatant commander. **Proposed language**: "All contractor employees shall ensure the following AT/OPSEC requirements are met prior to deploying personnel authorized to accompany U.S. Armed Forces outside the United States; to include compliance with laws, regulations, pre-deployment requirements, and required training in accordance with combatant command guidance."

11. **For Contracts Requiring Performance or Delivery in a Foreign Country.** DFARS Clause 252.225-7043, Antiterrorism/Force Protection for Defense Contractors Outside the US. The clause shall be used in solicitations and contracts that require performance or delivery in a foreign country. This clause applies to both contingencies and non-contingency support. **Proposed language:** "All non-local contracting personnel will comply with theater clearance requirements and allows the combatant commander to exercise oversight to ensure the contractor's compliance with combatant commander and subordinate task force commander policies and directives."

12. **For Contracts That Require Handling or Access to Classified Information.** This clause involves access to classified information, i.e. “Confidential,” “Secret,” or “Top Secret”. **Proposed language**: "Contractor shall comply with AR 380-67 (Personnel Security Program) and Homeland Security Presidential Directive 12 (Policy for a Common Identification Standard for Federal Employees and Contractors) as well as FAR 52.204-2, Security Requirements. Additionally, Contractors must comply with - (1) The Security Agreement (DD Form 441), including the National Industrial Security Program Operating Manual (DoD 5220.22-M); any revisions to DOD 5220.22-M, notice of which has been furnished to the contractor. For classified contracts, the DD Form 254 will be attached with the contract."

13. **Will be escorted in areas where they may be exposed to classified and/or sensitive materials and/or sensitive or restricted areas.** The contractor will coordinate with the COR and/or the facility security office for access when required. (Use when security clearances are not required, i.e. facility repair or construction). **Proposed language**: "All contract employees, including subcontractor employees who are not in possession of the appropriate security clearance or access privileges, will be escorted in areas where they may be exposed to classified and/or sensitive materials and/or sensitive or restricted areas."

14. (FOR CLASSIFIED CONTRACTS ONLY) **Contractor Company to obtain a Facility Clearance and individual clearances at the appropriate level. Proposed language:** "The Prime Contractor Company must have a Facility Clearance (FCL) at the appropriate level (IAW the NISPOM DOD 5220.22-M and AR 380-49) prior to the start of the contract awarded period of performance. Contractor personnel performing work under this contract must have the required security clearance, per AR 380-67, at the appropriate level at the start of the period of performance. Security Clearances and FCL requirements are required to be maintained for the life of the contract IAW the DD Form 254 attached to the contract. If no FCL, the supporting Government Contracting Activity will sponsor the prime contract company in obtaining the FCL."

15. **Pre-screen candidates using E-Verify Program. Proposed language:** "The Contractor must pre-screen Candidates using the E-verify Program (http://www.uscis.gov/e-verify) website to meet the established employment eligibility requirements. The Vendor must ensure that the Candidate has two valid forms of Government issued identification prior to enrollment to ensure the correct information is entered into the E-verify system. An initial list of verified/eligible Candidates must be provided to the COR no later than 3 business days after the initial contract award." *When contracts are with individuals, the individuals will be required to complete a Form I-9, Employment Eligibility Verification, with the designated Government representative. This Form will be provided to the Contracting Officer and shall become part of the official contract file.

16. **For contract requiring armed security guards.** This standard language text is for contractor employees with an area of performance within an Army controlled installation, facility or area. The Physical Security Officer must or will review the PWS/SOW with the Contracting Officer (KO) for accuracy and completeness of AR 190-11 requirements. **Proposed language:** "All contractor and all associated sub-contractors employees shall comply with applicable installation, facility and area commander installation/facility policies and procedures on storing weapons and ammunition IAW AR 190-11 (provided by government representative)."

17. **Threat Awareness Reporting Program**. For all contractors with security clearances. Per AR 381-12 Threat Awareness and Reporting Program (TARP), contractor employees must receive annual TARP training by a CI agent or other trainer as specified in 2-4b. **Proposed language**: "All new contractor employees will complete annual Threat Awareness and Reporting Program (TARP) Training provided by a Counterintelligence Agent, IAW AR 381-12 . The contractor shall submit certificates of completion for each affected contractor and subcontractor employee(s) or a memorandum for the record, to the COR or to the contracting officer (if a COR is not assigned), within 5 calendar days after completion of training. Authorized web-based TARP training for CAC card holders is available at the following website: https://www.us.army.mil/suite/page/655474

Email Form | Print Form

CONTRACT REQUIREMENTS PACKAGE ANTITERRORISM/OPERATIONS SECURITY REVIEW COVER SHEET

REQUIREMENTS PACKAGE TITLE: USAEC Preliminary Assessments (PA) of Per and Polyf DATE: 30 Sept 2017

SECTION I.

Purpose of cover sheet: To document the review of the requirements package statement of work (SOW), quality assurance surveillance plan (QASP), and any applicable source selection evaluation criteria for antiterrorism (AT) and other related protection matters, to include, but not limited to: AT, operations security (OPSEC), information assurance (IA)/cyber security, physical security, law enforcement, intelligence, or foreign disclosure.

Army policy requirement: A signed AT/OPSEC cover sheet is required to be included in all requirements package except for supply contracts under the simplified acquisition level threshold ($150,000.00), field ordering officer actions and Government purchase card purchases. Command policy may require this form for supply contracts under the simplified acquisition level threshold.

Mandatory review and signatures: The organizational Antiterrorism Officer (ATO), Information Security Manager, Operations Security Officer, Information Assurance Manager, Security Manager and Contracting Officer Representative must review and sign each requirements package prior to submission to the supporting contracting activity, to include coordination with other staff review as appropriate per section II below. If the requiring activity does not have an ATO, Security Manager, OPSEC Officer, IA Officer, and COR, the first functional in the chain of command will review the contract for each functional consideration.

SECTION II. Standard Contract Language Provision/Contract Clause Text Applicability and/or Additional SOW Language. If standard contract or clause language found on page 2 (section IV) of this form is sufficient to meet specific contract request requirements, check "yes" in block below and include this language in the SOW. If standard contractual text (provisions or clauses) or clause language does not apply, check "no." If the standard SOW language applies, but is not in and of itself sufficient, check "yes" and "SOW" and include both the standard language and additional contract specific language in the SOW. If yes is marked for items 1, 3, 5, 7, 8, or 15, training is required. Mandatory training must be measured as a deliverable and evaluated in the QASP.

Section III. Remarks:

Contract # W912DR-13-D-0019 T.O. W912DR17F036. Task Order issued by Baltimore Corps of Engineers for 82 Army installations including 18 AMC installations.

Section IV. Standard Contract Language/Contract Clause Applicability and/or Additional SOW Language

1. AT Level I training. This standard language is for contractor employees with an area of performance within an Army controlled installation, facility or area. All contractor employees, to include subcontractor employees, requiring access to Army installations, facilities and controlled access areas shall complete AT Level I awareness training within 30 calendar days after contract start date or effective date of incorporation of this requirement into the contract, whichever is applicable. The contractor shall submit certificates of completion for each affected contractor employee and subcontractor employee to the COR or to the contracting officer, if a COR is not assigned, within 30 calendar days after completion of training by all employees and subcontractor personnel. AT level I awareness training is available at the following website: http://jko.jten.mil.

2. AT Awareness Training for Contractor Personnel Traveling Overseas. This standard language requires US based contractor employees and associated subcontractor employees to make available and to receive government provided area or responsibility (AOR) specific AT awareness training as directed by AR 525-13. Specific AOR training content is directed by the combatant commander with the unit ATO being the local point of contact.

3. iWATCH Training. This standard language is for contractor employees with an area of performance within an Army controlled installation, facility or area. The contractor and all associated subcontractors shall brief all employees on the local iWATCH program (training standards provided by the requiring activity ATO). This local developed training will be used to inform employees of the types of behavior to watch for and instruct employees to report suspicious activity to the CO. This training shall be completed within 30 calendar days of contract award and within 30 calendar days of new employees commencing performance with the results reported to the COR NLT 30 calendar days after contract award.

4. Army Training Certification Tracking System (ATCTS) registration for contractor employees who require access to government information systems. All contractor employees with access to a government information system must be registered in the ATCTS (Army Training Certification Tracking System) at commencement of services, and must successfully complete the DoD Information Assurance Awareness prior to access to the IS and then annually thereafter.

5 For contracts that require a formal OPSEC program. The contractor shall develop an OPSEC Standing Operating Procedure (SOP)/Plan with 90 calendar days of contract award, to be reviewed and approved by the responsible government OPSEC officer. This plan will include a process to identify critical information, where it is located, who is responsible for it, how to protect it and why it needs to be protected. The contractor shall implement OPSEC measures as ordered by the commander. In addition, the contractor shall have an identified certified Level II OPSEC coordinator per AR 530-1.

6. For contracts that require OPSEC training. Per AR 530-1, the contractor employees must complete Level I OPSEC Awareness training. New employees must be trained with 30 calendar days of their reporting for duty and annually thereafter.

7. For information assurance (IA)/information technology (IT) training. All contractor employees and associated subcontractor employees must complete the DoD IA awareness training before issuance of network access and annually thereafter. All contractor employees working IA/IT functions must comply with DoD and Army training requirements in DoDD 8570.01, DoD 8570.01-M and AR 25-2 which must be completed upon contract awards.

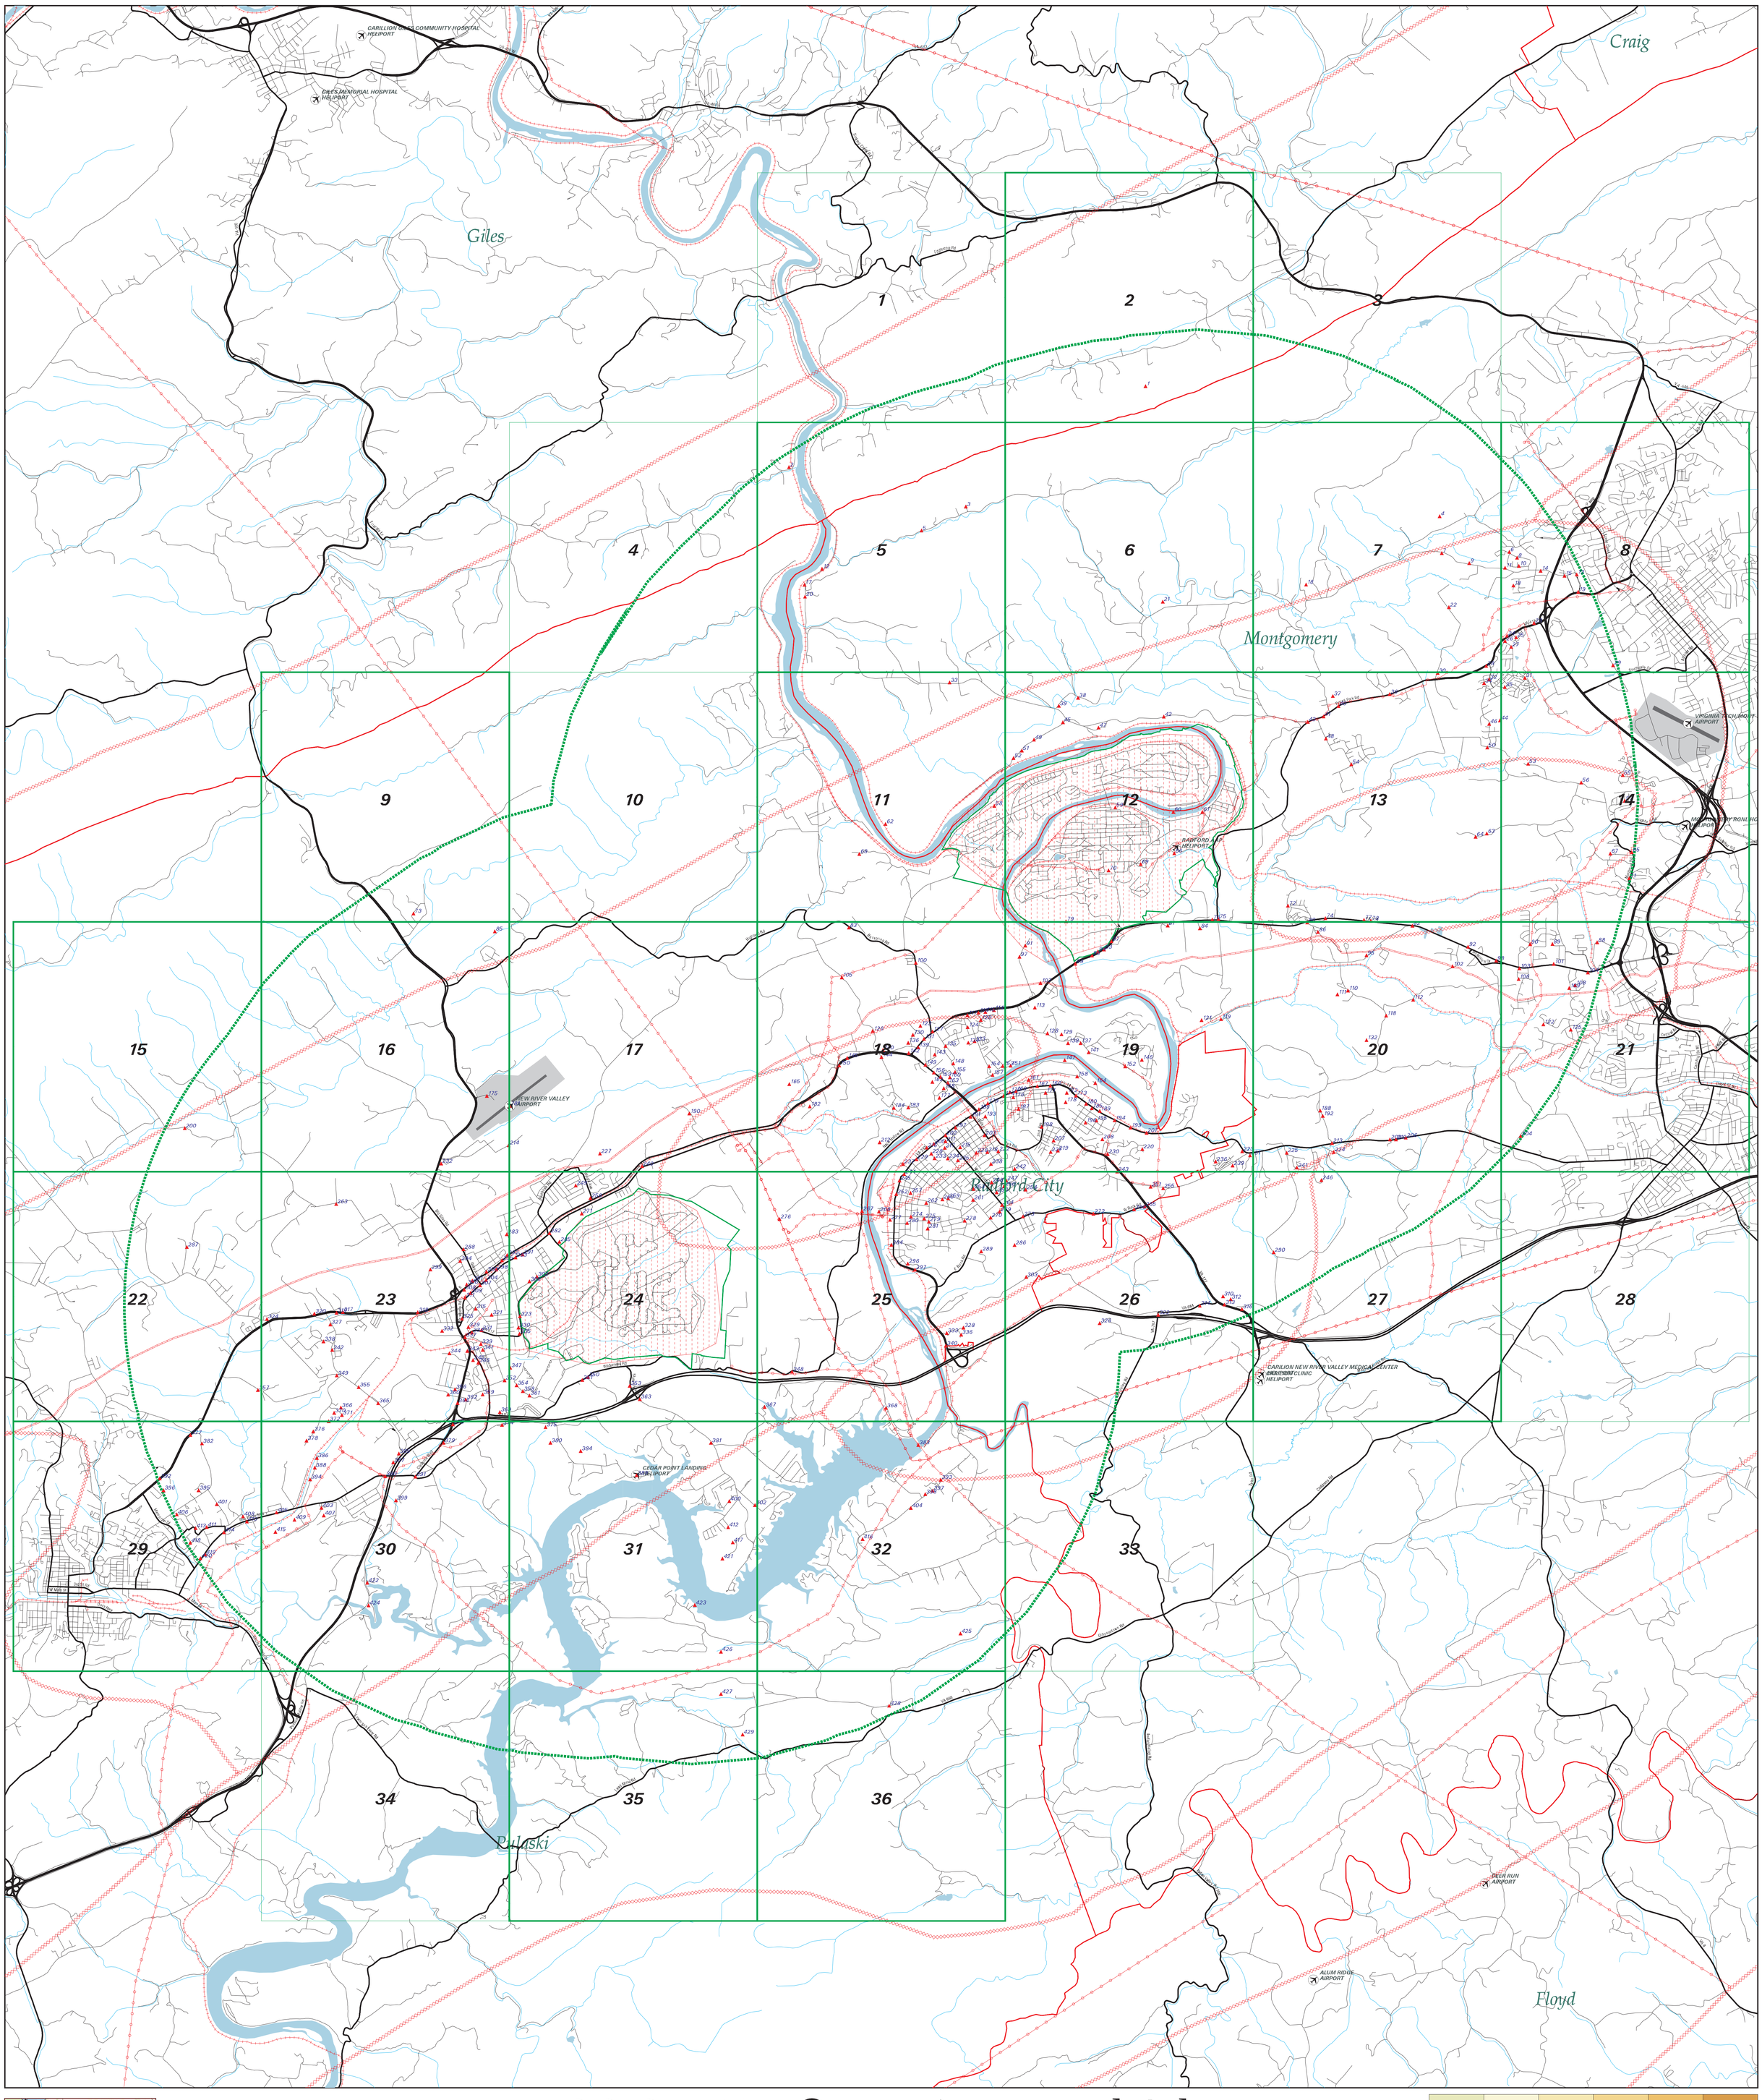
8. For information assurance (IA)/information technology (IT) certification. Per DoD 8570.01-M, DFARS 252.239.7001 and AR 25-2, the contractor employees supporting IA/IT functions shall be appropriately certified upon contract award. The baseline certification as stipulated in DoD 8570.01-M must be completed upon contract award.

9. For contractors authorized to accompany the force. DFARS Clause 252.225-7040, Contractor Personnel Authorized to Accompany U.S. Armed Forces Deployed Outside the United States. The clause shall be used in solicitations and contracts that authorize contractor personnel to accompany US Armed Forces deployed outside the US in contingency operations; humanitarian or peacekeeping operations; or other military operations or exercises, when designated by the combatant commander. The clause discusses the following AT/OPSEC related topics: required compliance with laws and regulations, pre-deployment requirements, required training (per combatant command guidance), and personnel data required.

10. For Contract Requiring Performance of Delivery in a Foreign Country. DFARS Clause 252.225-7043, Antiterrorism/Force Protection for Defense Contractors Outside the US. The clause shall be used in solicitations and contracts that require performance or delivery in a foreign country. This clause applies to both contingencies and non-contingency support. The key AT requirement is for non-local national contractor personnel to comply with theater clearance requirements and allows the combatant commander to exercise oversight to ensure the contractor's compliance with combatant commander and subordinate task force commander policies and directives.

11. For contracts that require handling or access to classified information. Contractor shall comply with FAR 52.204-2, Security Requirements. This clause involves access to information classified "Confidential," "Secret," or "Top Secret" and requires contractors to comply with: (1) The Security Agreement (DD Form 441), including the National Industrial Security Program Operating Manual (DoD 5220.22-M) and, (2) any revisions to DoD 5220.22-M, notice of which has been furnished to the contractor.

12. Access and general protection/security policy and procedures. This standard language is for contractor employees with an area of performance within an Army controlled installation, facility, or area. Contractor and all associated subcontractors employees shall provide all information required for background checks to meet installation access requirements to be accomplished by installation Provost Marshal Office, Director of Emergency Services or Security Office. Contractor workforce must comply with all personal identity verification requirements (FAR clause 52.204-9, Personal Identity Verification of Contractor Personnel) as directed by DoD, HQDA and/or local policy. In addition to the changes otherwise authorized by the changes clause of this contract, should the Force Protection Condition (FPCON) at any individual facility or installation change, the Government may require changes in contractor security matters or processes.



13. For contractors requiring a Common Access Card (CAC). Before CAC issuance, the contractor employee requires, at a minimum, a favorably adjudicated national Agency Check with Inquiries (NACI) or an equipment or higher investigation in accordance with Army Directive 2014-05. The contractor employee will be issued a CAC only if duties involve one of the following: (1) both physical access to a DoD facility and access, via logon, to DoD networks on-site or remotely; (2) remote access, via logon, do a DoD network using DoD-approved remote access procedures; or, (3) physical access to multiple DoD facilities or multiple non-DoD federally controlled facilities on behalf of the DoD on a recurring basis for a period of 6 months or more. At the discretion of the sponsoring activity, an initial CAC may be issued based on a favorable review of the FBI fingerprint check and a successfully scheduled NACI at the Office of Personnel Management.

14. For contractors that do not require a CAC, but require access to a DoD facility or installation. Contractor and all associated subcontractor employees shall comply with adjudication standards and processes using the National Crime Information Center Interstate Identification Index (NCIC-III) and Terrorist Screening Database (TSDB) (Army Directive 2014-05/AR 190-13), applicable installation, facility and area commander installation/ facility access and local security policies and procedures (provided by government representative), or, at OCONUS locations, in accordance with status of forces agreements and other theater regulations.

15. Threat Awareness Reporting Program. For all contractors with security clearances. Per AR 381-12, Threat Awareness and Reporting Program (TARP), contractor employees must receive annual TARP training by a CI agent or other trainer as specified in 2-4b.

SURROUNDING SITES: SEARCH RESULTS

Surrounding sites were identified.

The Map ID column refers to the Map ID-Focus Map(s) of the listed site.

Sites listed in ***bold italics*** are in multiple databases.

Unmappable (orphan) sites are not considered in the foregoing analysis.

FEDERAL RECORDS

SEMS: SEMS (Superfund Enterprise Management System) tracks hazardous waste sites, potentially hazardous waste sites, and remedial activities performed in support of EPA's Superfund Program across the United States. The list was formerly know as CERCLIS, renamed to SEMS by the EPA in 2015. The list contains data on potentially hazardous waste sites that have been reported to the USEPA by states, municipalities, private companies and private persons, pursuant to Section 103 of the Comprehensive Environmental Response, Compensation, and Liability Act (CERCLA). This dataset also contains sites which are either proposed to or on the National Priorities List (NPL) and the sites which are in the screening and assessment phase for possible inclusion on the NPL.

A review of the SEMS list, as provided by EDR, and dated 04/11/2019 has revealed that there are 2 SEMS sites within the searched area.

Site	Address	Map ID

DUBLIN GROUNDWATER S Site ID: 0306901 EPA Id: VAN000306901	RT. 11 AND CEMETARY	293-23,24

SEMS-ARCHIVE: SEMS-ARCHIVE (Superfund Enterprise Management System Archive) tracks sites that have no further interest under the Federal Superfund Program based on available information. The list was formerly known as the CERCLIS-NFRAP, renamed to SEMS ARCHIVE by the EPA in 2015. EPA may perform a minimal level of assessment work at a site while it is archived if site conditions change and/or new information becomes available. Archived sites have been removed and archived from the inventory of SEMS sites. Archived status

indicates that, to the best of EPA's knowledge, assessment at a site has been completed and that EPA has determined no further steps will be taken to list the site on the National Priorities List (NPL), unless information indicates this decision was not appropriate or other considerations require a recommendation for listing at a later time. The decision does not necessarily mean that there is no hazard associated with a given site; it only means that. based upon available information, the location is not judged to be potential NPL site.

A review of the SEMS-ARCHIVE list, as provided by EDR, and dated 04/11/2019 has revealed that there are 4 SEMS-ARCHIVE sites within the searched area.

RCRA-TSDF: RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Transporters are individuals or entities that move hazardous waste from the generator offsite to a facility that can recycle, treat, store, or dispose of the waste. TSDFs treat, store, or dispose of the waste.

A review of the RCRA-TSDF list, as provided by EDR, and dated 03/25/2019 has revealed that there are 4 RCRA-TSDF sites within the searched area.

RCRA-LQG: RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Large quantity generators (LQGs) generate over 1,000 kilograms (kg) of hazardous waste, or over 1 kg of acutely hazardous waste per month.

A review of the RCRA-LQG list, as provided by EDR, and dated 03/25/2019 has revealed that there are 6 RCRA-LQG sites within the searched area.

RCRA-SQG: RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Small quantity generators (SQGs) generate between 100 kg and 1,000 kg of hazardous waste per month.

A review of the RCRA-SQG list, as provided by EDR, and dated 03/25/2019 has revealed that there are 14 RCRA-SQG sites within the searched area.

RCRA-CESQG: RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Conditionally exempt small quantity generators (CESQGs) generate less than 100 kg of hazardous waste, or less than 1 kg of acutely hazardous waste per month.

A review of the RCRA-CESQG list, as provided by EDR, and dated 03/25/2019 has revealed that there are 41 RCRA-CESQG sites within the searched area.

RCRA NonGen / NLR: RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Non-Generators do not presently generate hazardous waste.

A review of the RCRA NonGen / NLR list, as provided by EDR, and dated 03/25/2019 has revealed that there are 18 RCRA NonGen / NLR sites within the searched area.

EXECUTIVE SUMMARY

US CDL: A listing of clandestine drug lab locations. The U.S. Department of Justice ("the Department") provides this web site as a public service. It contains addresses of some locations where law enforcement agencies reported they found chemicals or other items that indicated the presence of either clandestine drug laboratories or dumpsites. In most cases, the source of the entries is not the Department, and the Department has not verified the entry and does not guarantee its accuracy. Members of the public must verify the accuracy of all entries by, for example, contacting local law enforcement and local health departments.

A review of the US CDL list, as provided by EDR, and dated 02/24/2019 has revealed that there are 19 US CDL sites within the searched area.

HIST FTTS: A complete administrative case listing from the FIFRA/TSCA Tracking System (FTTS) for all ten EPA regions. The information was obtained from the National Compliance Database (NCDB). NCDB supports the implementation of FIFRA (Federal Insecticide, Fungicide, and Rodenticide Act) and TSCA (Toxic Substances Control Act). Some EPA regions are now closing out records. Because of that, and the fact that some EPA regions are not providing EPA Headquarters with updated records, it was decided to create a HIST FTTS database. It included records that may not be included in the newer FTTS database updates. This database is no longer updated.

A review of the HIST FTTS list, as provided by EDR, has revealed that there are 4 HIST FTTS sites within the searched area.

SSTS: Section 7 of the Federal Insecticide, Fungicide and Rodenticide Act, as amended (92 Stat. 829) requires all registered pesticide-producing establishments to submit a report to the Environmental Protection Agency by March 1st each year. Each establishment must report the types and amounts of pesticides, active ingredients and devices being produced, and those having been produced and sold or distributed in the past year.

A review of the SSTS list, as provided by EDR, and dated 12/31/2009 has revealed that there is 1 SSTS site within the searched area.

RAATS: The RCRA Administration Action Tracking System contains records based on enforcement actions issued under RCRA and pertaining to major violators. It includes administrative and civil actions brought by the United States Environmental Protection Agency. The source of this database is the U.S. EPA.

A review of the RAATS list, as provided by EDR, and dated 04/17/1995 has revealed that there is 1 RAATS site within the searched area.

RMP: When Congress passed the Clean Air Act Amendments of 1990, it required EPA to publish regulations and guidance for chemical accident prevention at facilities using extremely hazardous substances. The Risk Management Program Rule (RMP Rule) was written to implement Section 112(r) of these amendments. The rule, which built upon existing industry codes and standards, requires companies of all sizes that use certain flammable and toxic substances to develop a Risk Management Program, which includes a(n): Hazard assessment that details the potential effects of an accidental release, an accident history of the last five years, and an evaluation of worst-case and alternative accidental releases; Prevention program that includes safety precautions and maintenance, monitoring, and employee training measures; and Emergency response program that spells out emergency health care, employee training measures and procedures for informing the public and response agencies (e.g the fire department) should an accident occur.

A review of the RMP list, as provided by EDR, and dated 04/25/2019 has revealed that there are 13 RMP sites within the searched area.

US AIRS: The database is a sub-system of Aerometric Information Retrieval System (AIRS). AFS contains compliance data on air pollution point sources regulated by the U.S. EPA and/or state and local air regulatory agencies. This information comes from source reports by various stationary sources of air pollution, such as electric power plants, steel mills, factories, and universities, and provides information about the air pollutants they produce. Action, air program, air program pollutant, and general level plant data. It is used to track emissions and compliance data from industrial plants.

A review of the US AIRS list, as provided by EDR, has revealed that there are 43 US AIRS sites within the searched area.

EXECUTIVE SUMMARY

ABANDONED MINES: An inventory of land and water impacted by past mining (primarily coal mining) is maintained by OSMRE to provide information needed to implement the Surface Mining Control and Reclamation Act of 1977 (SMCRA). The inventory contains information on the location, type, and extent of AML impacts, as well as, information on the cost associated with the reclamation of those problems. The inventory is based upon field surveys by State, Tribal, and OSMRE program officials. It is dynamic to the extent that it is modified as new problems are identified and existing problems are reclaimed.

A review of the ABANDONED MINES list, as provided by EDR, and dated 03/27/2019 has revealed that there are 3 ABANDONED MINES sites within the searched area.

Site	Address	Map ID
NO 8 MINE		276-25
NO 1 STRIP		395-29
NO 1 MINE		425-32

2020 COR ACTION: The EPA has set ambitious goals for the RCRA Corrective Action program by creating the 2020 Corrective Action Universe. This RCRA cleanup baseline includes facilities expected to need corrective action. The 2020 universe contains a wide variety of sites. Some properties are heavily contaminated while others were contaminated but have since been cleaned up. Still others have not been fully investigated yet, and may require little or no remediation. Inclusion in the 2020 Universe does not necessarily imply failure on the part of a facility to meet its RCRA obligations.

A review of the 2020 COR ACTION list, as provided by EDR, and dated 09/30/2017 has revealed that there are 3 2020 COR ACTION sites within the searched area.

STATE AND LOCAL RECORDS

VA SWF/LF: The Solid Waste Management Facilities/Landfill Sites records typically contain an inventory of solid waste disposal facilities or landfills in a particular state. The data come from the Department of Environmental Quality's Permitted Facilities list.

A review of the VA SWF/LF list, as provided by EDR, and dated 03/04/2019 has revealed that there are 5 VA SWF/LF sites within the searched area.

VA UST: The Underground Storage Tank database contains registered USTs. USTs are regulated under Subtitle I of the Resource Conservation and Recovery Act (RCRA). The data come from the Department of Environmental Quality's Underground Storage Tank Data Notification Information.

A review of the VA UST list, as provided by EDR, and dated 05/15/2019 has revealed that there are 152 VA UST sites within the searched area.

EXECUTIVE SUMMARY

VA SPILLS: The Department of Environmental Quality's POLLUTION RESPONSE PROGRAM, known as PREP, provides for responses to air, water, and waste pollution incidents in order to protect human health and the environment. PREP staff often work to assist local emergency responders, other state agencies, federal agencies, and responsible parties, as may be needed, to manage pollution incidents. Oil spills, fish kills, and hazardous materials spills are examples of incidents that may involve the DEQ's PREP Program.

A review of the VA SPILLS list, as provided by EDR, has revealed that there are 136 VA SPILLS sites within the searched area.

Facility ID: VRP00266		

VA VCP: The Voluntary Remediation Program encourages owners of selected contaminated sites to take the initiative to conduct voluntary cleanups that meet state environmental standards. These sites are generally either open dumps or unpermitted solid waste disposal facilities. VRP sites can not be listed on the NPL, nor can they involve disposed RCRA hazardous wastes. The source of this data is the Department of Environmental Quality.

A review of the VA VCP list, as provided by EDR, and dated 04/09/2019 has revealed that there are 4 VA VCP sites within the searched area.

VA BROWNFIELDS: To qualify for Brownfields Assessment, the site must meet the Federal definition of a Brownfields and should have contaminant issues that need to be addressed and a redevelopment plan supported by the local government and community. Virginia's Department of Environmental Quality performs brownfields assessments under a cooperative agreement with the U.S. Environmental Protection Agency at no cost to communities, property owners or, prospective purchasers. The assessment is an evaluation of environmental impacts caused by previous site uses similar to a Phase II Environmental Assessment

A review of the VA BROWNFIELDS list, as provided by EDR, and dated 04/23/2019 has revealed that there is 1 VA BROWNFIELDS site within the searched area.

EDR PROPRIETARY RECORDS

EDR Hist Auto: EDR has searched selected national collections of business directories and has collected listings of potential gas station/filling station/service station sites that were available to EDR researchers. EDR's review was limited to those categories of sources that might, in EDR's opinion, include gas station/filling station/service station establishments. The categories reviewed included, but were not limited to gas, gas station, gasoline station, filling station, auto, automobile repair, auto service station, service station, etc. This database falls within a category of information EDR classifies as "High Risk

Historical Records", or HRHR. EDR's HRHR effort presents unique and sometimes proprietary data about past sites and operations that typically create environmental concerns, but may not show up in current government records searches.

A review of the EDR Hist Auto list, as provided by EDR, has revealed that there are 47 EDR Hist Auto sites within the searched area.

EXECUTIVE SUMMARY

EDR Hist Cleaner: EDR has searched selected national collections of business directories and has collected listings of potential dry cleaner sites that were available to EDR researchers. EDR's review was limited to those categories of sources that might, in EDR's opinion, include dry cleaning establishments. The categories reviewed included, but were not limited to dry cleaners, cleaners, laundry, laundromat, cleaning/laundry, wash & dry etc. This database falls within a category of information EDR classifies as "High Risk Historical Records", or HRHR. EDR's HRHR effort presents unique and sometimes proprietary data about past sites and operations that typically create environmental concerns, but may not show up in current government records searches.

A review of the EDR Hist Cleaner list, as provided by EDR, has revealed that there are 10 EDR Hist Cleaner sites within the searched area.

VA RGA LUST: The EDR Recovered Government Archive Leaking Underground Storage Tank database provides a list of LUST incidents derived from historical databases and includes many records that no longer appear in current government lists. Compiled from Records formerly available from the Department of Environmental Quality in Virgina and at the Regional VA Levels.

A review of the VA RGA LUST list, as provided by EDR, has revealed that there are 117 VA RGA LUST sites within the searched area.

Environmental Interest/Information System
ICIS (Integrated Compliance Information System) is the Integrated Compliance Information System and provides a database that, when complete, will contain integrated Enforcement and Compliance information across most of EPA's programs. The vision for ICIS is to replace EPA's independent databases that contain Enforcement data with a single repository for that information. Currently, ICIS contains all Federal Administrative and Judicial enforcement actions. This information is maintained in ICIS by EPA in the Regional offices and it Headquarters. A future release of ICIS will replace the Permit Compliance System (PCS) which supports the NPDES and will integrate that information with Federal actions already in the system. ICIS also has the capability to track other activities occurring in the Region that support Compliance and Enforcement programs. These include; Incident Tracking, Compliance Assistance, and Compliance Monitoring.

Click this hyperlink while viewing on your computer to access additional FINDS: detail in the EDR Site Report.

Name:	Not reported
Address:	4130 MT. ZION ROAD
City,State,Zip:	BLACKSBURG, VA
Fips City/County:	Montgomery County
Status:	Closed
Reference Id:	98287
IR Number:	2017-W-3373
Associated IR:	Not reported
Incident Date:	05/21/2017
Call Received Date:	05/22/2017
Closure Comments:	RSW performed a site visit on this date. Complainant was not home but his son was and allowed me to view the creek where it flows past their property. No sheen or signs of stream bank fouling were observed. No obvious up-stream sources are known. I left a card with the son and asked him to have his father call me to discuss at this leisure or to report additional instances of sheen he may observe. No further PReP action at this time.

Registry ID: 110005290997

Environmental Interest/Information System
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Click this hyperlink while viewing on your computer to access additional FINDS: detail in the EDR Site Report.

Cause Of Event:	We suspect that a very recent electrical line underground boring installation has damaged the sewer lateral and may in fact have been run right through it.
Corrective Action Taken:	The sewer repair will be completed on Saturday October 27th. Until this repair has been completed, all sinks and toilets in the Fire Station have been placed out of order by the Fire Department.

Site Summary:	Ms. Kibler: This is to provide notification of a sanitary sewer release within the Town of Blacksburg this morning at 2700 Prices Fork Road. Sanitary sewer technicians were notified at approximately 8:25 am of a suspected release from a clean-out to the Blacksburg Fire Station. The technicians arrived at the location by 8:45 am and verified the release. The technicians attempted to remove a blockage within the sewer lateral but were unsuccessful in jetting through the blockage. We suspect that a very recent electrical line underground boring installation has damaged the sewer lateral and may in fact have been run right through it. Given the proximity of the blockage to the edge of Prices Fork Road, a repair would necessitate a full lane closure. Since today is a Virginia Tech football game day, closing a lane of Prices Fork would be too disruptive to traffic. The sewer repair will be completed on Saturday October 27th. Until this repair has been completed, all sinks and toilets in the Fire Station have been placed out of order by the Fire Department. An estimated 150 gallons of effluent exited the clean-out onto the adjacent ground surface and parking lot. None of the effluent reached a water source. Technicians applied a disinfectant to the impacted area prior to leaving the site. Please let me know if you need any additional information or have any questions on this matter.Sincerely,Kelly Mattingly

BLACKSBURG, VA 24060

FINDS:

Registry ID: 110001908829

Environmental Interest/Information System
AFS (Aerometric Information Retrieval System (AIRS) Facility Subsystem) replaces the former Compliance Data System (CDS), the National Emission Data System (NEDS), and the Storage and Retrieval of Aerometric Data (SAROAD). AIRS is the national repository for information concerning airborne pollution in the United States. AFS is used to track emissions and compliance data from industrial plants.

Map ID	Site	Database(s)	EPA ID Number

TOMORE PROFESSIONAL CLEANERS (Continued) **1016123141**

AFS data are utilized by states to prepare State Implementation Plans to comply with regulatory programs and by EPA as an input for the estimation of total national emissions. AFS is undergoing a major redesign to support facility operating permits required under Title V of the Clean Air Act.

CEDS (Virginia - Comprehensive Environmental Data System) is the Department of Environmental Quality's (DEQ) electronic data system for maintaining databases on sources of pollutants in all media.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

FINDS:

Registry ID: 110005291068

Environmental Interest/Information System

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Environmental Interest/Information System
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Biennial Reports:

Last Biennial Reporting Year: 2017

Annual Waste Handled:
Waste code: D001
Waste name: IGNITABLE HAZARDOUS WASTES ARE THOSE WASTES WHICH HAVE A FLASHPOINT OF LESS THAN 140 DEGREES FAHRENHEIT AS DETERMINED BY A PENSKY-MARTENS CLOSED CUP FLASH POINT TESTER. ANOTHER METHOD OF DETERMINING THE FLASH POINT OF A WASTE IS TO REVIEW THE MATERIAL SAFETY DATA SHEET, WHICH CAN BE OBTAINED FROM THE MANUFACTURER OR DISTRIBUTOR OF THE MATERIAL. LACQUER THINNER IS AN EXAMPLE OF A COMMONLY USED SOLVENT WHICH WOULD BE CONSIDERED AS IGNITABLE HAZARDOUS WASTE.
Amount (Lbs): 71

DBA RITE AID #1181 (Continued) **1016150588**

Waste name:	A WASTE WHICH HAS A PH OF LESS THAN 2 OR GREATER THAN 12.5 IS CONSIDERED TO BE A CORROSIVE HAZARDOUS WASTE. SODIUM HYDROXIDE, A CAUSTIC SOLUTION WITH A HIGH PH, IS OFTEN USED BY INDUSTRIES TO CLEAN OR DEGREASE PARTS. HYDROCHLORIC ACID, A SOLUTION WITH A LOW PH, IS USED BY MANY INDUSTRIES TO CLEAN METAL PARTS PRIOR TO PAINTING. WHEN THESE CAUSTIC OR ACID SOLUTIONS BECOME CONTAMINATED AND MUST BE DISPOSED, THE WASTE WOULD BE A CORROSIVE HAZARDOUS WASTE.

. Waste name: CARBARYL (OR) 1-NAPHTHALENOL, METHYLCARBAMATE

. Waste code: U411
. Waste name: PHENOL, 2-(1-METHYLETHOXY)-, METHYLCARBAMATE (OR) PROPOXUR

Biennial Reports:

Last Biennial Reporting Year: 2017

Annual Waste Handled:

Waste code: D001
Waste name: IGNITABLE HAZARDOUS WASTES ARE THOSE WASTES WHICH HAVE A FLASHPOINT OF LESS THAN 140 DEGREES FAHRENHEIT AS DETERMINED BY A PENSKY-MARTENS CLOSED CUP FLASH POINT TESTER. ANOTHER METHOD OF DETERMINING THE FLASH POINT OF A WASTE IS TO REVIEW THE MATERIAL SAFETY DATA SHEET, WHICH CAN BE OBTAINED FROM THE MANUFACTURER OR DISTRIBUTOR OF THE MATERIAL. LACQUER THINNER IS AN EXAMPLE OF A COMMONLY USED SOLVENT WHICH WOULD BE CONSIDERED AS IGNITABLE HAZARDOUS WASTE.
Amount (Lbs): 82

Waste code: D002
Waste name: A WASTE WHICH HAS A PH OF LESS THAN 2 OR GREATER THAN 12.5 IS CONSIDERED TO BE A CORROSIVE HAZARDOUS WASTE. SODIUM HYDROXIDE, A

Map ID	Site	Database(s)	EPA ID Number

CVS PHARMACY #3460 (Continued) **1014962013**

CAUSTIC SOLUTION WITH A HIGH PH, IS OFTEN USED BY INDUSTRIES TO CLEAN OR DEGREASE PARTS. HYDROCHLORIC ACID, A SOLUTION WITH A LOW PH, IS USED BY MANY INDUSTRIES TO CLEAN METAL PARTS PRIOR TO PAINTING. WHEN THESE CAUSTIC OR ACID SOLUTIONS BECOME CONTAMINATED AND MUST BE DISPOSED, THE WASTE WOULD BE A CORROSIVE HAZARDOUS WASTE.

Amount (Lbs): 3

Waste code: D007
Waste name: CHROMIUM
Amount (Lbs): 33

Waste code: D009
Waste name: MERCURY
Amount (Lbs): 24

Waste code: D010
Waste name: SELENIUM
Amount (Lbs): 33

Waste code: D024
Waste name: M-CRESOL
Amount (Lbs): 23

Waste code: P001
Waste name: 2H-1-BENZOPYRAN-2-ONE, 4-HYDROXY-3-(3-OXO-1-PHENYLBUTYL)-, & SALTS, WHEN PRESENT AT CONCENTRATIONS GREATER THAN 0.3%
Amount (Lbs): 26

Waste code: P075
Waste name: NICOTINE, & SALTS
Amount (Lbs): 21

Waste code: U002
Waste name: ACETONE (I)
Amount (Lbs): 42

FINDS:

Registry ID: 110069459348

Environmental Interest/Information System
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Click this hyperlink while viewing on your computer to access additional FINDS: detail in the EDR Site Report.

RAYMOND EAST RESIDENCE (Continued) **S107998927**

Call Property Owner Name: Not reported
Site Summary: "6 February, 2006 -- I investigated a complaint regarding burning of solid wastes, and also a sheen appearing after rains on a small unnamed tributary of Back Creek, at 7485 Lillydell Circle, off Route 100 near Dublin. No one was home at the time of my visit. I left my business card in the doors of the home and a large garage near the stream. I did not observe any evidence of waste burning during my visit. However, I did notice vehicle parts placed on a parking area near the stream, some of which were directly on the bank.7 February, 2006 -- Mr. Raymond East, the property owner called me in response to the business card in his door. He indicated that he would cooperate with us in any way necessary. We arranged for me to meet his wife at their home at 1:30 PM on 15 February15 February, 2006 -- I was unable to attend the meeting, and was unable to contact Mr. East. I had not asked for his phone number during our conversation, and I was unable to find their telephone number.6 March, 2006 -- Ronnie Combs also visited the site in an attempt to meet one of the owners. No one was home at the time.15 March, 2006 -- I sent a letter to Mr. East asking him to contact me, and also explaining the nature of the complaint27 March, 2006 -- I met Mr. East at his property. He has a 2-bay garage where he works on vehicles and racecars for frineds and family. Mr. East accompanied me while I examined the areas near the stream. While there were several partial automobiles, frames, and engine blocks near the stream bank, I found no evidence of oil or other leaks on the ground benenath the parts, on the bank or in the stream. Regarding the waste burning, I noticed an area of ashes along the short embankment leading up to Mr. East s garage. When asked, Mr. East explained that this was the area where he dumped ashes from the woodstove used to heat his garage. In summary, it appears this polltuion report was unfounded, and I recommend case closure."

Environmental Interest/Information System

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Click this hyperlink while viewing on your computer to access additional FINDS: detail in the EDR Site Report.

FINDS:

Registry ID: 110005291004

Environmental Interest/Information System
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Click this hyperlink while viewing on your computer to access additional FINDS: detail in the EDR Site Report.

Environmental Interest/Information System

AFS (Aerometric Information Retrieval System (AIRS) Facility Subsystem) replaces the former Compliance Data System (CDS), the National Emission Data System (NEDS), and the Storage and Retrieval of Aerometric Data (SAROAD). AIRS is the national repository for information concerning airborne pollution in the United States. AFS is used to track emissions and compliance data from industrial plants. AFS data are utilized by states to prepare State Implementation Plans to comply with regulatory programs and by EPA as an input for the estimation of total national emissions. AFS is undergoing a major redesign to support facility operating permits required under Title V of the Clean Air Act.

CEDS (Virginia - Comprehensive Environmental Data System) is the Department of Environmental Quality's (DEQ) electronic data system for maintaining databases on sources of pollutants in all media.

US National Pollutant Discharge Elimination System (NPDES) module of the Compliance Information System (ICIS) tracks surface water permits issued under the Clean Water Act. Under NPDES, all facilities that discharge pollutants from any point source into waters of the United States are required to obtain a permit. The permit will likely contain limits on what can be discharged, impose monitoring and reporting requirements, and include other provisions to ensure that the discharge does not adversely affect water quality.

Entered Chemical Name: Ethanol (Ethyl alcohol)
Average Amt Code: 6
Owner Name: Jon Drushal
Owner Phone: (540) 639-8711
Contact Type: Not reported

Facility ID: Not reported
CAS Number: 119-75-5
SIC Code: 2892
NAICS: Not reported
Entered Chemical Name: 2-Nitrodiphenylamine (2-NDPA)
Average Amt Code: 4
Owner Name: Jon Drushal
Owner Phone: (540) 639-8711
Contact Type: Not reported

Facility ID: Not reported
CAS Number: 7782-50-5
SIC Code: 2892
NAICS: Not reported
Entered Chemical Name: Chlorine
Average Amt Code: 3
Owner Name: Jon Drushal
Owner Phone: (540) 639-8711
Contact Type: Not reported

Facility ID: Not reported
CAS Number: 7647-14-5
SIC Code: 332993
NAICS: Not reported
Entered Chemical Name: Sodium Chloride
Average Amt Code: 5
Owner Name: U.S. Army Alliant Techsystems, Inc.
Owner Phone: (540) 639-7631
Contact Type: Not reported

Facility ID: Not reported
CAS Number: 13463-67-7
SIC Code: 332993
NAICS: Not reported
Entered Chemical Name: Titanium dioxide
Average Amt Code: 4
Owner Name: U.S. Army Alliant Techsystems, Inc.

Map ID	Site	Database(s)	EPA ID Number

Site Summary:	Ms. Kibler: This is to provide notification of a sanitary sewer release within the Town of Blacksburg this morning at 2700 Prices Fork Road. Sanitary sewer technicians were notified at approximately 8:25 am of a suspected release from a clean-out to the Blacksburg Fire Station. The technicians arrived at the location by 8:45 am and verified the release. The technicians attempted to remove a blockage within the sewer lateral but were unsuccessful in jetting through the blockage. We suspect that a very recent electrical line underground boring installation has damaged the sewer lateral and may in fact have been run right through it. Given the proximity of the blockage to the edge of Prices Fork Road, a repair would necessitate a full lane closure. Since today is a Virginia Tech football game day, closing a lane of Prices Fork would be too disruptive to traffic. The sewer repair will be completed on Saturday October 27th. Until this repair has been completed, all sinks and toilets in the Fire Station have been placed out of order by the Fire Department. An estimated 150 gallons of effluent exited the clean-out onto the adjacent ground surface and parking lot. None of the effluent reached a water source. Technicians applied a disinfectant to the impacted area prior to leaving the site. Please let me know if you need any additional information or have any questions on this matter.Sincerely,Kelly Mattingly

Environmental Interest/Information System

AFS (Aerometric Information Retrieval System (AIRS) Facility Subsystem) replaces the former Compliance Data System (CDS), the National Emission Data System (NEDS), and the Storage and Retrieval of Aerometric Data (SAROAD). AIRS is the national repository for information concerning airborne pollution in the United States. AFS is used to track emissions and compliance data from industrial plants. AFS data are utilized by states to prepare State Implementation Plans to comply with regulatory programs and by EPA as an input for the estimation of total national emissions. AFS is undergoing a major redesign to support facility operating permits required under Title V of the Clean Air Act.

CEDS (Virginia - Comprehensive Environmental Data System) is the Department of Environmental Quality's (DEQ) electronic data system for maintaining databases on sources of pollutants in all media.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport,

Map ID	Site	Database(s)	EPA ID Number

TOMORE PROFESSIONAL CLEANERS (Continued) **1016123141**

and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Environmental Interest/Information System
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Click this hyperlink while viewing on your computer to access additional FINDS: detail in the EDR Site Report.

Environmental Interest/Information System
AFS (Aerometric Information Retrieval System (AIRS) Facility Subsystem) replaces the former Compliance Data System (CDS), the National Emission Data System (NEDS), and the Storage and Retrieval of Aerometric Data (SAROAD). AIRS is the national repository for information concerning airborne pollution in the United States. AFS is used to track emissions and compliance data from industrial plants. AFS data are utilized by states to prepare State Implementation Plans to comply with regulatory programs and by EPA as an input for the estimation of total national emissions. AFS is undergoing a major redesign to support facility operating permits required under Title V of the Clean Air Act.

Call Property Owner Company Name:	Not reported
Call Property Owner Name:	Not reported
Site Summary:	"18 July, 2005 -- DEQ staff (A. Linkenhoker) investigated. Noted fresh gravel in area of previous contamination. Some washing and reworking of gravel by heavy rains, site otherwise stabilized. Did observe some sheen on spring discharge by road, no diesel odor detected, most likely algal sheen. Water cress observed growing in spring discharge downstream. 23 August, 2005 -- DEQ staff (A. Linkenhoker) reviewed the final report on the cleanup from One Environmental. A disposal manifest was provided upon request. Staff recommends case closure based on site observations and review of the report and manifest."

RAYMOND EAST RESIDENCE (Continued) **S107998927**

Call Property Owner Name: Not reported
Site Summary: "6 February, 2006 -- I investigated a complaint regarding burning of solid wastes, and also a sheen appearing after rains on a small unnamed tributary of Back Creek, at 7485 Lillydell Circle, off Route 100 near Dublin. No one was home at the time of my visit. I left my business card in the doors of the home and a large garage near the stream. I did not observe any evidence of waste burning during my visit. However, I did notice vehicle parts placed on a parking area near the stream, some of which were directly on the bank.7 February, 2006 -- Mr. Raymond East, the property owner called me in response to the business card in his door. He indicated that he would cooperate with us in any way necessary. We arranged for me to meet his wife at their home at 1:30 PM on 15 February15 February, 2006 -- I was unable to attend the meeting, and was unable to contact Mr. East. I had not asked for his phone number during our conversation, and I was unable to find their telephone number.6 March, 2006 -- Ronnie Combs also visited the site in an attempt to meet one of the owners. No one was home at the time.15 March, 2006 -- I sent a letter to Mr. East asking him to contact me, and also explaining the nature of the complaint27 March, 2006 -- I met Mr. East at his property. He has a 2-bay garage where he works on vehicles and racecars for frineds and family. Mr. East accompanied me while I examined the areas near the stream. While there were several partial automobiles, frames, and engine blocks near the stream bank, I found no evidence of oil or other leaks on the ground benenath the parts, on the bank or in the stream. Regarding the waste burning, I noticed an area of ashes along the short embankment leading up to Mr. East s garage. When asked, Mr. East explained that this was the area where he dumped ashes from the woodstove used to heat his garage. In summary, it appears this polltuion report was unfounded, and I recommend case closure."

Environmental Interest/Information System

ICIS (Integrated Compliance Information System) is the Integrated Compliance Information System and provides a database that, when complete, will contain integrated Enforcement and Compliance information across most of EPA's programs. The vision for ICIS is to replace EPA's independent databases that contain Enforcement data with a single repository for that information. Currently, ICIS contains all Federal Administrative and Judicial enforcement actions. This information is maintained in ICIS by EPA in the Regional offices and it Headquarters. A future release of ICIS will replace the Permit Compliance System (PCS) which supports the NPDES and will integrate that information with Federal actions already in the system. ICIS also has the capability to track other activities occurring in the Region that support Compliance and Enforcement programs. These include; Incident Tracking, Compliance Assistance, and Compliance Monitoring.

FINDS:

Registry ID: 110005290452

Environmental Interest/Information System
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Click this hyperlink while viewing on your computer to access additional FINDS: detail in the EDR Site Report.

Environmental Interest/Information System

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

FINDS:

Registry ID: 110061641736

Environmental Interest/Information System
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Click this hyperlink while viewing on your computer to access additional FINDS: detail in the EDR Site Report.

Environmental Interest/Information System
AFS (Aerometric Information Retrieval System (AIRS) Facility Subsystem) replaces the former Compliance Data System (CDS), the National Emission Data System (NEDS), and the Storage and Retrieval of Aerometric Data (SAROAD). AIRS is the national repository for information concerning airborne pollution in the United States. AFS is used to track emissions and compliance data from industrial plants. AFS data are utilized by states to prepare State Implementation Plans to comply with regulatory programs and by EPA as an input for the estimation of total national emissions. AFS is undergoing a major redesign to support facility operating permits required under Title V of the Clean Air Act.

CEDS (Virginia - Comprehensive Environmental Data System) is the Department of Environmental Quality's (DEQ) electronic data system for maintaining databases on sources of pollutants in all media.

Environmental Interest/Information System
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

the fence line. DEQ staff returned to the site on May 1, 2001 and asked Mr. Meredith to clean up the material and dispose of the material properly. Mr. Meredith was observed to be in poor health and told Mr. Meredith that we would work with him on the clean-up. DEQ staff returned to the site on May 17, 2001 and observed that all petroleum saturated soils and gravel had been removed. Mr. Meredith stated that he had taken the material to the regional landfill. DEQ recommends that this case be closed."

Environmental Interest/Information System

AFS (Aerometric Information Retrieval System (AIRS) Facility Subsystem) replaces the former Compliance Data System (CDS), the National Emission Data System (NEDS), and the Storage and Retrieval of Aerometric Data (SAROAD). AIRS is the national repository for information concerning airborne pollution in the United States. AFS is used to track emissions and compliance data from industrial plants. AFS data are utilized by states to prepare State Implementation Plans to comply with regulatory programs and by EPA as an input for the estimation of total national emissions. AFS is undergoing a major redesign to support facility operating permits required under Title V of the Clean Air Act.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Environmental Interest/Information System

CEDS (Virginia - Comprehensive Environmental Data System) is the Department of Environmental Quality's (DEQ) electronic data system for maintaining databases on sources of pollutants in all media.

ICIS (Integrated Compliance Information System) is the Integrated Compliance Information System and provides a database that, when complete, will contain integrated Enforcement and Compliance information across most of EPA's programs. The vision for ICIS is to replace EPA's independent databases that contain Enforcement data with a single repository for that information. Currently, ICIS contains all Federal Administrative and Judicial enforcement actions. This information is maintained in ICIS by EPA in the Regional offices and it Headquarters. A future release of ICIS will replace the Permit Compliance System (PCS) which supports the NPDES and will integrate that information with Federal actions already in the system. ICIS also has the capability to track other activities occurring in the Region that support Compliance and Enforcement programs. These include; Incident Tracking, Compliance Assistance, and Compliance Monitoring.

Click this hyperlink while viewing on your computer to access additional FINDS: detail in the EDR Site Report.

Site Summary:	On 2-23-16 at 1435, untreated sewage was discharged into a culvert that leads to the New River from a main line blockage located at 6307 Madison Avenue, Fairlawn, VA. The estimated amount is 800 gallons and the estimated duration is 1 hour. Richard reports that the overflow was cleaned up by vacuum truck prior to entry to the river; however, residual which soaked into the soil of the ditch line could wash into the river during heavy rain.

Facility:

Name:	FOOD TIME 63
Address:	7426 LEE HWY
City,State,Zip:	RADFORD, VA 24141
Facility Id:	2011612
Facility Type:	GAS STATION
CEDS Facility ID:	200000093874

Owner:

Owner Id:	27433
Owner Name:	Conny Oil Inc
Owner Address:	812 Missouri Ave NE
Owner Address2:	Not reported
Owner City, State, Zip:	Roanoke, VA 24012
Owner Type:	COMMERCIAL
Number of Active AST:	0
Number of Active UST:	0
Number of Inactive AST:	0
Number of Inactive UST:	7

Owner Id:	32336
Owner Name:	Wadco Petroleum Inc
Owner Address:	510 Roanoke St
Owner Address2:	Not reported
Owner City, State, Zip:	Christiansburg, VA 24073
Owner Type:	COMMERCIAL
Number of Active AST:	0
Number of Active UST:	0
Number of Inactive AST:	0
Number of Inactive UST:	7

UST:

Facility ID:	2011612
Federally Regulated:	Yes
Tank Number:	R1
Tank Capacity:	10000
Tank Contents:	GASOLINE
Tank Status:	**REM FROM GRD**
Tank Type:	UST

Tank Material:

Install Date:	7/1/1988
Tank Materials: Bare Steel	No
Tank Materials: Cath Protect Steel	Yes
Tank Materials: Epoxy Steel	No

Environmental Interest/Information System

ICIS (Integrated Compliance Information System) is the Integrated Compliance Information System and provides a database that, when complete, will contain integrated Enforcement and Compliance information across most of EPA's programs. The vision for ICIS is to replace EPA's independent databases that contain Enforcement data with a single repository for that information. Currently, ICIS contains all Federal Administrative and Judicial enforcement actions. This information is maintained in ICIS by EPA in the Regional offices and it Headquarters. A future release of ICIS will replace the Permit Compliance System (PCS) which supports the NPDES and will integrate that information with Federal actions already in the system. ICIS also has the capability to track other activities occurring in the Region that support Compliance and Enforcement programs. These include; Incident Tracking, Compliance Assistance, and Compliance Monitoring.

Biennial Reports:

Last Biennial Reporting Year: 2017

Annual Waste Handled:

Waste code: D001
Waste name: IGNITABLE HAZARDOUS WASTES ARE THOSE WASTES WHICH HAVE A FLASHPOINT OF LESS THAN 140 DEGREES FAHRENHEIT AS DETERMINED BY A PENSKY-MARTENS CLOSED CUP FLASH POINT TESTER. ANOTHER METHOD OF DETERMINING THE FLASH POINT OF A WASTE IS TO REVIEW THE MATERIAL SAFETY DATA SHEET, WHICH CAN BE OBTAINED FROM THE MANUFACTURER OR DISTRIBUTOR OF THE MATERIAL. LACQUER THINNER IS AN EXAMPLE OF A COMMONLY USED SOLVENT WHICH WOULD BE CONSIDERED AS IGNITABLE HAZARDOUS WASTE.
Amount (Lbs): 65

Waste code: D002
Waste name: A WASTE WHICH HAS A PH OF LESS THAN 2 OR GREATER THAN 12.5 IS CONSIDERED TO BE A CORROSIVE HAZARDOUS WASTE. SODIUM HYDROXIDE, A CAUSTIC SOLUTION WITH A HIGH PH, IS OFTEN USED BY INDUSTRIES TO CLEAN OR DEGREASE PARTS. HYDROCHLORIC ACID, A SOLUTION WITH A LOW PH, IS USED BY MANY INDUSTRIES TO CLEAN METAL PARTS PRIOR TO PAINTING. WHEN THESE CAUSTIC OR ACID SOLUTIONS BECOME CONTAMINATED AND MUST BE DISPOSED, THE WASTE WOULD BE A CORROSIVE HAZARDOUS WASTE.
Amount (Lbs): 6

Waste code: D007
Waste name: CHROMIUM
Amount (Lbs): 26

Waste code: D010
Waste name: SELENIUM
Amount (Lbs): 26

Waste code: D011
Waste name: SILVER
Amount (Lbs): 18

Waste code: P001
Waste name: 2H-1-BENZOPYRAN-2-ONE, 4-HYDROXY-3-(3-OXO-1-PHENYLBUTYL)-, & SALTS, WHEN PRESENT AT CONCENTRATIONS GREATER THAN 0.3%
Amount (Lbs): 56

Waste code: P075
Waste name: NICOTINE, & SALTS
Amount (Lbs): 51

Waste code: U002
Waste name: ACETONE (I)
Amount (Lbs): 44

KETONE, CARBON DISULFIDE, ISOBUTANOL, PYRIDINE, BENZENE, 2-ETHOXYETHANOL, AND 2-NITROPROPANE; ALL SPENT SOLVENT MIXTURES/BLENDS CONTAINING, BEFORE USE, A TOTAL OF TEN PERCENT OR MORE (BY VOLUME) OF ONE OR MORE OF THE ABOVE NONHALOGENATED SOLVENTS OR THOSE SOLVENTS LISTED IN F001, F002, OR F004; AND STILL BOTTOMS FROM THE RECOVERY OF THESE SPENT SOLVENTS AND SPENT SOLVENT MIXTURES.

Violation Status: No violations found

Evaluation Action Summary:
Evaluation date: 09/02/2010
Evaluation: COMPLIANCE EVALUATION INSPECTION ON-SITE
Area of violation: Not reported
Date achieved compliance: Not reported
Evaluation lead agency: State

FINDS:

Registry ID: 110005256267

Environmental Interest/Information System
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Environmental Interest/Information System

AFS (Aerometric Information Retrieval System (AIRS) Facility Subsystem) replaces the former Compliance Data System (CDS), the National Emission Data System (NEDS), and the Storage and Retrieval of Aerometric Data (SAROAD). AIRS is the national repository for information concerning airborne pollution in the United States. AFS is used to track emissions and compliance data from industrial plants. AFS data are utilized by states to prepare State Implementation Plans to comply with regulatory programs and by EPA as an input for the estimation of total national emissions. AFS is undergoing a major redesign to support facility operating permits required under Title V of the Clean Air Act.

CEDS (Virginia - Comprehensive Environmental Data System) is the Department of Environmental Quality's (DEQ) electronic data system for maintaining databases on sources of pollutants in all media.

FINDS:

Registry ID: 110005226362

Environmental Interest/Information System

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Click this hyperlink while viewing on your computer to access additional FINDS: detail in the EDR Site Report.

Underground injection activity: No
On-site burner exemption: No
Furnace exemption: No
Used oil fuel burner: No
Used oil processor: No
User oil refiner: No
Used oil fuel marketer to burner: No
Used oil Specification marketer: No
Used oil transfer facility: No
Used oil transporter: No

Historical Generators:
Date form received by agency: 05/14/1990
Site name: VAARNG-ARMORY-RADFORD
Classification: Conditionally Exempt Small Quantity Generator

Hazardous Waste Summary:

. Waste code: D000
. Waste name: Not Defined

. Waste code: D001
. Waste name: IGNITABLE WASTE

. Waste code: D002
. Waste name: CORROSIVE WASTE

. Waste code: D006
. Waste name: CADMIUM

. Waste code: D007
. Waste name: CHROMIUM

. Waste code: D008
. Waste name: LEAD

. Waste code: D011

Map ID	Site	Database(s)	EPA ID Number

VAARNG-READINESS CENTER-RADFORD (Continued) **1004789687**

. Waste name: SILVER

. Waste code: F001
. Waste name: THE FOLLOWING SPENT HALOGENATED SOLVENTS USED IN DEGREASING: TETRACHLOROETHYLENE, TRICHLORETHYLENE, METHYLENE CHLORIDE, 1,1,1-TRICHLOROETHANE, CARBON TETRACHLORIDE AND CHLORINATED FLUOROCARBONS; ALL SPENT SOLVENT MIXTURES/BLENDS USED IN DEGREASING CONTAINING, BEFORE USE, A TOTAL OF TEN PERCENT OR MORE (BY VOLUME) OF ONE OR MORE OF THE ABOVE HALOGENATED SOLVENTS OR THOSE SOLVENTS LISTED IN F002, F004, AND F005; AND STILL BOTTOMS FROM THE RECOVERY OF THESE SPENT SOLVENTS AND SPENT SOLVENT MIXTURES.

Violation Status: No violations found

FINDS:

Registry ID: 110008190233

Environmental Interest/Information System
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Click this hyperlink while viewing on your computer to access additional FINDS: detail in the EDR Site Report.

National Emission Data System (NEDS), and the Storage and Retrieval of Aerometric Data (SAROAD). AIRS is the national repository for information concerning airborne pollution in the United States. AFS is used to track emissions and compliance data from industrial plants. AFS data are utilized by states to prepare State Implementation Plans to comply with regulatory programs and by EPA as an input for the estimation of total national emissions. AFS is undergoing a major redesign to support facility operating permits required under Title V of the Clean Air Act.

Hazardous Waste Summary:

. Waste code: D001
. Waste name: IGNITABLE WASTE

. Waste code: D002
. Waste name: CORROSIVE WASTE

. Waste code: D003
. Waste name: REACTIVE WASTE

. Waste code: D006
. Waste name: CADMIUM

. Waste code: D007
. Waste name: CHROMIUM

. Waste code: D035
. Waste name: METHYL ETHYL KETONE

. Waste code: D039
. Waste name: TETRACHLOROETHYLENE

. Waste code: F001
. Waste name: THE FOLLOWING SPENT HALOGENATED SOLVENTS USED IN DEGREASING: TETRACHLOROETHYLENE, TRICHLORETHYLENE, METHYLENE CHLORIDE, 1,1,1-TRICHLOROETHANE, CARBON TETRACHLORIDE AND CHLORINATED FLUOROCARBONS; ALL SPENT SOLVENT MIXTURES/BLENDS USED IN DEGREASING CONTAINING, BEFORE USE, A TOTAL OF TEN PERCENT OR MORE (BY VOLUME) OF ONE OR MORE OF THE ABOVE HALOGENATED SOLVENTS OR THOSE SOLVENTS LISTED IN F002, F004, AND F005; AND STILL BOTTOMS FROM THE RECOVERY OF THESE SPENT SOLVENTS AND SPENT SOLVENT MIXTURES.

. Waste code: F003
. Waste name: THE FOLLOWING SPENT NONHALOGENATED SOLVENTS: XYLENE, ACETONE, ETHYL ACETATE, ETHYL BENZENE, ETHYL ETHER, METHYL ISOBUTYL KETONE, N-BUTYL ALCOHOL, CYCLOHEXANONE, AND METHANOL; ALL SPENT SOLVENT MIXTURES/BLENDS CONTAINING, BEFORE USE, ONLY THE ABOVE SPENT NONHALOGENATED SOLVENTS; AND ALL SPENT SOLVENT MIXTURES/BLENDS CONTAINING, BEFORE USE, ONE OR MORE OF THE ABOVE NONHALOGENATED SOLVENTS, AND A TOTAL OF TEN PERCENT OR MORE (BY VOLUME) OF ONE OR MORE OF THOSE SOLVENTS LISTED IN F001, F002, F004, AND F005; AND STILL BOTTOMS FROM THE RECOVERY OF THESE SPENT SOLVENTS AND SPENT SOLVENT MIXTURES.

. Waste code: F005
. Waste name: THE FOLLOWING SPENT NONHALOGENATED SOLVENTS: TOLUENE, METHYL ETHYL KETONE, CARBON DISULFIDE, ISOBUTANOL, PYRIDINE, BENZENE, 2-ETHOXYETHANOL, AND 2-NITROPROPANE; ALL SPENT SOLVENT MIXTURES/BLENDS CONTAINING, BEFORE USE, A TOTAL OF TEN PERCENT OR MORE (BY VOLUME) OF ONE OR MORE OF THE ABOVE NONHALOGENATED SOLVENTS OR THOSE SOLVENTS LISTED IN F001, F002, OR F004; AND STILL BOTTOMS FROM THE RECOVERY OF THESE SPENT SOLVENTS AND SPENT SOLVENT MIXTURES.

. Waste code: F006
. Waste name: WASTEWATER TREATMENT SLUDGES FROM ELECTROPLATING OPERATIONS, EXCEPT FROM THE FOLLOWING PROCESSES: (1) SULFURIC ACID ANODIZING OF ALUMINUM;

Map ID	Site	Database(s)	EPA ID Number

KOLLMORGEN INLAND MOTOR (Continued) **1000289989**

(2) TIN PLATING ON CARBON STEEL; (3) ZINC PLATING (SEGREGATED BASIS) ON CARBON STEEL; (4) ALUMINUM OR ZINC-ALUMINUM PLATING ON CARBON STEEL; (5) CLEANING/STRIPPING ASSOCIATED WITH TIN, ZINC, AND ALUMINUM PLATING ON CARBON STEEL; AND (6) CHEMICAL ETCHING AND MILLING OF ALUMINUM.

. Waste code: F007
. Waste name: SPENT CYANIDE PLATING BATH SOLUTIONS FROM ELECTROPLATING OPERATIONS.

. Waste code: F009
. Waste name: SPENT STRIPPING AND CLEANING BATH SOLUTIONS FROM ELECTROPLATING OPERATIONS IN WHICH CYANIDES ARE USED IN THE PROCESS.

Environmental Interest/Information System

AFS (Aerometric Information Retrieval System (AIRS) Facility Subsystem) replaces the former Compliance Data System (CDS), the National Emission Data System (NEDS), and the Storage and Retrieval of Aerometric Data (SAROAD). AIRS is the national repository for information concerning airborne pollution in the United States. AFS is used to track emissions and compliance data from industrial plants. AFS data are utilized by states to prepare State Implementation Plans to comply with regulatory programs and by EPA as an input for the estimation of total national emissions. AFS is undergoing a major redesign to support facility operating permits required under Title V of the Clean Air Act.

AIR EMISSIONS CLASSIFICATION UNKNOWN

Map ID	Site	Database(s)	EPA ID Number

KOLLMORGEN INLAND MOTOR (Continued) **1014847660**

US EPA TRIS (Toxics Release Inventory System) contains information from facilities on the amounts of over 300 listed toxic chemicals that these facilities release directly to air, water, land, or that are transported off-site.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Environmental Interest/Information System

AFS (Aerometric Information Retrieval System (AIRS) Facility Subsystem) replaces the former Compliance Data System (CDS), the National Emission Data System (NEDS), and the Storage and Retrieval of Aerometric Data (SAROAD). AIRS is the national repository for information concerning airborne pollution in the United States. AFS is used to track emissions and compliance data from industrial plants. AFS data are utilized by states to prepare State Implementation Plans to comply with regulatory programs and by EPA as an input for the estimation of total national emissions. AFS is undergoing a major redesign to support facility operating permits required under Title V of the Clean Air Act.

Pipe Materials: Other Note	Not reported

Facility ID:	2014151
Federally Regulated:	Yes

Tank Number:	2
Tank Capacity:	8000
Tank Contents:	GASOLINE
Tank Status:	**PERM OUT OF USE**
Tank Type:	UST

Tank Material:

Install Date:	Not reported
Tank Materials: Bare Steel	Yes
Tank Materials: Cath Protect Steel	No
Tank Materials: Epoxy Steel	No
Tank Materials: Fiberglass	No
Tank Materials: Concrete	No
Tank Materials: Composite	No
Tank Materials: Double Walled	No
Tank Materials: Lined Interior	No
Tank Materials: Excav Liner	No
Tank Materials: Insulated Tank Jacket	No
Tank Materials: Repaired	No
Tank Materials: Unknown	No
Tank Materials: Other	No
Tank Materials: Other Note	Not reported

Map ID	Site	Database(s)	EPA ID Number

FORMER NEW RIVER SHOPPING CENTER (Continued) **U003676268**

Release Detection:

Tank Release Detection: Leak Deferred	No
Tank Release Detection: Manual Gauge	No
Tank Release Detection: Auto Gauge	No
Tank Release Detection:Tank Tightness	No
Tank Release Detection: Vapor Monitor	No
Tank Release Detection: Inventory	No
Tank Release Detection: Stat Invent Recon	No
Tank Release Detection: Spill Install	No
Tank Release Detection: Overfill Install	No
Tank Release Detection: Groundwater	No
Tank Release Detection: Int Sec Containment	No
Tank Release Detection: Int Double Walled	No
Tank Release Detection: Other Method	No
Tank Release Detection: Other Note	Not reported
Pipe Release Detection: Leak Deferred	Not reported
Pipe Release Detection: Autoleak	Not reported
Pipe Release Detection: Line Tightness	No
Pipe Release Detection: Stat Invent Recon	No
Pipe Release Detection: Groundwater	No
Pipe Release Detection: Int Sec Containment	No
Pipe Release Det: Interior Double Walled	No
Pipe Release Detection: Other Method	No
Pipe Release Detection: Other Note	Not reported

Pipe Type:	UNKNOWN
Pipe Materials: Bare Steel	No
Pipe Materials: Galvanized Steel	Yes
Pipe Materials: Copper	No
Pipe Materials: Fiberglass	No
Pipe Materials: Cath Protect	No
Pipe Materials: Double Walled	No
Pipe Materials: Sec Containment	No
Pipe Materials: Repaired	No
Pipe Materials: Unknown	No
Pipe Materials: Other	No
Pipe Materials: Other Note	Not reported

Facility ID:	2014151
Federally Regulated:	Yes
Tank Number:	3
Tank Capacity:	4000
Tank Contents:	GASOLINE
Tank Status:	**PERM OUT OF USE**
Tank Type:	UST

Tank Material:

Install Date:	7/2/1984
Tank Materials: Bare Steel	Yes
Tank Materials: Cath Protect Steel	No
Tank Materials: Epoxy Steel	No
